VOORWOORD.

Hierdie verslag is die sewende in die 1960-bevolkingsensus (steekproeftabellasië) -reeks.^{1/} Dit handel oor die onderwys-peil van al die rasse van die bevolking. Die inligting word getoon volgens provinsies en vir Blankes en Bantoes ten opsigte van elk van die 51 ekonomiese streke. Aangesien die syfers vir Kleurlinge, Asië en Bantoes in sommige streke egter klein is, is sodanige streke se syfers saamgetel.

Die bevolkingsyfers vir streke Nos. 40, 41 en 49 soos in hierdie en vorige steekproefverslae getoon, verskil in mate van dié wat in Tabel 10 van Boekdeel I van die 1960-sensusverslag gepubliseer is. Die verskil is te wyte aan die feit dat sekere stedelike gebiede wat binne twee of meer landdrostdistrikte geleë is vir die doel van Boekdeel I van bogenoemde verslag weer by die moederdistrik gevoeg is. Die syfers in hierdie en vorige verslae is egter streng volgens landdrostdistrikte en enige gedeelte van 'n dorp in 'n distrik is by daardie distrik se syfers ingesluit. Verder is die totale Bantoebevolking van Suid-Afrika, die Kaapprovinsie en van Streek 21, soos aangetoon in al die steekproeftabellasië, 20,133 minder as die finale syfers wat in Boekdeel I van die volledige sensus aangegee word. Hierdie verskil is te wyte aan die feit dat nadat die steekproeftabellasië voltooi is die finale syfers hersien is deur die toevoeging van 20,133 Bantoes.

Andersins is die totale bevolking van elke streek en derhalwe ook dié van die provinsies en Suid-Afrika, volgens ras en geslag, die werklike sensussyfers wat uit die volledige sensus verkry is.

Die steekproefsyfers vir die verskillende eienskappe is verhoudingsgewys aangepas om met die werklike syfers ooreen te stem.

PREFACE.

This is the seventh report in the 1960 Population Census (sample tabulation) series.^{1/} It deals with the level of education of all races of the population. The information is shown according to provinces and for Whites and Bantu in respect of each of the 51 economic regions. As the figures for Coloureds, Asiatics and Bantu in certain regions are, however, small, such regions have been combined.

The population figures for regions Nos. 40, 41 and 49 shown in this and previous sample reports differ slightly from those published in Table 10 of Volume I of the 1960 census report. This is due to the fact that some urban areas fall in two or more magisterial districts and these have in Volume I of the abovementioned report been transferred back to the parent district. The figures in this and previous reports, however, are based strictly on magisterial districts and any portion of a town in a district is included in that district's figures. Furthermore, the total Bantu population of South Africa, of the Cape Province and Region 21, as shown in all the sample tabulations, is 20,133 less than the final figures shown in Volume I of the complete census. These differences are due to the fact that after the sample tabulation had been completed, the final figures were revised by the addition of 20,133 Bantu.

In all other cases the total population of each region, and therefore of the provinces and South Africa, according to race and sex, are the actual census figures obtained from the complete census.

The sample figures for the various characteristics have been proportionally adjusted to agree with the actual figures.

PRETORIA.

NOVEMBER 1964.

H.M. STOKER.

DIE STEEKPROEF.

(i) Inleiding: 'n Sistematiese steekproef, met ewekansige beginpunte, bestaande uit tien persent van die Blanke, Kleurling- en Asiaatbevolking en vyf persent van die Bantoebevolking, is uit die sensusopgawes vir tabellering gekies. In gevalle waar gesinne of persone op enkelvorms (hoofsaaklik huishoudings of gesinne, vorm B.1 en B.2) opgeneem is, is elke tiende of twintigste vorm gekies; terwyl in alle ander gevalle, bv. waar enkelpersone in inrigtings in boeke opgeneem is, is elke tiende of twintigste persoon gekies.

