CAPE OF GOOD HOPE.

PRELIMINARY REPORT OF THE REGIS-TRAR OF BIRTHS AND DEATHS FOR YEAR 1896.

Presented to both Houses of Parliament by Command of His Excellency the Gobernor.

POPULATION.

The number of persons in the Colony, excluding British Bechuanaland which was only annexed on the 15th November, 1895, and Pondoland, which is not subject to the provisions of the Births and Deaths Registration Act (the latter of which territories need be taken into account), was probably about 1,821,551 on the 31st December, 1896, if the increment is taken all round at 2 per cent. per annum.

IMMIGRATION AND EMIGRATION.

The Customs Department continues to collect particulars of arrivals and departures by sea. According to these returns—which do not include Naval departures by sea. According to these returns—which do not include Naval and Military passengers, and in which children are reckoned at the ordinary scale as adults—the excess of arrivals over departures between the 1st of January, 1891 (the census was held in April in that year), and the 31st December, 1896, was 59,896, practically all Europeans.

As regards the proportion of the voluntary immigrants (state-aided immigration being conducted on the smallest possible scale) who remained in the Colony, and what number proceeded to the North—the Transvaal, the Free State and Rhodesia—the reports rendered by the General Manager of Railways are full of interest.

Railways are full of interest.

It follows from the above stated facts that the balance against Colony was 4,048 Europeans. The Bethulie returns are unfortunately (owing to a misunderstanding on the part of the department concerned) for 7 only instead of 12 months, and are *not* included in this calculation.

REVENUE, 1896.

Arranging the Districts according to the amount of the collections on account of Births and Deaths Registration in each, it is found that they take the following order:—

	£	s.	d.
Cape [with Simonstown and Wynberg]	25	10	0
Port Elizabeth	12	3	6
Kimberley	9	5	0
East London	4	19	6
Albany	2	17	6
Albert	2	5	0
Queenstown	2	3	6
Graaff-Reinet and Cradock, each	1	15	0

10tal (10 D. 11 h)	02	10	
	The state of the s	THE PERSON NAMED IN	D-27 (1)

Thus 46 Deputies collected £82 10s. 0d., compared with £53 4s. 6d. received by 39 in 1895.

The Municipal Records of Births and Deaths kept prior to 1st January, 1895, and the Voluntary Births Registration Books are preserved in the Fireproof Safe of the Central Office, where £20 4s. 0d. was collected. The total revenue was therefore £102 14s. 0d., against £64 10s. 6d. in 1895.

The fee for alteration or assignment of a child's christian name is 25 6d in far a court for a corrificate.

The fee for alteration or assignment of a child's christian name is 2s. 6d.; for a search, 1s. for each year or part of a year; for a certificate, 5s.—all payable in revenue stamps. If a Certificate is authenticated by the Under Colonial Secretary, that officer charges a fee of 15s. in addition.

EXPENDITURE.

The expenditure brought to account for the financial year 1895-6, amounted to £2,444 for salaries and allowances to the staff in the Central Office, the Deputy Registrars, their Assistants and Field-cornets, and £622 for Printing and Stationery (including Index Books and the main stock of amended Births and Deaths Reports).

For 1896-7, the disbursements, as far as brought to charge to 1st January, 1897, totalled to £1,637 for general services, and £84 for printed forms and books.

ADMINISTRATION.

No great amount of compulsion in the carrying out of the provisions of the Act has as yet been resorted to. In 1895 twenty persons were charged, and in 1896 sixty (thirteen being Europeans), with the result that fifty-four convictions followed, while three cases were withdrawn and three otherwise disposed of. There was, moreover, one case of contravening § 20, Act 7 of 1894 (false statement) dealt with at the Northern Circuit of the Eastern Districts Court in connection with an incest case.

Government Notice No. 1,017 of 19th October, 1896, which appeared in the English, Dutch and Kafir languages and was circulated far and wide, conveyed a significant warning that the leniency hitherto shown would not be continued. Owing to the severe drought and distress which has prevailed in several of the Karroo Districts considerable allowance for unpunctuality has been made with the cognisance of the Central Office. At the time of gathering the statistics of the crops and of livestock, the selected enumerators are required to personally visit every holding in the Colony. They are always provided with the general notifications regarding registration, and on this occasion (in the 1897 enumeration) have special instructions to enquire whether all recent events have been duly reported; they are enabled, moreover, by the last published regulations to then and there take and sign the necessary papers, thus saving informants residing on remote farms both time and trouble.

The comments of the Deputy Registrars on this subject are given in their own words: see pp. ix-xxxiv.

The only Magistrates who have still (5th April, 1897) retained the

appointment of Deputy Registrar ex-officio are the following:

In the Old Colony.—Britstown, Colesberg, George, Glen Grey, Herschel, Hopetown, Middelburg, Montagu, Mossel Bay, Murraysburg, Peddie, Port Nolloth, Riversdale, with Walfish Bay. In Bechuanaland -Gordonia and Kuruman.

