The Registrar General's
Annual Estimates of the Population
of England and Wales
and of
Local Authority Areas

An annual publication issued to meet a general demand for the most recent figures of populations of local administrative area, county boroughs, administrative and geographical counties, the revised standard regions and conurbations. The latest estimates of the population of England and Wales as a whole, by sex, by single years of age to age 24 and by five-year age-groups thereafter, are also given.

Price 3s. 6d. (1969 edition). By post 3s. 10d.

Published by
HER MAJESTY'S STATIONERY OFFICE

and obtainable from the Government Bookshops in London (by post to P.O. Box 569, S.E.1),

1. The Abortion Act 1967, which came into effect on 27th April 1968, permits termination of pregnancy by a registered medical practitioner subject to certain conditions. Regulations made under the Act (The Abortion Regulations 1968, Statutory Instrument 1968 No. 390, in relation to England and Wales) require any such termination to be notified within seven days, in a form prescribed in Schedule 2 of the Regulations, to the Chief Medical Officer of the Department of Health and Social Security. By arrangement with that Department the Registrar General undertakes the statistical processing and analysis of the notification forms. This Supplement to his Statistical Review gives some statistics derived from them for England and Wales covering the period from 27th April to 31st December 1968. The following paragraphs set out the background of these statistics and the definitions used in compiling them.

2. Grounds for Legally Induced Abortion

The Act lays down that such an abortion must be

- (a) performed by a registered medical practitioner,
 - (b) performed, except in emergency, in a National Health Service Hospital or in a place for the time being approved for the purpose of the Act,
 - (c) certified by two registered medical practitioners as necessary on one or other of the grounds:

1. the continuance of the pregnancy would involve risk to the life of the pregnant woman greater than if the pregnancy were terminated.
 2. the continuance of the pregnancy would involve risk of injury to the physical or mental health of the pregnant woman greater than if the pregnancy were terminated.
 3. the continuance of the pregnancy would involve risk of injury to the physical or mental health of any existing children of the family greater than if the pregnancy were terminated.
 4. there is a substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped, or in emergency cases, certified by the operating practitioner as immediately necessary.
 5. to save the life of the pregnant woman, or
 6. to prevent grave permanent injury to the physical or mental health of the pregnant woman.

The above numbering of the grounds for termination appears in the notification form itself, and is used for brevity in the tables. Combinations of grounds are not infrequently recorded, and the tabulations distinguish two such: 2 and 4 together, and 3 with any others (usually 2 and/or 4). Where ground 1 is stated with any other, the case is treated as ground 1.

The Act also provides that in relation to grounds numbered above as 2 and 3 certifying practitioners may take account of the pregnant woman's actual or reasonably foreseeable environment.

3. Scope of data

The figures in these tables are derived from notification forms received up to the end of January 1969 relating to legally induced abortions which took place in England and Wales in the eight months four days from the commencement of the Act to the end of 1968; therapeutic abortions before 27th April 1968 in N.H.S. hospitals or elsewhere are not included.

The relative categories of the *International Classification of Diseases, Injuries, and Causes of Death, 8th Revision* (1965) are those numbered 640 (abortion induced for medical indications) and 641 (abortion induced for other legal indications).

Tables 2, 7-11, 14, 17, 18, 20 and 21, being primarily of demographic rather than medical interest, exclude abortions of women whose usual residence was stated to be outside England and Wales. These are shown in Table 15. The 1,309 cases in this table include 163 from other parts of the United Kingdom, Channel Islands and Isle of Man.

4. Rates

Tables 2a and b give annual abortion rates for England and Wales as a whole, and for standard regions and area aggregates, according to the declared usual residence of the woman. The denominator is the estimated population of women in the age-range 15-49 at mid-1968 multiplied by the factor 249/366. As population estimates by marital status for regions are not available, the regional rates are age-specific only.

5. Place of Termination

Except in emergency, abortion operations must be carried out in N.H.S. hospitals, in certain approved Services' hospitals, or in premises approved by the Secretary of State. At the end of 1968 there were 59 registered nursing homes which had received approval for an initial period up to 26th April 1969, and 13 approved Services' hospitals. In the tables these latter hospitals are included under the heading 'Other Places'.

In 1968 no operation was recorded as having been performed as an emergency, in places other than the three categories of premises mentioned.

6. Marital status

The categories of marital status distinguished on the notification form are (a) single (b) married (c) widowed (d) divorced or separated. Except in Tables 8, 10, 14 and 15, the relatively small categories (c) and (d) are combined for tabulation purposes.

7. Parity

The form requires the number of the woman's previous (a) live births (b) still-births (c) abortions to be stated. In Tables 7, 9, 11 and 16b analysis is by the number of previous live births, and in Tables 1d and 5 analysis is by the number of live and still births together. The answers under (c) are probably incomplete. Subject to any other information on the form, the absence of an answer under (a), (b) or (c) was assumed to mean 'nil'.

8. Type of Termination

Five main types of operation are listed on the form. Any other type should be specified. Where more than one type is shown on the form, in Table 13 and 16e the case is classified under the major type.

