

APPENDIX

PART I.

Illustrations of the method employed in the Calculations of the Rate of Mortality among the Population, living at different Ages, in the Divisions, Counties, and Districts of England.

The two upper sections of the tables commencing page 176, contain the population at each of 17 ages, enumerated as having slept in the respective districts on the night of June 6-7th, 1841; and the deaths registered at the same ages in the 7 years ending December 31st, 1844.

The lower section contains calculations based on the two upper sections. The year is taken for the unit of time; the fixed number living is 100; and the object of the tables is to show the average deaths in that time among persons of 15 and under 25, or among persons of any of the other ages set down in the tables. If the population had been stationary, a person of the same age being invariably substituted for every one removed by death or by any other cause, the division of the number of deaths in a year at a given age by the numbers living would exhibit the rate of mortality. The deaths in 7 years, divided by 7 times the living enumerated at any one time, would also give the mean annual rate of mortality, or the mortality, to one living. This rate multiplied by 100 is = the annual mortality per cent. The population in almost every district increased in the 7 years 1838-44; and this has to be taken into account in the calculation. If the population increased regularly in geometrical progression, the numbers living in the middle of the year 1841 represent the mean numbers living through the 7 years 1838-44; these numbers multiplied by 7 represent the lifetime in years out of which the deaths occurred. If the population increased in arithmetical progression, 7 times the number living in the middle of the year would also be the lifetime in years out of which the deaths occurred. Many deviations from this rule no doubt occurred, and the population at different ages probably increased at different rates. No error of any consequence can arise from assuming, as we do, that the population at each age increased at the same rate as it did in 1831-41, from June 6-7th to the middle of the year 1841, which may be set down as .07 year.

The census of 1831 was commenced May 30th, 1831; we assume the interval between the census of 1831-41 to be 10.0219 years, logarithm 1.0009501. There is some difficulty in comparing the male population of 1831 and 1841, as soldiers and sailors ashore were not enumerated in 1831, and were enumerated in 1841 in the district in which they happened to sleep. The rate of increase has therefore been deduced from the enumerated female population 1831-41; by the subjoined formulæ:—

$$f_{31} = \text{female population enumerated 1831.}$$

$$f_{41} = \text{female population enumerated 1841.}$$

$$\left(\frac{f_{41}}{f_{31}}\right)^{\frac{1}{10.0219}} = r = 1 + \text{annual rate of increase.}$$

$$\frac{\lambda f_{41} - \lambda f_{31}}{10.0219} = \lambda r;^a$$

$$\text{and } \lambda (\lambda f_{41} - \lambda f_{31}) - \lambda (10.0219) = \lambda (\lambda r).$$

^a λ is put for the logarithm, λ for the complement of the logarithm, in these formulæ.

And $.07 \lambda r = \lambda (1 + \text{rate of increase from June 7th to the middle of the year 1841}).$

The ages of a few of the living, and a few of the dying were not returned; the unreturned ages of persons may be assumed to be the same as those of persons whose ages were actually returned.

Let L = the living at all ages, June 6-7, 1841.

L' = the living whose ages were specified at the same date.

$7.D$ = the deaths in 7 years, 1838-44, at all ages.

$7.D'$ = the deaths in 7 years, 1838-44, at all specified ages.

l_x = the living in the middle of 1841, at any age x .

l'_x = the living enumerated at any age x on June 7th, 1841; and $r^{.07} l'_x$ = living that would have been specified at age x , if the census had been taken in the middle of the year 1841.

$7.d_x$ = the deaths in 7 years at any age x ; d_x = deaths at age x in 7 years divided by 7.

$7.d'_x$ = the deaths in 7 years specified at any age x .

m_x = the annual rate of mortality at age x .