On the other hand the only special appointments in the Transkeian Territories are in the following Districts, viz.: Mount Currie, Engcobo, Butterworth, Idutywa and Kentani.

It will be convenient to record here for reference the changes that have been made in the last 15 months as regards the constitution or abolition of Urban and Rural Areas.

NEW DISTRICT CREATED.

Montagu. P. No. 5, 9/1/97. [part of Robertson, Swellendam and Worcester].

DISTRICT ABOLISHED.

Taung. P. No. 149 of 1896. Became 1st July, 1896, part of Vryburg.

NEW AREAS.

URBAN.—Napier (Bredasdorp). P. No. 150, 28th April, '96. V. M. Board. Hackney and others (Q.T.). P. No. 259, 27th July, '96. Indwe (Wodehouse). P. No. 313, 12th Oct., 1896. Do. Engcobo. P. No. 437, 14th December, 1896. Do. Vosburg (Victoria W.). P. No. 427, 12th Dec., '96. Municipality. Laingsburg (P. Albert). P. No. 42, 8th Feb., '97. V. M. Board. Rhodes (Barkly E.). P. No. 70, 6th March, 1897. Do. Rural.—Cookhouse (Bedford). G. N. 1155, 25th November, 1896. Middelburg Road (Middelburg). G. N. 1235, 28th Dec., 1896. Richmond Road (Richmond). G. N. 18, 11th January, 1897.

NATIVE LOCATION SYSTEM ABOLISHED.

Barkly West District. G. N. 91, 15th January, 1897. Hay. G. N. 101, 4th February, 1897.

OTHER CHANGES (Transfers).

OFFICE ARRANGEMENTS.

In statistical work changes in the personnel of the office are much to be deprecated. With feelings of pleasure I may therefore say that only one of the staff, and a very deserving member thereof, left in 1896, with a view to seek a more suitable climate. For some months past the regular establishment has consisted of seven officials - four being exclusively employed in tabulation. Upwards of 4,000 observations on the births and deaths forms submitted were despatched in 1896. The rule of the department is to query on essential points only, otherwise that number would have been largely increased. As it is, the whole time of two clerks is occupied in attending to the receipt, custody, and examination of the forms that arrive every month. Although considerable allowance should be made for the distractions in the offices of Deputy Registrars, one is forced to the conclusion that the exercise of more care at the right time would really save all the parties, including the Deputies themselves, much future trouble. Errors and omissions in names and dates naturally give rise to the greatest amount of inconvenience, as the original informant him or herself has obviously to add or amend the neces-

The system whereby entries are copied on to the specially prepared cards has now been applied to the Native Registrations with—as was anticipated in Section vii., Report for 1895—satisfactory results.

In connection with the subject of "queries," it is not out of place to allude here to certain correspondence which has passed in regard to the names of natives and the bearing of custom thereon.

Major Elliot, C.M.G., the Chief Magistrate of Tembuland, Transkei and Pondoland, to whom this department is much indebted for kind assistance in many ways, telegraphed as follows on the 8th January, 1897:-

"When a native woman marries by native custom her birth name is abandoned, and a name is given to her by her husband. Her paternal name also falls into disuse, she taking the paternal name of her husband's family. Names borne before marriage therefore are entirely abandoned, but might be used for the purpose of tracing descent. Boys retain names given them at birth, except the sons of chiefs, who are usually, when they attain man's estate, given by the councillors some high-sounding name, which they retain through life. Boys also retain parental name. The foregoing is the custom amongst all tribes, I believe, except the Pondos."

Another authority, Mr.R. J. Dick, Special Magistrate, Tamacha, K.W.T.,

"As a matter of practice and custom, surnames, as such, have never been and are not even now used by these people (natives). In imitation of our own custom some of the natives are commencing to use a surname, but from such capricious and whimsical motives as can only make confusion worse confounded before long. Both Heathen and Christian women after marriage drop their maiden names, whether baptismal or not, and assume a name received from their husband's family. This name being in all cases a single name—such as "Mary," or "Nolente." It may help to throw some light on this question if it is borne in mind that owing to a peculiar Kaffir custom a married woman may not mention by name her husband or his male progenitors. This custom is so strictly observed that I have frequently in Court to threaten married women for refusing to mention their hus-

It is not the policy or intention of this department to interfere with any distinct native custom. It is simply desired that one definite plan of reporting may be followed. If, therefore, a Christian native woman contracts a marriage, and such marriage is solemnized under the provisions of the Order in Council of 1838, or the Marriage Act of 1860, it will surely not be unreasonable to require that when such person comes to report the birth of her child, or the death of her husband, she shall sign the information form in the manner contemplated by the regulations. All that is aimed at is consistency. If the Registration system is to be of any value for the purposes of identifying individuals and facilitating the tracing of claims to property, uniformity of practice must be insisted upon. Obviously in a contingency of this nature no positive instructions can be issued to the Deputies or their Assistants. There are so many qualifying circumstances to be judged of, according to the place and the people, that no set of directions that could now be drawn up on such a delicate subject would satisfy all parties. Time, no doubt, will apply its own remedy to all these present inconveniences. Natives, who have the choice of two methods of registration—the one peculiar to Bantu tribes and the other general-cannot complain when they elect (as is becoming the fashion in Bathurst district, for example) to take the larger system, if they are required to answer the questions as a European would.