(ii) Toets van steekproef: Op grond van beskikbare syfers uit die volledige sensus verkry, is die steekproef ten opsigte van elke ras vir elke opnemersgebied, asook ten opsigte van ras en geslag vir elke landrosdistrik, getoets. Daar was ongeveer 16,000 opnemersgebiede wat 280 landrosdistrikte omvat. Die toetse het getoon dat die resultate uit die steekproef verkry, wat ras en geslag betref, in die verwagte mate, binne die gestelde betroubaarheidsgrense geval het.

(iii) Steekproeffoute: By resultate uit steekproewe verkry, moet rekening gehou word met moontlike foute wat kan voortspruit uit die feit dat die eienskappe of waardes wat op die geheel betrekking het, geraam word uit 'n gedeelte van die geheel (in die geval van hierdie verslag, 'n steekproef van 5 of 10 persent). Die waardes of eienskappe wat geraam moet word, varieer van een individu tot 'n ander en hierdie variasie is 'n bron van foute in die totale uit die steekproef geraam. By ewekansige steekproefneming is dit moontlik om die foute wat uit hierdie bron vermag kan word, te bereken en om die grense waarbinne die bevolkingswaardes sal val, met 'n gegewe waarskynlikheid te bepaal. Dit is duidelik dat hoe kleiner die steekproef is, hoe groter die steekproeffout sal wees en ook dat die steekproeffout verband hou met die variabiliteit van die waardes of eienskappe wat hier in oënskou geneem word. Klein steekproewe ten opsigte van hoogs veranderlike waardes of eienskappe wat 'n klein verhouding van die geheel uitmaak, sal dus groot steekproeffoute toon (kyk na voorbeelde om die gebruik van die tabel van steekproeffoute toe te lig).

(iv) Steekproeffoute vir verskillende verhoudings en steekproefgroottes: In Tabel O.0 word die steekproeffoute vir verskillende steekproefgroottes en vir verskillende verhoudings van die bevolking vir 'n bepaalde eienskap gegee. Hierdie steekproeffoute kan met 'n 95-persent-betroubaarheid gebruik word, die wil sê in 95 gevalle uit 100 sal die foute nie groter wees as dié wat in die tabel verstrek is nie. Die betroubaarheidswaarskynlikheid kan tot ongeveer 99½ persent verhoog word deur die steekproef-foute met 50 persent te vermeerder. Die steekproeffoute sal nie streng van toepassing wees op die soort steekproef waarop die resultate in hierdie verslag gebaseer is nie, dit wil sê 'n sistematiese trossstekproef (gesinne of huishoudings) uit die bevolking, of op klein steekproewe en klein verhoudings, maar word as bevredigende benaderings beskou wat vir die meeste praktiese doeleindes gebruik kan word.

Tabel O.0 in hierdie verslag verskil van die ooreenstemmende Tabel O.0 in verslae No. 1 tot 4 wat reeds gepubliseer is. Tabel O.0 in verslae No. 1 tot 4 is spesifiek van toepassing op 'n 10-persentsteekproef, terwyl Tabel O.0 in hierdie verslag algemeen van toepassing is op klein steekproewe. Die verskille tussen die twee tabelle is egter gering.

(v) Voorbeeld om die gebruik van Tabel O.0 te verduidelik: Gevra om die steekproeffout van die getal Blankes in Suid-Afrika in die ouderdomsgroep 20-24 wat st. 10 as hoogste skoolstanderd geslaag opgegee het, (73,812 in die tabel hieronder) te vind en die grense waarbinne die juiste waarde sal val, met 'n betroubaarheid van 95 persent.

Tabel 1.3 toon die volgende vir Suid-Afrika vir ouderdomsgroep 20-24:-

Blankes - ouderdomsgroep 20-24 jaar.

