## EXPLANATORY NOTES

### 1. New or Recent Changes in Presentation

#### (a) Standard Regions, Conurbations, Density Summaries

All figures given for regions relate to the Standard Regions whose constitution is set out on page vii.

Six conurbation areas are distinguished in certain tables. For definition of "conurbation" and the list of conurbations, see Note 12 on page vii.

National density aggregates relate to aggregates of (a) conurbations, and (b) areas outside the conurbations, including separately :—Urban Areas with (i) populations of 100,000 and over, (ii) populations of 50,000 and under 100,000 and (iii) populations under 50,000; and Rural Areas. For this purpose "Urban Areas" includes Boroughs and Urban Districts as defined under the Local Government Acts, and "Rural Areas" comprises the Rural Districts as defined under those Acts.

#### (b) New Tables

A new series of tables has been introduced for the fertility analyses. Details are given in Note 4 (b) below.

In Appendix B are the results of an analysis of the marriages in 1952 by manner of solemnization, and of a count of cases where the register was signed by mark. Similar data were last published in the Statistical Review for 1934. It is proposed in future to repeat the analysis at five yearly intervals. Numbers and proportions, distinguishing civil marriages and fifteen groups of religious marriages, are given for England and Wales, Standard Regions and Geographical Counties (Tables 1 and 2). Marriages in the Established Church and (separately) the Church in Wales, for the country as a whole and for Standard Regions, are classified by preliminaries to marriage (i.e. Licence, Bans etc.), while those taking place in registered buildings are classified according to denomination and whether attended by a registrar of marriages (Tables 3 and 4). A serial Table (Table 5) shows for England and Wales the numbers of civil and religious marriages and proportions per 1,000 total marriages for certain years during the period 1844 to 1952.

### 2. Populations

The estimates of population appearing in Tables A1, A2, A3, A4, E, Appendix A (iii) and Appendix B (Table 1) and described as "Home" or "Total" populations, have the following content :—

*Home population*—the population, of all types, actually located within England and Wales, distributed by area according to residence.

*Total population*—the home population plus members of H.M. Forces belonging to England and Wales and serving overseas but excluding members of the Armed Forces of the Commonwealth or Foreign Countries temporarily in the country.

This definition also applies to the Total Population in the corresponding volume for 1951 and should be substituted for the definition which appeared therein.

In preparing the mid-1951 and mid-1952 estimates, regard has been had to the first results of the 1951 Census.

### 3. Births

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which occurred during the period. The numbers registered in 1952 are shown in the footnote to Table B.

For the classification by regions and local areas (Table E), the births have been assigned to the home address or area of permanent residence as in previous years.

### 4. (a) Birth Rates

The national rates for 1952 shown in Tables C and D are obtained by relating birth occurrences to the *total* population, while the rates in Table E are based on birth occurrences and *home* populations (see Notes 2 and 3 above).

The birth rate areal comparability factors and the ratios of the local adjusted birth rates to the national rate shown in cols. 9 and 10 of Table E serve a similar purpose to those shown for death rates, as explained in Note 7 below. A commentary upon the factor and its use is given on page 131 of the Statistical Review, Text, Civil, 1946-1950. It should be borne in mind that at the time these factors were calculated, insufficient data were available to make adequate allowance for the changing sex-age structure of rapidly expanding areas, and in such areas these factors should not be taken as making more than a very rough and probably insufficient adjustment. It is hoped that in future Statistical Reviews the factors will in such cases be revised to allow more adequately for the character of the population accommodated in the new housing and for other relevant considerations.

### (b) Fertility Analyses

The fertility analyses in Tables AA-TT are based on information obtained under the Population (Statistics) Act, 1938, which operated from the 1st July, 1938. Tables AA to QQ and Table TT are based upon birth occurrences. Tables RR and SS are based upon death registrations.

A new Tabulation scheme has been adopted for 1952 and subsequent years, and a fresh series of Tables is introduced in this volume.