TABULATION BY OCCURRENCE DATES.

Reports relative to Births and Deaths are rendered monthly (becoming due on the 16th of each month and now usually arriving within 14 days from such due date), but the final results appear according to the dates of the occurrences. Consequently the Returns certainly of Births and probably of Deaths that happened in 1895 cannot now be looked upon as complete, while the already published figures will need considerable interpolations in respect to the additions to the families of the people.

It was stated [§ viii, 1st Report, 1895] that "if the full details are not required, returns of Deaths in urban areas during 1896 could be prepared within three months from the end of that year." As a matter of fact the detailed audited statistics of nearly 18,000 deaths of 1896 were finished on

the 31st March, 1897. See annexed List.

List of Districts with number of Deaths in each as registered to 15th January, 1897, tabulated by 31st March, 1897, in detail as regards Diseases

and causes of Deaths by Ages:-

Aberdeen, 193; Albany, 733; Albert, 350; Alexandria, 172; Aliwal North, 191; Barkly East, 74; Barkly West, 326; Bathurst, 181; Beaufort West, 317; Bedford, 229; Bredasdorp, 140; Britstown, 141; Caledon, 249; Calvinia, 177; Cape—Cape Town, 1,722; Cape, 620; Carnaryon, 155; Cathcart, 105; Cradock, 412; East London, 513; Graaff-Reinet, 522; Kimberley, 1,358; King William's Town, 2,005; Malmesbury, 505; Mossel Bay, 116; Oudtshoorn, 761; Paarl, 614; Port Elizabeth, 1,255; Queens-

town, 488; Robertson, 327; Simonstown, 122; Somerset East, 433; Stellenbosch, 325; Uitenhage, 648; Worcester, 331; Wynberg, 728; Prince Albert, 242; in all 36 Districts and 17,680 deaths.

PUBLICATION BY REGISTRATION DATES OF ADVANCE INFORMATION.

To satisfy public convenience, unaudited statements of Births and Deaths (with, in the latter case, particulars of Age and Disease), as registered, have been published in "The Gazette," for the municipality of Cape Town since July, 1896.

The system was extended (Registrar's Letter 30; Nov., 1896) to Kimberley, Port Elizabeth, King William's Town, East London and Somerset East Districts from 1st January, 1897, and has also been applied to all the suburban municipalities in the Cape Peninsula, and to the following important Towns:—Aliwal North, Beaufort West, Cradock, Graaff-Reinet, Grahamstown, Malmesbury, Oudtshoorn, Stellenbosch, Queenstown, Uitenhage and Worcester (the Deputy of Paarl has not so far rendered returns).

The early publication of the vital statistics of these 27 municipalities cannot fail to be of considerable value and interest to the local authorities concerned, and it will moreover afford, as the places are well scattered, a fair idea of the general *present* condition of the Public Health of the Colony Proper

SYSTEM OF REPORTING.

Reports are made by Informants (a) by Forms, (b) in Books.

Books are made use of in Locations specially treated, and the Native Informants have to appear personally before the Deputy Registrar or the Assistant, and sign the proper Book. In some few Native Districts where exceptional circumstances obtain, the Headmen or Chiefs are allowed to make periodical bulk statements (Numerical System) of the number of males and females born or died in their locations. Transcripts of the book entries are forwarded to the Registrar every month.

In Municipalities, Villages under Poard Management and Special Urban areas, Births, Still-births and Death's must be reported in person to the Deputy Registrar or Assistant, in whose presence the Informant must sign the Registration forms; otherwise the forms must be declared to before a J.P., Minister, or Medical man. Outside Municipalities, Villages under Board Management, and Special Urban areas, the Informants must appear personally before the Deputy Registrar, or Assistant, or Field-cornet, or any Police Officer, and sign the forms, or must have them declared to, or must sign them in the presence of a witness. The Deputy Registrar transcribes the entries from the forms into his Registration Book, and forwards the original forms to the Registrar.

RESULTS (PARTIAL) OF REGISTRATION, 1896.

As a supplement to the reports rendered by the several Deputy Registrars, an abstract has been prepared showing the number of births and of deaths "registered" in each district of the Old Colony in each of the years 1895 and 1896. This return will indicate fairly well the progress of the undertaking, in connection with which it should be remembered that except in 37 municipalities a compulsory system was entirely new, and that even therein the compulsion was mild.

With this preliminary report no returns of births arranged by occurrences is presented. In view of the superior interest attaching to the

statistics of certificated and uncertificated deaths in urban and rural areas, and of the time required to extract information regarding each species of disease, in combination with race, sex, and age, it was arranged that the mortality tables should be dealt with first. The sorting and tabulating work was commenced on the 1st February, 1897, and the results were communicated to the appreciative newspaper press as completed.