Then $L' : L :: r^{.07} l'_x : l_x = \frac{L'}{L} \times r^{.07} \times l'_x$, the living at age x in the middle of 1841.

$$7.D' : 7.D :: 7.d'_x : 7.d_x = \frac{D \cdot 7.d'_x}{D' \cdot 7.d_x} = \text{the dying in 7 years at the age } x.$$

$$\text{And } \frac{D}{D'} \cdot d'_x = d_x$$

$$\frac{d_x}{l_x} = \frac{\frac{D}{D'} \cdot 7.d'_x}{7 \cdot \frac{L'}{L} \cdot r^{.07} l'_x} = \frac{L' \cdot D}{7 \cdot L \cdot D' \cdot r^{.07}} \times \frac{7.d'_x}{l'_x} = m_x = \text{the annual mortality}$$

per cent. at the age x .

This formula may be divided into two parts; and whatever the age x may be, the first part of the formula remains invariable. For the convenience of

calculation, therefore, put $\left(\frac{L' \cdot D}{7 \cdot L \cdot D' \cdot r^{.07}}\right) = z$

$$\lambda L' + \lambda D + \kappa 7 + \kappa L + \kappa D' + \kappa (r^{.07}) = \lambda z$$

Mode of expressing Age.—A person is said, in common language, to be of the age of 20 until he attain his next birth-day, and is 21. The persons referred to the age 20 are persons aged 20 years and 1 day, 2 days, 3 days, . . . 364 days. The ages of persons in a series of the following kind: under 5 years of age; 5 and under 10; 10 and under 15; 15 and under 25, &c., are conveniently expressed thus: 0—, 5—, 10—, 15—, 25—, 35—. The numbers against 5—, will also express the numbers of that age and under the age following in any series whatever.

Example of the way in which the rate of mortality at each age has been deduced in the following series of Tables:—

COUNTY OF SURREY.—MALES.

λD 12284	4.0893398
$\times D'$ 12271	5.9111200
$\times 7$	$\bar{1} 1549020$
$\times r^{.07}$	$\bar{1} 9995663$
$\lambda z =$	$\bar{1} 1474373$

Operation for obtaining the annual rate of increase of female population, 1831-41.

Total Female Population.	Numbers.	Logarithms.
$1841 = f_{41} = 93425$	$\lambda 4.9704631$	$1.0009501 = \lambda$ interval of time = $\lambda 10.0219$
$1831 = f_{31} = 80978$	$\lambda 4.9083670$	
$\lambda f_{41} - \lambda f_{31} = 0.0620961$	$\bar{1} 7930643$	$\lambda (\lambda f_{41} - \lambda f_{31})$
λr $\cdot 0061960$	$\bar{1} 7921142$	$\lambda (\lambda f_{41} - \lambda f_{31}) - \lambda 10.0219$
	$\cdot 07$	
$\lambda r^{.07}$ $\cdot 000433720$		
$\times r^{.07}$ $\bar{1} 999566280$		

The interval of time between the two censuses, May 30th, 1831, and June 6-7th, 1841, was taken at 10 years 7 days = 10.0219 , $\lambda 1.0009501$.

The calculations, without any correction for those whose ages were unspecified, or for increase of population, are all readily performed by common arithmetic; thus, the boys living in Surrey under the age of 5, in 1841, were 11718; the deaths of boys under the age of 5, in the 7 years 1838-44, were 3982, specified as at that age, or $\frac{3982}{7} = 569$ annually. To obtain the annual mortality per cent., we have by the rule of proportion :

$$11718 : 569 :: 100 : x = \frac{56900}{11718} = 4.855$$

or more correctly—

$$11718 : \frac{3982}{7} :: 100 : x = \frac{3982 \times 100}{7 \times 11718} = 4.855$$

$$11718 \left(\frac{56900}{46872} (4.855) ; \text{ and } \frac{82026}{328104} (4.855) \right)$$

100280	700960
93744	656208
65360	447520
58590	410130
67700	373900
58590	328104
9110	45796

The error is $4.855 - 4.772 = .083$; and is not 1.59th part excess. To obtain the annual mortality per cent. at all ages, as the total male population was 94443, and the deaths of males, in 7 years, were 12284, we have the proportion :

$$94443 : \frac{12284}{7} :: 100 : x = \frac{1228400}{661101} = 1.858$$

$661101 \left(\frac{1228400}{661101} (1.858) \right)$
5672990
5288808
3841820
3305505
5363150
5288808
74342

The error here is only $1.858 - 1.856 = .002$, and is quite insignificant, as the only point neglected is the increase of population from June 6-7 to the middle of the year 1841.