9. Gestation period

The form provides for a statement of the date of the last menstrual period as well as the date of operation. In accordance with international convention the gestation period is calculated as the number of completed weeks between these two dates. Where no exact date of l.m.p. is stated, a date is assumed, e.g. 'early April' becomes 7th April, 'third week June' becomes 22nd June. No date was stated in 2-4% of cases.

10. Duration of stay

Duration of stay in hospital or approved place is tabulated as the interval in days between date of admission and date of discharge (the latter actual or expected). An interval of 0 days means admission and discharge on the same date. As notification forms should be completed and forwarded within seven days of operation, the tabulated durations are limited at the upper end to '7 days and over'. A date of discharge was not stated and could not be inferred in 0.3% of cases.

11. Region of operation

Hospitals and approved places have been tabulated according to the hospital region in which they are situated, except that London teaching hospitals are shown as a separate group. The composition of hospital regions in terms of entire local government areas is set out in the Registrar General's Statistical Review from year to year, e.g. the 1968 volume, Part II, pages xxx-xxxiii.

12. Area of residence

Tables 2, 15, 17 and 18 are derived from the statement of the woman's usual address. Table 17 is limited to standard regions, conurbations, aggregates of types of area, and local government areas with a resident population of 100,000 or over. Figures for smaller areas are not provided in the interests of preserving confidentiality.

The composition of standard regions and conurbations is set out in the Registrar General's Statistical Review from year to year, e.g. the 1968 volume, Part II, pages xiv-xvii.

13. Sterilisation

Table 11 analyses by age and previous live-born children and occupation group those cases where sterilisation was performed in conjunction with the abortion operation. Where no answer was provided to the question, it was assumed that sterilisation was not performed unless the nature of the operation implied the opposite; all women who were stated to have had hysterectomy have been counted among those sterilised.

14. Occupation

The form asks for the woman's occupation, or that of her husband if she is married. Unfortunately, the information provided under this heading is often incomplete or too vague or general to permit reliable coding. However, in view of the sociological interest, an attempt has been made to analyse the data in terms of groups of occupations, whether of the woman or her husband, which correspond (to some extent) with conventional social classes used in various of the Registrar General's publications. Since, however, assessment of job status is not always possible, the classification is not strictly that of social class. These groups of occupations are:

Professional: e.g. doctors, civil engineers, architects.

Intermediate: e.g. shop proprietors, teachers, technicians.

Skilled: e.g. weavers, tailors, secretaries.

Semi-skilled: e.g. machine tool operators, farm workers.

Unskilled: e.g. dock labourers, kitchen hands.

Not classified: e.g. students, housewives, members of the armed forces, occupations inadequately described or not stated, unemployed.

15. Existing children

Table 10 analyses the data according to the number of existing children living in the woman's family. This means a woman's natural children and any adopted, foster or step-children up to the age of 16 years living with her.

16. Medical grounds

Questions 11(a) and (b) on the notification form ask about the medical condition of the woman in terms of any obstetric or non-obstetric disease found or reported, and any suspected medical condition of the foetus. The answers were coded according to the International Classification of Diseases, Injuries, and Causes of Death, 8th Revision (1965), slightly adapted to this particular context.

The large variety of medical conditions reported are aggregated into significant groups of the International Classification (ICD) code numbers and presented in **Table 19**. This shows numbers of conditions stated, and not numbers of cases.

17. Conditions associated with medical grounds

Question 11(c) on the notification form asks about non-medical grounds for termination, pursuant to the statutory provision that certifying practitioners may take account of "the pregnant woman's actual or reasonably foreseeable environment" in relation to statutory grounds 2 and 3. Apart from cases where the answer to this question mistakenly referred back to the statutory grounds (1.6% of the total), there were 4,042 cases (17%) where such circumstances were stated. These have been analysed in **Table 12** according to a classification which has necessarily been empirical, but which attempts to indicate the nature of such environmental factors as the practitioner has seen fit to record. Where more than one classifiable condition was stated, assignment was to the condition which appeared to be of major importance.

18. Complications or death

The question under this heading relates to the occurrence of complications or death prior to notification of an abortion. Notification should be made within seven days and the notifying doctor may not hear of complications or death occurring after the patient has been discharged from the place of operation. Deaths recorded on the forms totalled three. They took place in N.H.S. hospitals in the S.E. Metropolitan, S.W. Metropolitan, and East Anglian hospital regions, and related to married women aged 25, 38 and 39 years.

19. Provisional data

Current figures of legally induced abortions are published in the *Registrar General's Weekly and Quarterly Returns*. The Weekly Return periodically shows the provisional numbers of abortions notified in the preceding four or five weeks by (a) statutory grounds, age and marital status, and (b) hospital region and place of termination. The Quarterly Return shows similar figures consolidated for the relative quarter.

Some additional analyses of the 1968 provisional figures, with notes, appeared in Appendix L of the Quarterly Return for the quarter ended 31st December 1968.