ACKNOWLEDGMENTS.

To the Hon. the Colonial Secretary I desire to tender the respectful acknowledgments of my staff, coupled with my own, for his unvarying courtesy, and his personal, invigorating interest in our work. For oft needed and much relished sympathy, support and advice, I have never gone in vain to Mr. Henry de Smidt, F.S.S., Under Colonial Secretary. The genial Medical Officer of Health (Dr. Turner), and Govt. Actuary (Mr. McGowan), have sustained many inroads on their valuable time, but have ever been most helpful, as has been Dr. Gregory, of the Health Department.

Towards my own staff I cherish a deep feeling of gratitude. Mr. Twycross, at the head of the tabulators, and Mr. Brande, in charge of the general routine of the office, continue to do capital service, and all members

of the staff vie with one another in keeping up a good record.

No department of the Government owes more to the Postal Service than does this one, which draws information from the public, day after day, by means of printed schedules, which, when completed and signed, instantly become documents of considerable value (the penalty for loss being a £2 fine). But the well-known buff envelopes (B. & D. 35), with their peculiar superscription and important contents, pass and repass safely in an endless stream.

But whatever good has been done has been accomplished by and through our agents all over the Colony—the Deputy Registrars, their Assistants, the Field-cornets, and the Police and C.M.R. The least I can do is to record here my sense of their services. For the past two years our official intercourse has been harmonious. All I ask is that they will bear with me for being precise over work, the importance of which grows as the years roll on.

A. C. DALE,

Registrar of Births and Deaths under Act No. 7 of 1894.

Office of Registrar of Births and Deaths, Cape Town, Cape of Good Hope, 3rd April, 1897.

DEPUTY REGISTRAR'S REPORTS.

ABERDEEN.—To all appearances, no doubt, the Act may be said to be in good working order. The machinery at the disposal of Deputy Registrars for keeping the requirements in their entirety before the rural public, is meagre to say the least of it.

Taking into consideration that the area of this Division is something like 3,000 square miles, the Deputy Registrar is inclined to think that the

Registrations are somewhat below the mark.

No difficulties have arisen necessitating any measures being taken to overcome or lessen them, since none have ever been brought to light.

To really improve and render more effective the administration of the Act in future, the appointment of a special police force for each district

should be made.

The Field-cornets being generally farmers, and constantly out on their lands and often away from their homesteads, are unable to give that undivided attention to the matter which it deserves, and some such change as above suggested would be desirable.

ALBANY.—The Deputy Registrar fears that the removal of the Cape Police from the district has affected the Registrations adversely. Circulars were sent out to Field-cornets, Justices of the Peace, Landowners, &c., and in many cases these are doing their best. The simpler form used since the end of 1895 seems to be better filled in, and appears to cause less annoyance, the first form used was considered far too inquisitorial.

ALBERT.—The present system of reporting Births and Deaths seems to

be entirely satisfactory.

The previous methods of distributing printed instructions seem to have had the desired effect of bringing the Act before the notice of the public in urban as well as rural areas, and at present it is almost universally known. Instances where informants, who registered after the prescribed time, and plead ignorance of the Act, are becoming very rare.

The chief difficulty in working this Act at present seems to be the fact

of some of the Field-cornets being somewhat illiterate.

ALEXANDRIA.—The details of the arrangements for administering the Act are now fairly well understood by the Field-cornets and others who assist the Deputy Registrar, and the public generally are well aware of what is required of them.

The requirements of the Act have been kept before the rural public by means of the Field-cornets and the Cape Police patrolling the district, but for the last few months the services of the latter have been unavailable, they

having been sent to the Border on Rinderpest duty.

The Deputy Registrar has experienced great difficulty in ascertaining the "cause of death" from natives, and it is almost an impossibility to get the correct cause unless the report is verified by a European. Could not this form be simplified?

The Deputy Registrar suggests that all Field-cornets be instructed to issue vaccination notices to informants, as the requirements of vaccination

amongst the rural population are not properly carried out.

ALIWAL NORTH.—Every facility has been afforded to enable farmers and others to register either births or deaths, all instructions in connection therewith being freely circulated by means of Cape Police, Field-cornets and local posting.

G. 46—'97.]

C

It has been found necessary to return to Field-cornets several forms of Registration, for corrections, amendments, &c. A great improvement has been noticed during the past year, the number of Registrations during 1895 being 448, and during 1896, 511; this alone warrants the Deputy Registrar in coming to the conclusion that the requirements of the Act are now better understood. The Deputy Registrar would suggest that in cases of still births in rural areas declarations of qualified informants be insisted upon. In cases of deaths reported to Field-cornets, the latter might be authorised to issue burial orders before burial. It is quite possible that deaths might occur "other than in a natural way," the body buried, and the ends of justice defeated. In Urban areas this is prevented, but there is no check whatever in cases of death occurring outside the town, the registration not taking place till three months after death. It is satisfactory to note (by recent Circular 11/1/97) that the untiring efforts of the Deputy Registrars who are constantly putting forward their grievances, and who devote much overtime to the performance of the special work have been recognised.