<u>Hoogste skoolstanderd geslaag.</u>	<u>Suid-Afrika.</u>	
	<u>Getal</u>	<u>Persent</u>
Geen	901	-
Sub. A & B	50	-
St. 1 & 2	358	-
St. 3 & 4	1,206	1
St. 5	2,749	1
St. 6	29,398	13
St. 7	32,837	14
St. 8	74,634	32
St. 9	14,890	6
St. 10	73,812	32
Ongespesifiseer	<u>3,110</u>	<u>1</u>
Totaal	<u>233,945</u>	<u>100</u>

Die syfer 73,812 is 32 persent van die totaal van 233,945. Die steekproeffout getoon in die 30-persentkolom (naaste aan 32 persent) van die tabel teenoor 'n totale bevolkingsyfer van 250,000 (naaste aan 233,945) is 1.9 persent. Die steekproeffout van die syfers 73,812 is derhalwe ongeveer 1.9 persent van 73,812, dit is 1,402 en met betroubaarheid van 95 persent kan gesê word dat die getal persone betrokke binne die grense $73,812 \pm 1,402$ val, dit is tussen 72,410 en 75,214.

Die getal persone wat standerd 5 as hoogste skoolstanderd geslaag het (2,749 persone hierbo getoon), maak 'n klein persentasie van die totaal uit, naamlik 1 persent en die steekproeffout sal relatief baie groter wees, en die betroubaarheids-grense aansienlik wyer. Die tabel toon dat vir 'n verhouding van 1 persent en 'n totale bevolkingsyfer van 250,000, die persentasie fout ongeveer 12.6 persent is, en derhalwe sal die getal persone wat standerd 5 as hoogste skoolstanderd geslaag het tussen $2,749 \pm 346$, dit is tussen 3,095 en 3,403, val.

Insgelyks kan die steekproeffoute en betroubaarheidsgrense ten opsigte van enige ander syfer in hierdie verslag getoon, uit Tabel O.0 bepaal word.

OPMERKINGS BY TABELLE.

1. Ekonomiese streke: Die syfers in die tabelle word aangegee volgens 51 ekonomiese streke soos aangedui op die kaart. Elke streek bestaan uit een of meer landrosdistrikte. In sommige gevalle waar syfers baie klein is, is ekonomiese streke saamgevat. Omdat die steekproefsyfers ten opsigte van baie landrosdistrikte gewoonlik te klein is vir enigsins betroubare gegewens vir die verskillende eienskappe, is besluit om slegs syfers vir ekonomiese streke te tabelleer en te publiseer. Selfs vir sommige van die ekonomiese streke getoon, is die syfers klein, en derhalwe sal die steekproeffout relatief groot wees. Die syfers vir hierdie streke word egter afsonderlik gepubliseer omdat sekere eienskappe in elk geval 'n groot verhouding van die totaal uitmaak en aantoon dat ander groepe, hoewel hulle steekproeffoute groot is, relatief onbelangrik is. Net so kan die steekproeffout, selfs vir provinsies en groot ekonomiese streke, taamlik groot wees ten opsigte van eienskappe wat slegs 'n klein persentasie van die totale bevolking uitmaak. In elk geval kan die steekproeffout met behulp van Tabel O.0 bepaal word. Daarbenewens is die syfers vir die totale bevolking vir elke streek volgens geslag, werklike syfers uit die volledige sensus verkry en dus nie geraamde syfers nie.