London Workhouses. The workhouse of the district of St. Luke is in Shore-ditch, the workhouse of the Strand is in Pancras, the workhouses of the City of London district are in Camberwell, and Stepney. In calculating the mortality of the respective districts, the deaths and population of these outlying workhouses were taken from those districts in which they happen to be situated, and placed in the districts to which the inmates belong. No other correction for workhouses is required, unless it is attempted to calculate the mortality of sub-districts. Then if the workhouse population, and the paupers who die, can be referred to their respective sub-districts, that is the proper course for determining the relative mortality of the sub-districts among themselves. The condition of the workhouse is an important element in the health of the district; and sub-districts supply the workhouse with paupers in very different proportions; but when the localities from which workhouse paupers come is unknown, no better *general* rule can be laid down than the following: distribute the deaths in the workhouse, at each age, over the several sub-districts, in the proportions of the deaths registered out of the workhouse in those sub-districts; distribute the population in the workhouse, at each age, over the several sub-districts, in the proportions of the population enumerated in those sub-districts; and then divide, as usual, the deaths by the living at corresponding ages.

London Hospitals. In deducing the mortality of the several London districts, the population and the deaths in the hospitals were subtracted from the population and deaths of the respective districts in which the hospitals happened to be situated.—(See Tables, in 8th Report, folio, pp. cxviii—cxix.) The hospital population and deaths at each age were then distributed over all the districts of the metropolis by the following formula:—

$$\frac{P'_x}{P_x} \times \frac{D_x}{D'_x} \times m'_x = m_x: \text{ or}$$

$$(\lambda P'_x + \kappa P_x + \lambda D_x + \kappa D'_x) = \lambda c_x; \text{ and } \lambda c_x + \lambda m'_x = \lambda m_x:$$

in which P_x = the population of London at any age x ;
 P'_x = the population of London at the same age x , exclusive of the population of the same age in hospitals;
 D_x = the deaths in London at the age x ;
 D'_x = the deaths in London at the age x , exclusive of the deaths at the same age in hospitals; m'_x = the rate of mortality at the age x in any district, without correction for deaths and population in hospitals, of persons belonging to that district;
 m_x = the corrected rate of mortality at the age x .

LONDON.—CORRECTIONS FOR DEATHS IN HOSPITALS

The c_x varies at the several ages, and in the two sexes, as the proportion of males and females and of deaths in hospitals, at the several ages, is very different. The logarithms of the several values of c_x are deduced by the following operations. The λc_x on a slip of paper is added to the logarithm m'_x of every London district.

NOTE.—The hospitals comprised in the return are the St. George's Hospital, Westminster Hospital, Grenadier and Fusilier Guards' Hospitals, Charing Cross Hospital, Middlesex Hospital, University College Hospital, London Fever Hospital, Small Pox Hospital, King's College Hospital, Royal Free Hospital (now in Pancras, formerly in Holborn), St. Bartholomew's Hospital, London Hospital, St. Thomas's Hospital, Guy's Hospital, Greenwich Hospital, Ordnance Hospital, Dreadnought Hospital (ship). The deaths in the lunatic asylums are not included in the calculation of the mortality of the several districts. They are included, however, in the mortality of the whole of the metropolis

The male population in this Table includes 2599 of the Metropolitan Police on duty, whose ages were stated, as well as 491 of the police of the City of London, and 1366 men on the river. The ages of the 1857 men were assumed to be the same as those of the 2599. 6031 military in barracks are excluded from the Table.