Tables AA to EE are, with a few modifications, similar to the corresponding tables in the previous series. Table FF (previously GG) now includes live and still birth rates per 1,000 legitimate maternities. Tables RR, SS and TT correspond to those previously designated VV, XX and YY. The former Table WW is discontinued.

A new Table (Table GG) shows birth rates by age of mother for Standard Regions, Conurbations and Density Aggregates; it also includes legitimacy, sex and stillbirth proportions which were formerly given in Table HH.

The analysis of legitimate maternities by mother's age, marriage duration and previous live-born children in Tables HH, II and LL, is confined to maternities to women married once only. Table MM relates to legitimate maternities to women married once only, distinguishing parity, age and year of marriage for successive marriage cohorts.

Tables JJ and NN show estimates of the numbers of married women (married once only) at risk of child bearing in the calendar year (a) according to age and duration of marriage and (b) according to age at marriage and year of marriage. There is a fundamental difference between the figures in these tables. Table JJ is required for the production of legitimate maternity rates *per year of risk* (shown in Table KK) and each married woman exposed to risk for a fraction of a year, only counts as this fraction. Table NN is required for the production of legitimate maternity rates *per married woman* (shown in Table OO) and each married woman exposed to risk at any time in the calendar year counts as a full unit. Table PP shows, average family size (live born children) at the end of 1952. This table has been compiled by adding to the family sizes at the end of the previous year, live birth rates derived from Table OO. The original base was provided by the 1946 Family Census, as extended by registration statistics to 31st December, 1951. The families recorded in the 1946 Family Census included some children born before marriage and, to prevent discontinuity, arbitrary adjustment for this feature has been made to the families of women married in 1946 and later.

In Tables AA, HH, II, LL and MM, the "not stated" cases have been proportionally distributed and included with the "stated" cases. Table QQ shows the numbers of cases so distributed and the proportions per 10,000 total legitimate maternities. Cases where the number of live born, now dead, children was not known by the informant at the registration of the birth have not been treated as "previous children not stated" since the current level of child mortality is sufficiently low to permit it to be assumed without risk of serious error that in these cases there were no such children.

### 5. Marriage Rates

The national marriage rates of Tables C and D are based upon *total* populations while the rates in Table F are based upon *home* populations (see Note 2 above).

### 6. Deaths

The deaths recorded (Tables E, RR and SS) are the total registered (i.e. including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. They have been assigned to the area of usual residence of the deceased.

### 7. Death Rates

The general death rates of Table E are based upon total deaths and home populations. The Infant Mortality rates for the local areas of Table E are based upon the combined births of the associated and preceding year to which they relate.

The crude death rates for local areas in Table E (col. 14) are not validly comparable by reason of the fact that the areal populations on which they are based may be of widely differing sex-age constitutions. With a view to eliminating this element of variation, a comparability factor is provided in column 15 of the table for each area and this, when multiplied by the crude death rate of the area, produces an adjusted rate which may be regarded as comparable with the corresponding adjusted mortality rate for any other area or with the crude death rate for England and Wales as a whole (where the comparability factor is unity). A guide to the relative incidence of mortality in different areas is provided by column 16 which expresses each local adjusted rate as a ratio of the national rate. For a fuller description of the comparability factor, reference should be made to the Statistical Review, Text, 1938/1939, page 5. (see also Note 4(a) above).

### 8. Register of Electors

The number of parliamentary electors for each parliamentary constituency, together with the number of votes cast at by-elections held on the March, 1952 Register, are set out in Table U. The numbers of local government electors are shown in Table V together with an analysis of local elections.

### 9. Changes in Boundaries

Areas which have undergone a change of boundary during the year are identified in Table E by an asterisk (\*). Statistics for these areas combine the "before change" and "after change" positions for the respective parts of the calendar year. Appendix A (iii), (page 174) shows the population of each area as constituted after the change of boundary, while column 2 of Table E shows the composite estimate used as a base for the birth and death rate calculations.

### 10. Significance Indication

Rates based upon less than 20 births or deaths are distinguished by italic type as a warning to the user that the smallness of the experiences may affect their significance.