Barkly East.—All rural registration is now effected by the Field-cornets and their assistants; with a few exceptions the work is done fairly well. The Cape Police whilst stationed here were of great assistance, the C.M.R. would do equally good work, but unfortunately are all away on Rinderpest duty. The B. and D. 1 and 2 forms are a great improvement on the old ones and simplify the work considerably as regards Rural Registration.

Barkly West.—Having only held office as Deputy Registrar during the latter five months of the year the present Deputy Registrar is unable to report on the arrangements which were made in the early part of the year for keeping the requirements of the Act before the public.

The Rinderpest Regulations have naturally interfered to some extent with the effectual working of the Act by restricting the moving about of natives. Consequently several births and deaths were not reported within the prescribed time.

The requirements of the Act appear to be fairly well known throughout the Division, nevertheless cases occasionally occur in which informants profess utter ignorance of the law. Whenever an opportunity has occurred the Deputy Registrar has invariably explained fully what is required, and requested that the information might be spread.

Some difficulty has been experienced in obtaining from Field-cornets properly filled in Forms of Information in cases where inquests have been held by them. It is anticipated that matters in this respect will work more satisfactorily in future as the Deputy Registrar has personally explained fully to those officers their duties whenever a death occurs in their wards requiring to be dealt with under the Inquest Act.

Bathurst.—Every means possible have been adopted to keep the requirements of the Act well before the public who, with the exception of a very small section of the more ignorant natives in remote localities, come freely to the Field-cornets with the necessary information, whilst those officers themselves lose no opportunity of collecting the same by visits (without any expense to Government) to the different parts of their Field-cornetcies. In this way many births and deaths, which through ignorance were omitted to be notified at the proper time, have subsequently been reported.

The fact that the number of births registered in 1896 was 383 compared with 304 in 1895, and that the rate per 1,000 for the past year was 41.64 evidences the conclusion that the requirements of the Act have been well carried out by the several officers responsible.

Beaufort W.—The urban administration of the Act is entirely in the Deputy Registrar's hands at the present time, the office of Urban Assistant having been abolished in October last. The rural administration is almost entirely in the hands of the Field-cornets and Assistant Field-cornets, all of whom (with one exception) have rendered very efficient aid, and the Deputy Registrar takes this opportunity of thanking the gentlemen in question for their valuable assistance.

The requirements of the Act, the Deputy Registrar is firmly convinced, are perfectly well known to the European population throughout this district, and are faithfully observed, and the same may be said with regard to the urban native population. Great difficulty is experienced with reference to the rural native population, and the conviction has been thrust upon me that the only manner in which the requirements of the law can be brought home to this class is by prosecution in every case of failure to comply with the regulations. A notice conveying a warning to defaulters in the matter of Births and Deaths Registration has been published in the local paper during the latter portion of the year, and slips (in English and Dutch) containing a similar warning have been extensively distributed throughout the district.

There is no doubt that the number of deaths registered during the year has been abnormal, but it should be considered that Beaufort West is a health resort for consumptive invalids, many of whom, coming here in the

last stages of illness, die, and help to swell the mortality.

There is one fact that has been very prominently brought to my notice, and that is the urgent necessity which exists at Beaufort West for the establishment of a Hospital and Free Dispensary. A great portion of the mortality, more especially infantile, is simply due to the fact that in very many cases no free medical attendance or medicine is obtainable. This is too often due to the fact that no attempt is made in this direction by the relatives and friends of the deceased. The medical fraternity, speaking from cases brought to my immediate notice, most charitably do their best, but they cannot be expected to do everything.

Another point which has been brought to my notice is that the free burial ground here is under no control whatever. This has been reported on previously, and the necessary steps are being taken to remedy this evil. The Deputy Registrar would suggest that a regulation be framed to the effect that in every case of disinterment and re-burial notice of the fact should be given by the parties concerned to the Deputy Registrar for trans-

mission to the central office.

Taking the working of the Act throughout the district on the whole during the year, the Deputy Registrar is of opinion that, with the exception of the rural native population, the administration has been very successful.

Bedford.—As the present Deputy Registrar assumed duty at the beginning of September, 1896, his report is necessarily brief. The arrangements made for working the Act and for keeping the requirements thereof before the urban and rural public are the same as during 1895, and therefore it is unnecessary to enumerate them again. The Act appears to be working well in this district. Some births and deaths certainly do escape registration, but they are very few. This is attributed principally to the vigilance of the police and the Inspector of Native Locations.

In view of the Deputy Registrar's very short experience of the Act in this district, he is not at present prepared to make any suggestions for

improving the administration of the Act in future.

Bredasdorp.—The details of the arrangements made for the working of the Act and for keeping the requirements thereof before the urban and rural public are much the same as last year, and Field-cornets are continually reminded of the importance of the work, all notices being promptly distri-

buted to them for circulation. There being no Mounted Police in the district is felt to be a great want, especially as there are so many outlying sheep stations.