* Deaths uncorrected for error in Marylebone, and an error of 28 males, and 25 females in the first table at all ages, and exclusive of those at unspecified ages.

The rest of the population whose ages were not specified do not appear in the Table, which however includes 19 males and 29 females in a detached part of the parish of Clerkenwell, which is completely surrounded by the Edmonton district.

The data on which the calculations are based are given in the following pages, and in the 8th Report, pp. cxviii—cxxxix; and the preceding as well as the subsequent examples will enable any person to repeat the calculations, which were performed separately, by two calculators, and then compared. They have been carefully read in type.

NOTE

Respecting the differences between the Population as given in Part I., and in Parts II. and III., which appear only in the folio edition.

Owing to changes which have taken place in several of the Registration districts subsequently to the period (1838-44) to which the calculations of Mortality refer, the population given in these tables will be found in some instances to differ from that assigned to the same divisions, counties, and districts in Parts II. and III., which show the population of the districts and sub-districts as they were constituted on January 1st, 1849. The notes under the districts, Part II., give the dates of the several changes, which have arisen chiefly from the transference of parishes and places from one district to another; but in addition the following *districts* extending into two Parliamentary Counties or Ridings have now been transferred to other Registration Counties, and are so given in the arrangement Parts II. and III.; viz., *Dudley*, from Worcester to Staffordshire; *Todmorden*, from Lancashire to the West Riding of Yorkshire; and *Tadcaster*, from the East Riding to the West Riding of Yorkshire. In all cases the Population used in the calculations has been that out of which the deaths actually occurred. And where parishes were in districts a part only of the 7 years, the necessary corrections have been made.

^a See note page 166 respecting the differences which may be observed on comparing the female population as here stated with that given in Parts II. and III. which appear in the folio edition.
^b The female population of England, of Division 5, and of Cornwall No. 20, in 1831, is 234 in excess of the numbers given in Part II., owing to an error in Mr. Rickman's Population Returns, discovered since the calculations were completed.

a A decrease of 613 is observed.
 b This number is 234 in excess of the true female population in 1831, owing to a duplicate return in the Census Abstract, which was not discovered until the calculations were completed.
 c A decrease of 21 is observed.

d A decrease of 577 is observed. The decrease of Population in several of the districts of Gloucestershire is attributed to the depressed state of the West of England cloth manufacture, when the Census of 1841 was taken.
 e A decrease of 832 is observed.
 f A decrease of 232 is observed.
 g A decrease of 285 is observed.

^c The Return of Deaths in All Souls, one of the sub-districts of Marylebone, was found to be incorrect in the Years 1840-44; in the present corrected Return it has been assumed that the Deaths in the sub-district for the 7 Years, 1838-44, were the same as in the 4 Years, 1838-9, 1845-6, the Population of the sub-district being stationary.

The Table is read thus:—Lewisham District, out of 100 Children (Females) living under 5 Years of Age, 4.663 died; out of 100 Women living at 45 and under 55 Years of Age, 1.646 died. East and West London District, out of 100 Children (Males) living under 5 Years of Age, 11.967 died; out of 100 Men living at 45 and under 55 Years of Age, 3.167 died. London, out

of 100 Women living at 25 and under 35 Years of Age, .917 died; out of 100 Men living at 25 and under 35 Years of Age, 1.074 died.

The return of Deaths in All Souls, one of the Sub-districts of Marylebone, was found to be incorrect in the Years 1840-44; in the calculation, the mortality of the Sub-district in the 7 Years, 1838-44, was

LONDON, arranged in the order of the Mortality of Females of all Ages, the Healthiest placed first.

1841, and the Deaths Registered in the 7 Years, 1838-44.)