2. Onderwyspeil:

- (i) Dit is belangrik dat daarop gelet moet word dat die vraag oor "onderwyspeil" uit twee dele bestaan. Die eerste gaan oor die hoogste skoolstanderd waarin geslaag is, en die tweede oor grade en/of diplomas of gedeeltes daarvan verwerf. Minder besonderhede is op die steekproefbasis getabelleer as wat beskikbaar sal wees uit die volle tabellasië van die sensus en gevolglik toon die tabelle slegs (a) hoogste skoolstanderd geslaag en (b) grade, en/of diplomas of gedeeltes daarvan verwerf. Kombinasies van (a) en (b) is nie gemaak nie behalwe in die geval van Tabele 1.1.1 en 1.1.2. Waar daar dus syfers getoon word vir "hoogste skoolstanderd geslaag" sluit dit persone met "grade en/of diplomas of gedeeltes daarvan" in.
- (ii) Daar moet ook op gelet word dat die gegewens in hierdie verslag betrekking het op die totale bevolking en nie net op die skoolgaande bevolking nie.
- (iii) Waar "onderwyspeil" met "ouderdom" gekombineer word, moet in gedagte gehou word dat die gegewens verwys na die toestand soos op 'n sekere tyd, naamlik 6 September 1960. Dit beteken dat die ouderdomme soos opgegee, betrekking het op die ouderdom van persone soos op hulle verjaardae voor 7 September 1960, en dat die hoogste skoolstanderd geslaag, verwys na die standerd geslaag soos op 6 September 1960, en nie na die standerd waarin die persoon op 6 September 1960 was nie.
- (iv) Die besonder hoë syfer vir onderwyspeil "ongespesifiseer" moet toegeskryf word aan foutiewe vertolking van die vraag, veral deur persone wat nog op skool was ten tye van die sensus, wat gevolglik die vraag oor "hoogste skoolstanderd geslaag" nie beantwoord het nie.
- (v) Daar dien op gelet te word dat sommige inligting soos verstrek op die sensusvorms soms oënskynlik foutief was deurdat dit nie gerym het met ander inligting op die vorm nie. Die ongerymhede is nie in alle gevalle deur die Buro opgeklaar nie en sommige van hulle word weerspieël in tabelle soos dié waar beroep en onderwyspeil gekombineer word (Tabelle 1.1.1 en 1.1.2). Byvoorbeeld, die tabel toon ingenieurs met slegs standerd 6, 7, 8 of 9.

3. Afkortings en simbole gebruik:-

- St. - standerd
- Ongesp. - ongespesifiseer
- - nul
- - 'n minusteken voor 'n syfer beteken "minder as", byvoorbeeld -20 beteken minder as 20.
- + - 'n plussteken na 'n syfer beteken "en oor", byvoorbeeld 65+ beteken 65 en oor.

THE SAMPLE.

- (i) Introduction: A systematic sample, with random starting points, consisting of ten per cent of the White, Coloured and Asiatic population and five per cent of the Bantu population, was selected from the census schedules for tabulation. In cases where families or persons were enumerated on single forms (essentially comprising the household or family form B.1 and B.2) each tenth of twentieth form was selected, while in all other cases, for example where single persons in institutions were enumerated in books, each tenth or twentieth person was selected.
- (ii) Testing of sample: On the basis of available figures obtained from the complete census, the sample was tested in respect of each race for each enumerator's area as well as in respect of race and sex for each magisterial district. There were almost 16,000 enumerator's areas covering 280 magisterial districts. The tests revealed that the results obtained from the sample tabulation, in so far as race and sex were concerned, fell, to the expected extent, within the required confidence limits.
- (iii) Sampling errors: In results obtained by means of sampling, allowance has to be made for possible errors arising from the fact that the characteristics or values pertaining to the whole are estimated from a part of the whole (in this case from a

sample of 5 or 10 per cent). The values or characteristics to be estimated vary from one individual to another, and this variation is a source of error in the aggregates estimated from the sample. In random sampling it is possible to calculate the error to be expected from this source and to determine the limits within which the population values will lie, with a given probability. It is clear that the smaller the sample, the larger the sampling error will be, and also that the sampling error is related to the variability of the values or characteristics considered. The results obtained from small samples in respect of highly variable values or characteristics which comprise a small proportion of the total will have large sampling errors (see examples to illustrate use of table of sampling errors).

(iv) Sampling errors for various proportions and sample sizes: In Table O.0 the sampling errors for various sizes of sample and for different proportions of the population for any particular characteristic, are shown. These sampling errors can be used with a confidence of 95 per cent, that is in 95 cases out of 100 the errors will not be larger than those shown in the table. The confidence probability can be increased to approximately 99½ per cent by increasing the sampling errors by 50 per cent. The sampling errors would not apply strictly to the type of sample on which the results in this report are based, that is a systematic sample of clusters (families or households) of the population or to small samples and small proportions, but are considered to be satisfactory approximations which can be used for most practical purposes.