The increase of the reports of births and deaths show a satisfactory result of the working of the Act in this district for the last year, more certainly in regard to births which have not been abnormal.

Britstown.—The details of the arrangements made for working the Act and for keeping the requirements thereof before the public (urban and rural) have, during the past year, been more satisfactory in general, owing to the officials, especially Field-cornets and Police, having become more efficient in the performance of their duties and the readiness displayed by farmers and others to render every assistance to the natives in the rural areas has considerably lessened the difficulties of Registration formerly experienced.

The Deputy Registrar has therefore no suggestions to offer for a more effective administration of the Act in future.

CALEDON.—The arrangments made for working the Act and keeping the requirements thereof before the urban and rural public in this district are, generally speaking, satisfactory. The difficulty elsewhere experienced by the Deputy Registrar in obtaining correct information forms from Field-cornets is here not so apparent, due to the fact that the class of men appointed is better, and, with one exception, the Field-cornets would seem thoroughly to understand the particulars of the duty, and cheerfully assist the Deputy Registrar in carrying out the work.

The only difficulties that have arisen in connection with the duty of recording births and deaths has been the apparent apathy on the part of the European population to grasp the importance and necessity of immediate registration.

After the recent report and investigation into the registration system at Genadendal, the Deputy Registrar can with confidence report that the additional distribution of notices and general stirring up of the inhabitants has resulted in an increased number of registration of births, the shortfall in which was so apparent last year as to call for special remark. The assistance of the missionaries and their cheerful co-operation with the local assistant must give good results.

Trifling matters, such as a farmer's faith in his own diagnosis in case of "cause of death" as opposed to a medical man's verdict, will always occur in rural districts where the production of a medical attendant's certificate is not compulsory.

The coloured classes would now seem to have grasped the necessity of the registration of births and deaths, and would, judging by results, appear to be more regular in reporting than their more enlightened fellow citizens.

On the whole, the Deputy Registrar considers that the means adopted secure the best returns, and generally the administration of the Act in this district at present would seem sufficiently satisfactory.

Calvinia.—The requirements of the Act are always being well kept before the urban public by the local police, who always distribute any notices, &c., when necessary, and are continually on the look out that any birth or death is duly reported at this office, and as this village only contains about 600 inhabitants, this is effectually accomplished. As regards the rural public, the difficulties are somewhat greater on account of the very large extent of this district, (the continual drought that prevailed during 1896 causing the farmers to "trek" about in search of pastures), and the way the people are generally scattered about. The D. M. Police, whenever they go into the district (e.g., on patrol or otherwise) get instructions to make full enquiries, wherever they think necessary, as to births and deaths,

complete B. and D. forms as required, and by general questions, &c., show the people that the carrying out of the provisions of the Act is a matter of importance. To the D. M. Police too are given all notices, &c., &c., for distribution amongst the rural population.

The Deputy Registrar has only been in this district for $3\frac{1}{2}$ months, but has thus far experienced no difficulty in the working of the Act; the Field-cornets render as much assistance as they are capable of doing, and the farmers generally appear very willing and even anxious to have births and deaths recorded (especially the former), but as above mentioned this is a very large district and the farmers "trek" about a good deal, so that it often happens the report is not made until several months have elapsed, but on the whole the working of the Act in this district appears to be very satisfactory.

CAPE DIVISION.—The Act has worked fairly well during the year both in urban and rural districts, and as time runs on it is thought the Act will become very popular. The work has been done very well by both urban and rural A. D. R.'s, and if convenient centres can always be procured there is no doubt but that the people will conform to the law, and that no difficulty will be experienced. The number of births and deaths has considerably increased in all the districts, which is a good sign that more attention has been paid to registration than in 1895.

The Burial and Inquest Returns are of great assistance for checking

It is a pity that no provision has been made in the Act to obtain compulsory returns regarding baptisms.

Woodstock Assistant to Deputy Registrar.

With respect to the Births and Deaths Act in my district, I consider it works smoothly and well.

The inhabitants to a great extent have been educated up to it, as the Municipal Council embodied in the regulations when the Municipality was formed, that all births and deaths were to be registered, consequently I endeavoured to act up to and enforce the regulations during the period of my six years' secretaryship before

the passing of the Act.

Thus when the Act came in force it was only carrying out the same regulations, but in a more strict manner, and as a rule I have very little difficulty with the registrations.

Simon's Town Assistant to Deputy Registrar.

With reference to the working of the above Act in this district, I have the honour to report, from information gleaned and personal observation, that the registration of births and deaths is faithfully carried out.

And, what is most satisfactory, even the coloured population, and those too who inhabit the more remote parts of the district, are diligently responding to the notices that have been distributed amongst them.

Carnaron.—The European population of this district appear to be aware of the requirements of the Act, but owing to the nomadic life led by a portion of them, some difficulty is experienced in getting the information from them within the time prescribed by the Act. The police have been instructed to make enquiries with regard to delinquents, while out on patrol. Great difficulty is experienced and unnecessary work caused by the carelessness of the Field-cornets in preparing forms, which invariably have been returned for amendment.

