## BANKING, FINANCE AND CREDIT

## THE "MACMILLAN" REPORT

APPOINTED in November, 1929, "to inquire into banking, finance and credit, paying regard to the factors both internal 1 and international which govern their operation, and to make recommendations calculated to enable these agencies to promote the development of trade and commerce and the employment of the development of trade and commerce and the employment onmittee on Finance and Industry under the Chairmanship of Lord Macmillan issued its REPORT in August, IO3I

Shortly after the Macmillan issued its REPORI in August, 193I.
Shortly arter the appearance of the Report the financial crisis directed special attention to its contents and revealed to many in
conclusive fashion how fundamentally important to the efficient functioning of modern economic society were the subjects confunctioning of modern ec
sidered by the Committee.

Presenting as it does, a review of the varying factors in a complex economic system, the report will have an enduring value not only for students and specialists, to whom it will appeal as a compact and penetrating summary of the best modern thought in their field, but for non-specialist readers also by reason of the clarity and conciseness of its exposition. Sir Josiah Stamp, who himself gave evidence before the Committee, has said of the Report:-

To the patient ordinary reader there is more here of
intelligible exposition than can be found anywhere else, and the
Report is easily the best up-to-date text-book on the financial system.
The description of the current working of the Bank of England and Joint Stock Banks, the Accepting Houses, and of the discount market is exceedingly well done and will form the basis of educational work for many years to come..... In the concluding section of the expository part. "The Influence of Monetary policy on the Price Level" the Report breaks ground which is quite new in banking literature.'
The Committee took evidence from a large number of witnesses during the course of its work, among whom, in addition to representatives of the Bank of England, other joint stock banks, trade associations and similar bodies were Professor A. L. Bowley, Professor Henry Clay, Mr. R. G. Hawtrey, Sir Robert Kindersley, Sir Otto Niemeyer, Professor A. C. Pigou, Mr. D. H. Robertson and Sir Henry Strakosch. What they have said upon the problems discussed has now been printed in two large volumes. It will be evident that for students of economic subjects the Evidence will be no less indispensable than the Report itself.
