NOTE.—Since the Healthy District Life Table was constructed, a small error in Table R., Vol. I., has been found. The district of Hitchin, with a corrected death-rate of 15.48 per 1,000, had by an error in copying been included among districts with corrected death-rates ranging between 14 and 15 per 1,000. A calculation as to the probable effect of this error on the Life Table leads to the conclusion that the expectation of life is about $\frac{1}{1000}$ part less for males, and $\frac{2}{1000}$ part less for females, than it would have been had the list of districts been strictly limited to those with corrected rates under 15 per 1,000. Thus the Life Table is based on the experience of 262 districts with corrected death-rates below 15 per 1,000, and 1 district with a corrected death-rate of 15.48 per 1,000.