^a A great increase of population has taken place in Easington since 1831, owing to the opening of new coal mines at Haswell, Thornley, and other parts of the district.
^b An examination of the returns of the South Shields sub-district induced the suspicion that frauds had been committed by the late Registrar. He was tried at the Durham summer Assizes, 1844, for the registration of purely fictitious deaths, and for forging the signatures of informants; pleaded guilty, and was sentenced to 12 months' imprisonment. He was the postmaster and relieving officer of South Shields; and great exertions were made by his friends, who were numerous

INDEX

TO THE NINTH ANNUAL REPORT.

- Age, mode of expressing, 157; and example of the way in which the mortality at each age has been deduced, 158-9.
- Anson's ships, and others, mortality in, 36.
- APPENDIX:—Method and illustrations of the calculations of the rate of mortality among the population at different ages, 156 *et seq.*; population, deaths of seven years, and annual mortality in England and London, at several ages 176-7; in 2nd to 11th divisions 178-9; in counties 180-7; in districts of London 188-93; annual mortality per cent. in London districts, (in years 1838-44), the healthiest placed first, 194-5; population, deaths, and annual mortality in other districts 196-245.
- Bank circulation, bullion, deposits &c., (in 1845, 6) 8; money market (in 1846, 7), evidence before Committee 9, 10.
- Bankrupts (in 1842-6), 4.
- Banns, &c., marriages by (1838-46), 18. For 1846, *see* Tables 40-59.
- Birmingham gun trade brisk in 1846; the town shows a considerable increase of marriages throughout 1846, 45; trade of 1848 in a depressed condition, shown by evidence before committee, 12, and great decrease of marriages in the first quarter of 1848 as compared with the same quarter of 1846, 13; marriages, births, deaths, population in 10 years and quarters 13, 16, 17; marriages (1785-90), 14; the town has multiplied its marriages in a century, and more than doubled its population in 40 years, 13; violent fluctuations from 1780 downwards, 13; trade of 1824-6 in Birmingham when money and employment experienced a change, 13; remarks on overtrading 1824-8, 13 *et seq.*; iron trade stimulated by railways (1845-7), 14; increase of population and income from 1801, 15; saving recommended against adversity, 17.
- Births (in 1846), 1; in quarters of 9½ years 2; comparative view of births and deaths (1838-46), 1; proportion of to population in eight years, 1; excess in rate of births over deaths in eight years, 1; excess of births over deaths in quarters of 9 years, 2; births (in each of years 1842-6), 19; out of wedlock, proportions in several years, 19, 20; twins, triplets &c., in and out of wedlock, 20; excess of births in United Kingdom, its effect diminished by emigration, 33.
- BIRTH TABLES. For 1839-46, in divisions and counties 62-3; for 1846 (in the year and in quarters) in divisions and counties 64-5; the same in districts 66-77. Illegitimate Births in 1846, (in quarters) in divisions and counties, 78-9; the same in districts 80-91. Twin Births, legitimate and illegitimate, distinguished in sex, in divisions and counties, 92; the same in districts 93-100; triple births according to sex, 101; quadruple, 101. Births in 1846, in divisions (running with deaths in the same year), 119; the same in counties, 120-3; the same in districts 124-145.
- Censuses of 1831-41, rate of increase of population in the interval, 156.
- Certificates, marriages by, for 1846. *See* Tables 40-59.
- Chapels, &c., marriages in (1838-46), 18. For 1846, *See* Tables, 40-59.
- China treaty, mills built exclusively for the Chinese trade, 10; opening of China trade, 14.
- Commons' committee, evidence before 9, 10; Birmingham evidence, 12, 13; 16, 17, (*note*).
- Consols (1841-4), 3; (in 1846), 8.
- Cook's sanatory measures, 36.
- Corn. *See* prices and importations; repeal of corn-law, 5, 10.
- Cotton imported (in 1842-6), 7.
- Criminals (in 1842-6), 4.
- Deaths (in 1846), 1; in quarters of 9 years and latter half of 1837, 2; comparative view of births and deaths (1838-46), 1; proportion of, to population in 9 years, 1; excess in rate of births over deaths in 8 years, 1; deaths and excess of births over deaths, in quarters of 9 years (and half of 1837), 2; deaths in quarters (of 1845, 6), 4; extracts from the quarterly returns of 1846, 20-37; mortality of the first quarter of 1846, compared with that of previous years, 20; low mortality of first quarter of 1846, the effect of mild temperature, 21; in the north the mortality raised by