All births and deaths appear to have been registered, and the Act seems to have worked fairly well, but the Deputy Registrar is of opinion that it will never be worked to advantage unless a longer time be allowed for registration, which should be solely in the hands of the Deputy Registrar.

CATHCART.—The arrangements made for the working of the Act are the same as those in force during 1895, viz., by myself in the urban area and by the police and Field-cornets in the rural areas. The requirements of the law are kept before the public by notices in the local newspaper, the police, and the distribution of Government Notices among the farmers by means of the police while on patrol, who explain to the people what is required of them.

The Europeans, on the whole, are pretty well acquainted with the regulations, but some difficulty is still experienced with the natives who, continually coming and going from one district to another, or to and from the Transkei, do not know what to do, and in very many instances leave without reporting events among them, and even before their masters know anything about them. The real difficulty is still the great distance many of the country people reside from the domiciles of the Field-cornets or the police camps. It has, however, been somewhat lessened by the police taking a supply of forms with them when out on patrol and filling them in at the farmers' houses. The Deputy Registrar does not see how the administration of the Act in this district can be improved as the present arrangements work very smoothly, and the inhabitants both in town and country are rendering every assistance in their power to facilitate the registration work.

CERES.—In the Deputy Registrar's report for 1895, dated 16th May, 1896, his views as to the working of the Act No. 7 of 1894 in this district, the difficulties that were encountered and so forth, were fully set down.

The Deputy Registrar has little or nothing to add to that report, except in so far as to say that during the year 1896 things have gradually been settling into a groove.

By dint of carefully explaining to Field-cornets and others the object of the Act, and the proper methods to be observed in carrying out the same, the Deputy Registrar has not experienced so much trouble as heretofore, although there is still room for improvement.

He is unable, however, to offer any suggestions that would render the administration of the Act more effective, unless it be that either the Deputy Registrars be relieved, to some extent, of the heavy work that falls to their lot, or that they be adequately recompensed for their services.

CLANWILLIAM. — The Deputy Registrar is of opinion that all the Europeans in this district are aware that births and deaths must be registered, but there may be a few natives living away from farm homesteads who are not aware of the fact. The only way to find out whether births and deaths, which may have occurred, have been reported is for the police to make enquiries at every house or hut that they pass when on patrol, and for Field-cornets to make enquiries when they travel about their wards. The Field-cornets and other assistants have been well instructed, and any errors made by them in preparing forms are due to carelessness. More births and deaths were registered in 1896 than during 1895, the increase being about 30 per sent.

The Deputy Registrar has instructed the Field-cornets to inform him of any contravention of the Act, but thus far no complaints have been made, hence there were no prosecutions during 1896.

The Deputy Registrar does not know of any births or deaths, which occurred more than three months ago, remaining unregistered in this Division; there may be a few.

Colesberg.—The Police are constantly told to see that all births and deaths are reported, and remind the public of the penalties they are liable to for failing to register. Since the forms of registration have been simplified many more events have been registered.

Cradock.—The public in urban and rural areas have been afforded every opportunity of knowing the requirements of Act 7 of 1894 in this district. Notices have been forwarded to Ministers of Religion, Town Police, and Cape Police, and the Mayor of Cradock and chairman of the Municipality Maraisburg, and the leading inhabitants of the district, asking them to use their endeavours to see that all births and deaths coming to their notice are reported. Forms and instructions have been widely distributed to

the urban and rural population. The simplification of the forms has removed the various difficulties. Field-cornets have generally proved themselves qualified to perform the duties imposed upon them. The chief difficulty is the apathy of the people, and the Deputy Registrar considers that a number of native births go unregistered. It is only when a burial order must be obtained that attendance is secured, simply from fear that no minister of religion would inter the body without a burial order.

The Deputy Registrar suggests that medical men should report any infectious diseases in any locality to the Deputy Registrar, who would in

turn report the same to the Local Authority.

In cases of deaths of natives, when no medical certificate can be produced, it is most difficult to make out from the informant what the person died from. Natives can scarcely be expected to be aware of the symptoms of anyone's illness, but in cases of native infants the cause of death given is generally convulsions or teething.

East London.—The details of the arrangements made for working the Act are all as complete as can be under the circumstances. Owing to the removal of the Cape Police from the district the Deputy Registrar had some difficulty in making the natives understand that they have to go to the Field-cornets to report. There are now a few special police who do not fill in forms, but send natives to the different Field-cornets. The Deputy Registrar is afraid that they do not get all births registered, especially from those who reside on isolated farms under no police or other supervision. This again compels him to urge the necessity of a book of some kind so that a ticket could be given to each one that reports a birth; it would not only facilitate the work, but the police would so easily trace any not reported. This refers only to those living in the outlying districts; the locations would not require it, as they are under the supervision of the different inspectors.