Table O.0 in this report differs from the corresponding Table O.0 in reports No. 1 to 4 published previously. Table O.0 in reports No. 1 to 4 is applicable specifically to a 10 per cent sample, while Table O.0 in this report applies generally to small samples. The differences between the two tables are, however, small.

(v) Example to illustrate use of Table O.0: Required to find the sampling error of the number of Whites in South Africa in the age group 20-24 who passed std. 10 as the highest school standard (73,812 in table below) and the limits within which the true value will lie, with 95 per cent confidence.

Table 1.3 shows the following for South Africa for age group 20-24:-

<u>Highest school standard passed.</u>	<u>Whites - Age Group 20-24.</u>	
	<u>Number</u>	<u>Percentage</u>
No standard	901	-
Sub. A & B	50	-
Std. 1 & 2	358	-
Std. 3 & 4	1,206	1
Std. 5	2,749	1
Std. 6	29,398	13
Std. 7	32,837	14
Std. 8	74,634	32
Std. 9	14,890	6
Std. 10	73,812	32
Unspecified	<u>3,110</u>	<u>1</u>
Total	<u>233,945</u>	<u>100</u>

The figure 73,812 is 32 per cent of the total of 233,945. The sampling error shown in the 30 per cent (nearest to 32 per cent) column of the table against a total population of 250,000 (nearest to 233,945) is 1.9 per cent. The sampling error of the figure 73,812 is, therefore, approximately 1.9 per cent of 73,812, that is 1,402, and with 95 per cent confidence it can be stated that the number of persons concerned lies between the limits $73,812 \pm 1,402$, that is between 72,410 and 75,214.

The number of persons who passed Standard 5 as the highest school standard, (2,749 persons shown above) comprises a small proportion, namely 1 per cent of the total, and the sampling error will be relatively much larger and the confidence limits much wider. The table shows that for a proportion of 1 per cent and a total population of 250,000, the percentage error is approximately 12.6 per cent and, therefore, the number of persons who passed Standard 5 as the highest school standard lies between $2,749 \pm 346$, that is between 3,095 and 2,403.

Similarly, the sampling errors and confidence limits in respect of any other figure shown in this report, may be obtained from Table O.O.

NOTES TO TABLES.

1. Economic regions: The figures in the tables are given according to 51 economic regions as indicated on the map. Each region consists of one or more magisterial districts. In some cases where figures are very small, economic regions have been combined. As the sample figures for many magisterial districts are generally considered to be too small to yield anything like reliable data for the various characteristics, it was decided to tabulate and publish figures relating to economic regions only. Even in the case of some of the economic regions shown, the figures are small and the sampling error will therefore be relatively large. The figures for these regions are, however, published separately, because certain characteristics in any case form a large proportion of the total, indicating that other groups are relatively unimportant even though their sampling error may be large. Similarly the sampling error may be fairly large, even for the provinces and large economic regions, in respect of characteristics which comprise a small percentage of the total population. The sampling error can in any case be determined by referring to Table O.O. Furthermore, the figures for the total population of each region according to sex, are actual figures obtained from the complete census and are therefore not estimates.

2. Level of education:

(i) It is important to note that the question on "level of education" consists of two sections. The first deals with the highest school standard passed and the second with degrees and/or diplomas or portions thereof obtained.

Less detail has been tabulated on the sample basis than will be available from the full tabulation of the census.

As a result, the tables show only (a) highest school standard passed and (b) degrees and/or diplomas or portions thereof obtained. Combinations of (a) and (b) were not made, except for Tables 1.1.1 and 1.1.2. Figures for "highest school standard passed" thus include persons with degrees and/or diplomas or portions thereof.

(ii) It should also be noted that data in this report cover the whole population and not only the school-going section of the population.