scarlatina, 21; deaths in the quarters of 1838-46; also in 115 districts which made quarterly returns, and in other districts (1839-46), 20; mortality augmented in second and third quarters of 1846 by high temperature acting on putrescent matter, 23-6; and other causes, 35-6; local differences of mortality, 26; Surrey and Manchester compared, 27; mortality great in last quarter of 1846, from typhus, diarrhœa, influenza, &c.; increase shown in particular places, 30-1; the cold not the principal cause, 32; immigration of Irish, 32; high price of provisions and distress, 34; mortality of Manchester and Anglesea compared, 35; of Hull and the Isle of Wight, 35; health of the navy at different times, 36; the mortality of 1846 increased to a much greater extent in large towns than in the country, as shown by a comparative statement of deaths in two years, 36-7.

DEATH TABLES. For 1838-46, in divisions and counties, 102-3; for 1846 in divisions and counties, in quarters, 104-5; the same in districts, 106-118. Deaths at different ages (months, years,) in divisions running with births for the same year, 119; the same in counties, 120-3; the same in districts, 124-145. DEATHS in London from all causes in the quarters of eight years (1840-7), 146-153.

Diarrhœa, &c., in London, in September quarter of 1846, 24; in September quarters (1845-6), 29; in September and December quarters (of 1846), 30-1.

Diseases fatal in London, in the quarters of eight years (1840-7), 146-153.

Dissenters, marriages of, (1838-46), 18. For 1846, see Tables, 40-59.

Emigrants in 9 years (1838-46), 1.

Expenditure of 1846, gross and net, 10.

Exports, official values of (in 1842-6), show a decrease on the last year, 7.

Febris castrensis, 33.

Fluctuation in marriages, an expression of the people's prospects, 3; amount of in 1842-5, 3; in 1842-6 equal to 16 per cent. correcting for population, 4; fluctuations in Birmingham, 13; observations thereon, 14-18.

Glaisher's, Mr., remarks on the year 1846, 154-5. See also Meteorology.

Hospitals of London, mortality and population of, distributed over metropolitan districts, 160; formula and logarithmic operation, corrections for deaths in hospitals, 160-2; population and deaths of 7 years at specified ages, in London and London hospitals, 165.

Illegitimate births, proportions in several years, 19, 20; legitimate and illegitimate, twins and triplets, 20. For 1846, see Tables 78-91, 92-100.

Importation of wheat (in 1832-46), 6; of coffee, tea, sugar (in 1842-6), 6; of cotton, showing a remarkable decrease in 1846-7; official value of imports in the 5 years, 7; showing a decrease (in 1846), 7.

Indian conquests, 11.

Irish disturbance, and bill for the "protection of life," rejected, 11; arms bill withdrawn, 11; famine and public works, 11, 12; gun-trade of Birmingham revives, in 1846, in consequence of Irish demand, 12; immigration of Irish, 32-3.

Jews, marriages of, (1838-46), 18. For 1846, see Tables 40-59.

Licence, special, non-special, marriages by, (1838-46), 18. For 1846, see Tables 40-59.

London Abstracts of Causes of Death (1840-7), 146-53.

Malt-duty, receipts from (in 1842-6), 6; increase equal to 14 per cent., 6.

Manchester, waste of infant life in, 28-30; crowding of Irish here and at Liverpool, 32-3, mortality here compared with that of Surrey, 27; with Anglesea, 35.

Mark signatures (1839-46), 18. For 1846, see Tables, 40-59.