### 11. Regions

The constitution of the Standard Regions of England and Wales used in this Volume is as follows :—

<b>REGION I. Northern.</b> Cumberland. Durham. Northumberland. Westmorland. Yorkshire, North Riding.	<b>REGION IV. Eastern.</b> Bedfordshire. Cambridgeshire. Ely, Isle of. Essex, Part of. Hertfordshire, Part of. Huntingdonshire. Norfolk. Suffolk, East. Suffolk, West.	<b>REGION VI. Southern.</b> Berkshire. Buckinghamshire. Dorset. Oxfordshire. Southampton. Wiltshire. ### 12. Conurbations

The conurbation areas used in this volume were agreed by an interdepartmental committee, representing the principal Departments preparing statistics, as a means of securing uniformity and comparability in statistics published by Government Departments in the United Kingdom.

Conurbation is the word used to describe those areas of urban development where a number of separate towns have grown into each other and become linked by such factors as a common industrial or business interest, or a common centre of shopping, education, etc. The conurbations are each made up of a collection of complete local authority areas, constituted as follows :—

\* These figures relate to passengers to and from ports in the Irish Republic and ports in the United Kingdom. The movement over the land frontier between the Irish Republic and Northern Ireland cannot be furnished.

† Approximate figures only.

†† Excluding air passengers prior to 1949.

‡ Excluding Air Passengers.

§ This figure cannot be reconciled with the separate totals because it includes air movement which cannot be allocated to specific areas.

(c) Balance of Permanent Migration; Citizens of the Commonwealth and the Irish Republic only (from Board of Trade Returns).

Outward balances are shown in Roman type, inward balances in Italics.

The United Kingdom excludes the Irish Republic as from the 1st April, 1923.

The criterion of Permanent Migration is a declared intention to reside for at least a year in the country of destination. The permanent migration of part (c) is included in the passenger movement of part (b) and relates to movement by sea only.

TABLE AA.—Maternities and Births of all Types,  
distinguishing legitimacy and, in the case of  
births, sex and whether live or stillborn.

England and Wales  
1952 Occurrences.

Note : The term "Maternity" is used to denote a pregnancy which has terminated in the birth of one or more live or stillborn child(ren), the criterion of stillbirth being that defined in the Births and Deaths Registration Act, 1926. The Maternity record differs from the Birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit.

TABLE II.—Legitimate Maternities to women married once only  
by mother's age at maternity and marriage duration.

{England and Wales  
1952 Occurrences.

Note : (i) The classification by marriage duration now presented differs from that of 1951 and earlier years. As the month only and not the day of the mother's marriage is obtained at a birth registration the marriage duration cannot be exactly identified. The assignment procedure is now designed to secure that numbers shown in the table correspond as nearly as possible to the durations to which they are assigned.

(ii) Cases in which the mother's age or year of marriage were not stated (see table QQ) have been proportionally distributed and included with the stated cases.

(a) Classification by marriage duration and maternity age in single years.

TABLE RR.—Infertility of Deceased Married Women distinguishing certain Causes of Death.

England and Wales  
1952 Registrations.

Note.—The columns distinguish deaths according to whether the deceased was reported

(a) as having had no children by any husband, i.e. Infertile,

(b) as having had children by a husband, i.e. Fertile.

Deaths in which the record of fertility was not reported are excluded from the table.

In view of the unreliability of inferences based upon small numbers, proportions based on less than 50 cases (Infertile plus Fertile) have been omitted, and proportions based on between 50 and 250 cases are shown in italics.

# Census 1951

## COUNTY REPORTS

These reports contain the definitive 1951 Census populations for Local Authority areas, wards, civil parishes, parliamentary constituencies and petty sessional divisions. Local populations are analysed by sex, age, marital condition, birth-place and nationality, numbers in full-time education, and social class.

The analysis of local housing conditions includes the number of dwellings, their size in rooms and size of households in occupation, and the household arrangements (viz. piped water, cooking stove, kitchen sink, watercloset, fixed bath) possessed by each household.