(iii) Where cross tabulations of "level of education" and age are shown, it must be borne in mind that the data refer to the position as at a point of time, namely 6th September, 1960, this means that the ages given refer to the ages of persons on their last birthdays prior to 7th September, 1960, and that the highest school standard passed was the standard passed as at 6th September, 1960, and not the standard in which the person was as at 6th September, 1960.

(iv) The exceptionally high figure for level of education "unspecified" can be ascribed to an incorrect interpretation of the question, especially by persons still at school at the time of the census, who as a result did not reply to the question on "highest school standard passed".

(v) It should be noted that in certain cases the information furnished on the census forms was apparently incorrect in that it was inconsistent with other information on the form. These inconsistencies were not clarified in all cases by the Bureau, and some are reflected in tables such as those where level of education is combined with occupation, (Tables 1.1.1 and 1.1.2). For example, the table shows engineers with only standard 6, 7, 8 or 9.

3. Abbreviations and symbols used:-

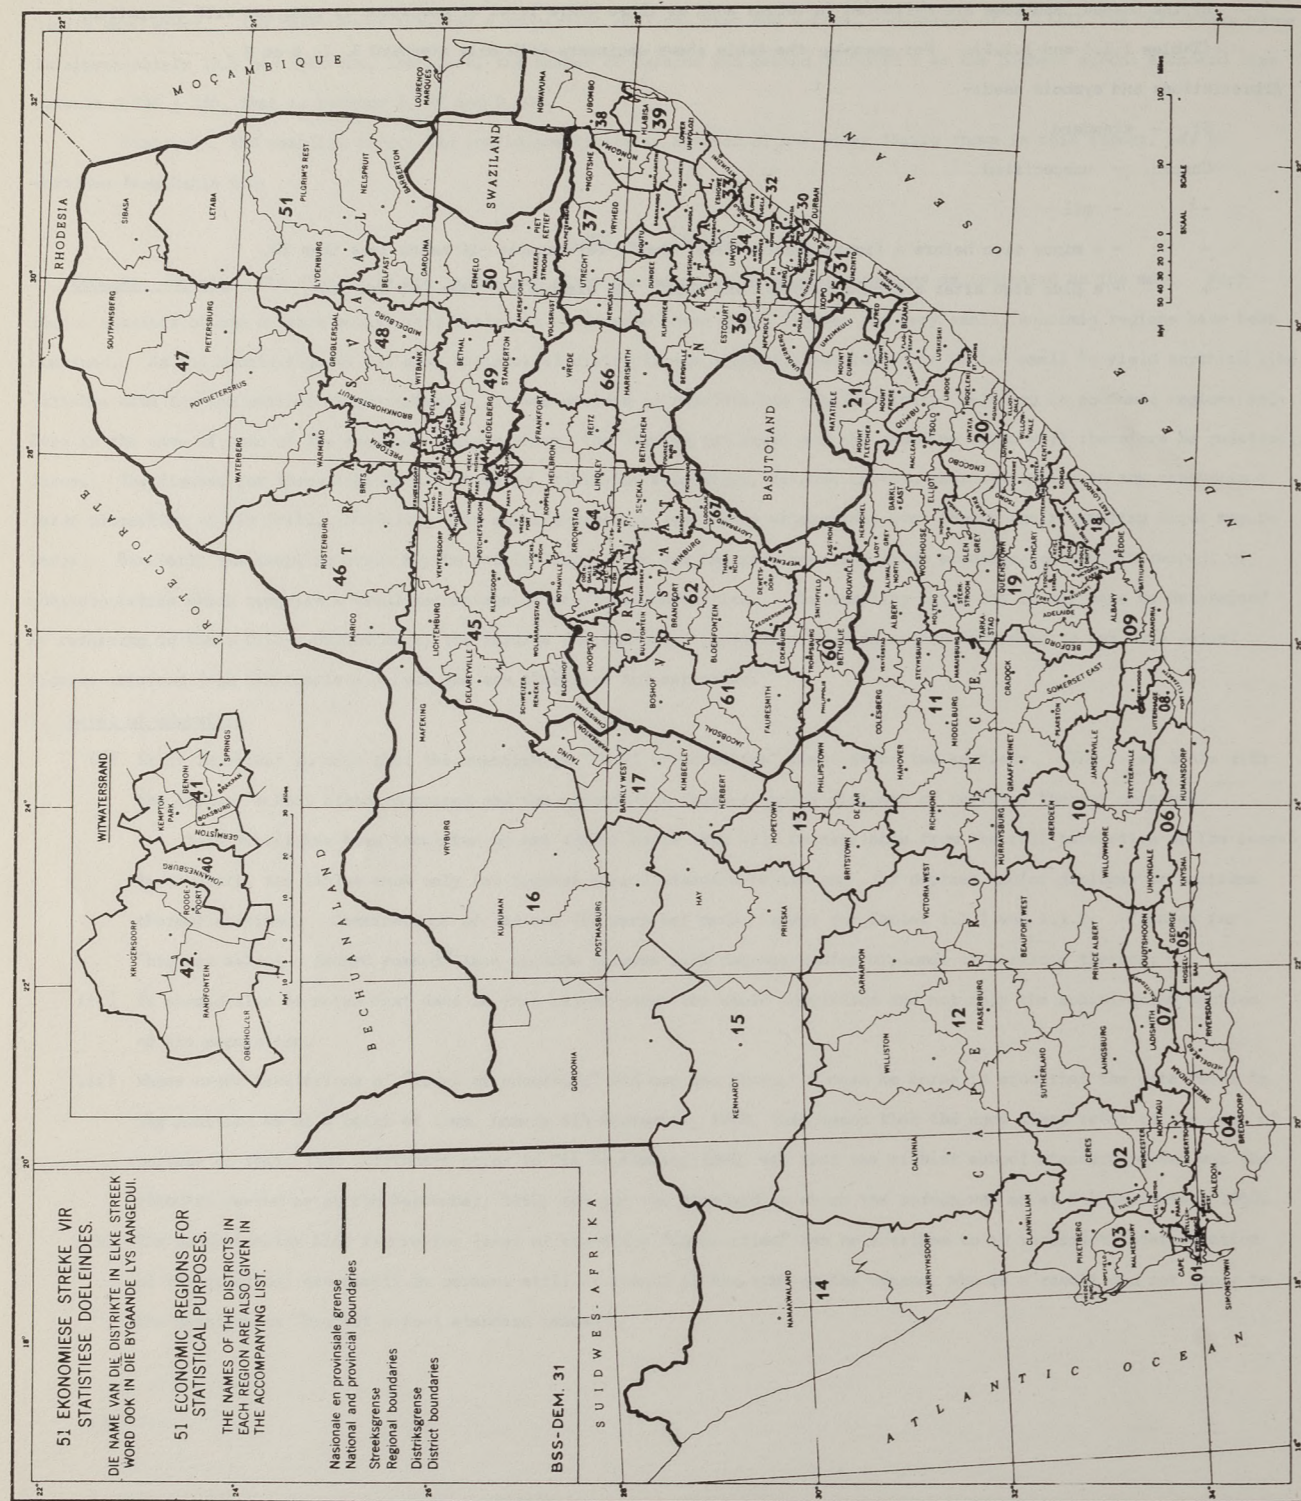

St. - standard

Unspec. - unspecified

- - nil

- - a minus sign before a figure denotes "less than", for example -20 means less than 20.

+ - a plus sign after a figure denotes "and over", for example 65+ means 65 and over.

51 EKONOMIESE STREKE VIR STATISTIESE DOELEINDES. DIE NAME VAN DIE DISTRIKTE IN ELKE STREEK WORD OOK IN DIE BYGANGDE LIS AANGEDUI.

51 ECONOMIC REGIONS FOR STATISTICAL PURPOSES. THE NAMES OF THE DISTRICTS IN EACH REGION ARE ALSO GIVEN IN THE ACCOMPANYING LIST.