Marriages (in 1846), 1; in nine years (1838-46), 1; proportion of the married to population in eight years, 1; marriages in quarters of 9½ years, 2; table of persons married in each year from 1756 to 1846, 3; marriages in quarters (of 1845-6), 4; in 1842-6, in twelve principal towns, 5; marriages in church or elsewhere (in the years 1838-46) by licence, banns, certificate, in chapels, offices, &c. 18; also marriages under age, &c., remarriages, signed by marks, 18, 19; proportion per cent. of marriages under and of full age (1843-6) 19; under age (1839-46), 19; proportion per cent. of mark signatures (1839-46) 19; proportion per cent. of widowers and widows, 19.

Marriages (fluctuations of), express the people's prospects, 3; tendency to, correctly shown by proportion to unmarried women living at the same time, 4; fluctuation (1842-6) 4; tendency to marry in 1846 exceeded that in 1845 more than is shown by relative numbers, 4; actual decrease in latter half of 1846, concurrent with increase of mortality, 4; a decrease in 1846 as compared with 1845 in Yorkshire and Lancashire, 4; Birmingham an exception among principal towns, as showing a considerable increase, 4; the fluctuation of 1842-6 with contemporaneous returns of crime, bankruptcy, savings' banks, poor relief, 4, 5; increase of 1844, with revival of commerce, consols

at 100, deposits in savings' bank eleven millions above payments, increased imports, and wheat at 51 shillings, 3-6; the fluctuation of 1845-6, showing a decrease of marriages at the end of the latter year, when imports and exports began to decline, with increase of criminals, bankrupts, paupers, and decrease of money deposits, 4, 5; increase of the year 1846 on 1845, concurrent with rise of wheat from 45s. to 54s., imports of coffee rose from 50 million lbs. to 52, of tea from 44 to 47; of sugar from 547 to 585, of duty on malt from 43 to 45 million l. 6, and a surplus of revenue on expenditure, 10; official and declared values of imports and exports, which show an increase in previous years, show a decline in 1846, imports of cotton, flax, hemp, wool, silk fell in this year, 7; capital authorized to be raised for railways rose from 6 millions (in 1842) to 124 (in 1846), 7, 8; amount expended rose from 3 to 36, 8; speculation at its height in 1845, rate of interest was advanced, and panic ensued, 8; commerce at the height of "apparent prosperity" in the early part of 1846, took an unfavourable turn in the middle, 9; condition of the country as described by witnesses before the Commons' Committee, 9, 10; violent fluctuations of marriages at Birmingham from 1780 downwards; great rise (in 1780-4) at the close of American war, 13; in 1785-90 another fluctuation in connection with buckles, *ibid.*; from 1801, a year of famine, to 1806, enormous rise and fall, *ibid.*; other fluctuations in 1812-17, in 1820-6, in 1832-7, each period embracing about 6 years, and attended with speculation, 13; for two families created in 1842 there were three in 1846, with proportionate increase of work and wages, arising from stimulus to the iron trade given by railways, easy discounts, opening of China trade, &c., 14; anticipation of the profits of future years, 15; excess of income should be saved against recurrence of adversity, 15, 17; flux and reflux a condition of progress, vicissitudes to be alleviated by science, 18.

MARRIAGE TABLES; for 1839-46, in divisions and counties, 39; for 1846, and in quarters, in accordance or otherwise with rites of the established Church, by licence, banns, certificates, between bachelors and spinsters, &c., widowers and spinsters, &c., widowers and widows, men and women under age signing with marks (in divisions and counties), 40-1; the same in districts, 42-59. AGES, so far as returned, of men and women married in 1846, 60; ages of bachelors and spinsters married, 60; ages of bachelors and widows, widowers and spinsters, widowers and widows at marriage, 61.

Marylebone, bad sanatory state of, 27-8.

Meteorology of March quarter (of 1844, 5, 6), 22; of June quarter, 23-4; of Sept. quarter, 29; of Dec. quarter, 37. Meteorological remarks for 1846, 154-5.

Method of calculating the rate of mortality of population at different ages, 156; example of the way in which calculation has been made at each age, logarithmic operations, 158-9; rate of mortality in London districts corrected for work-houses and hospitals, 160; example from Shoreditch, 163.

Muntz's, Mr., and other evidence from Birmingham, 12, 13.

Opium and quack medicines, use of, in manufacturing districts, 28.

Overtrading, 13, *et seq.*

Plague in the reign of M. Aurelius, 33, *note.*

Political events of 1846, summary of, 10, 11, 12.

Poor-law relief in two years, numbers relieved, and amounts expended, 5.

Population, regular increase, 2; increase not indicated in England by excess of births over deaths, from defect of registration and disturbing causes, 2; of United Kingdom, to what extent diminished by emigration, 33; method and illustrations of the calculations of the rate of mortality among the population at different ages at different times, 156 *et seq.*; population in London and London hospitals, 165; (*note*, regarding discrepancies in consequence of changes in the districts), 166; female population and annual rates of increase (1831-41), and annual rates of mortality, and numbers living to one death (1838-44), in divisions and counties, 168; the same in districts, 169-75. Population, deaths of seven years, and annual mortality per cent. in England and London at several ages, 176-7; in divisions 2nd to 11th, 178-9; in counties, 180-7; in districts, 188-245. See Appendix.

Potato-crop, failure of, 5, 7; its effect in 1846, evidence of Mr. Tooke, 10; want of potatoes the cause of scurvy, 34.

Prices of wheat and consols (in 1839-45), 3; of wheat and other commodities (in 1843-6), 6.

Quadruple births, 101.

Quakers, marriages of (1838-46), 18. For 1846, see Tables, 40-59.

Quarterly Returns, for March quarter, 20-22; for June quarter, 22-4; for September quarter, 24-30; for December quarter, 30-7.

Railways, amounts expended on, (in 1844-5), 3; capital authorized, amount expended (in 1842-6), 7, 8; amount of stock, scrip, &c., in the market at the crisis (of 1845),

- 8; bank interest raised to $3\frac{1}{2}$, and panic produced, 8; effect of railroad speculation on the money market, mentioned by Messrs. Bevan, Jones Loyd, and Tooke, 9, 10.
- Re-marriages (1841-46), 18; proportion *per cent.*, 19. For 1846, *see* Tables, 40-59.
- Revenue of 1846, gross and net, 10, showing a surplus, *ibid.*
- Roman Catholics, marriages of, in 1846, Tables, 40-59.
- Savings banks, sums received and discharged (in 1844-6), 5.
- Small-pox, measles, &c., in London (in 1846), 22-31. *See* Diseases.
- Sugar duties, alteration of, 11.
- Surrey, calculation of rate of mortality at each age, 158-9. An example.
- Sydenham's observation on the periodical occurrence of English cholera, 25.
- Tariff, changes of, (in 1842-5), 3; new corn-law, 5, 10; articles of consumption cheapened and increased, 6; duties on sugar altered, 11; modifications of the tariffs of Russia and United States, 11.
- Temperature, &c., of 1846, compared with previous years; it lowered the mortality of this year, 21, 32. *See* Meteorology.
- Twins and triplets in and out of wedlock, 20. For 1846, *see* Tables, 92-100. Triple births, 101.
- Weekly Returns, 38.
- Wheat, price of in 1832-8, compared with (1838-44), 6; (from 1839 to 1845), 3; (in 1843-6), 5, 6; importations, 6; amount of imports depends on the country's ability as well as necessities, 6; relative quantities of home growth in 4 years, 6.
- Widowers and widows (in 1842-6), 18; proportion *per cent.*, 19. For 1846, *see* Tables, 40-59.
- Workhouses of London, mortality and population of, assigned in calculations to the districts to which they belong, 160.

For List of Districts, with Numbers of Reference, *see* Eighth Report, pp. 362-5.