In conclusion, the Deputy Registrar brings to notice the cordial support he has at all times during the last year received from all his assistants; they have at all times been most willing in endeavouring to carry out the working

of the Act to the best of their ability.

FORT BEAUFORT.—The year 1896, as regards the operation of the Act, has been uneventful. The public have come forward freely to report the births and deaths, still in the distant and sparsely populated portions of the district there is no doubt that births and deaths have occurred, of which there is no record.

The public are constantly reminded of the requirements of the Act through the medium of the Police, Field-cornets, and notices generally

disseminated.

Considerable aid would be afforded to the officers carrying out the provisions of the Act if they were empowered to inspect the Baptismal and Burial Registers* of the various churches, or, indeed, if a birth certificate of Registration (on the simplest form) were necessary before a baptism could be performed, excepting only those urgent cases where it is expedient to baptise the child with the least possible delay.

FRASERBURG.—The Act is, as far as the Deputy Registrar is aware or can judge, working fairly well in this district. In the early part of 1896 he addressed circulars to all the Field-cornets, Assistant Field-cornets, and District Mounted Policemen in this district, requesting them to make the requirements of the Act known to all the inhabitants, and to use their best endeavours to get all births and deaths registered as soon as possible after their occurrence.

^{*} NOTE, -They are provided with Burial Returns, -REGISTRAR.

In December last he again wrote to them requesting them to forward all birth and death forms which they might have on hand, and also to get all births and deaths in their respective areas which had not been reported registered as soon as possible.

The urban public are well acquainted with the requirements of the Act, and all births and deaths have been reported within the prescribed time.

The rural public have been made acquainted with the provisions of the Act through posters placed at the Field-cornet's and Assistant Field-cornet's residences, as well as all the shops in the district, and by the distribution, through the District Mounted Police, of the Government Notices published for their information.

The District Mounted Police were also instructed to make the provisions of the Act known to all farm servants and shepherds residing at outstations, and very little difficulty was experienced in this office during the past year owing, it is presumed, to the above instructions having been carried out.

George.—Births and deaths registration in this district is very fairly carried out by the Field-cornets who are materially assisted by the District Mounted Police whose services have been found invaluable in keeping the requirements of the Act before the public.

GLEN GREY.—No difficulty has been experienced in working the Act amongst the Europeans. In the case of the Natives, the Deputy Registrar regrets to have to report that there has been no improvement, and thinks the time has arrived when some change in the present system should be adopted.

Graaff-Reinet.—The Field-cornets of each ward, in conjunction with the corporals of the Cape Police, record births and deaths, and it is clear that great care and vigilance has been exercised by these officers in the working of the Act.

Since the amendment of the birth and death forms, the various difficulties experienced in the completion of the forms have been overcome. The Deputy Registrar is therefore not in a position to make any suggestion for the more effective administration of the Act, as he considers the forms convey any information required for the working of the same.

HANOVER .- Every means are taken to keep the requirements of the Act before the public, principally through the Mounted Police when on patrol, and also by circulars through the post. Although the Act is continually kept before the public the Deputy found, on happening to go into the rural district, that cases of births have not been reported, and that the parties were not aware that it had to be done; this is principally amongst the native class, although in one instance quite recently, in questioning a farmer whether he was not aware that one of his labourers had not reported the birth of his child, he replied that he was under the impression that only deaths had to be reported and not births. It will be found on reference that the births reported in the past year far exceed those reported in 1895, and although such is the case, the Deputy Registrar is positive that some births of natives are not reported, especially still births and cases in which the child dies within three or four days after birth, and it is simply an impossibility to trace these cases. The serving of vaccination notices in the country towns might be dispensed with. In conclusion, the Deputy Registrar begs to state that the working of the Act would be better carried out if Deputy Registrars received better remuneration.

HAY.—The Deputy Registrar in the village of Griqua Town and the Assistant Deputy Registrar at Postmasburg sign all the forms, the rest of the district is worked through medium of the Field-cornets and Police

Officers, the Inspector of Locations being Assistant Deputy Registrar for the locations Skeynfontein and Groenwater. The requirements of the Act are constantly kept before the public by means of the circulars received from time to time, which are distributed amongst the various Registering Officers. The Deputy Registrar requested the Sub-Inspector of Police to instruct his men to render every assistance by explaining to people what is required of them, as they visit every farm, it is the best means for explaining the requirements of the Act. Before the forms were simplified the most arduous portion of his duty consisted in the correction of forms sent in; these difficulties have been very much lessened by the introduction of new forms B. and D. 1 and 2. As a rule the Deputy Registrar takes the opportunity of explaining verbally to his assistants where they are most liable to err, and how to correct these errors. As a result very few forms are now being sent back for correction.

The Deputy Registrar has no suggestions to make for improving and rendering more effective the administration of the Act.

Herbert.—All Assistant Deputy Registrars, Field-cornets and Police Officers have repeatedly been instructed to keep the requirements of the Act before the notice of the public, both urban and rural, and consequently the Act is working very well in this district.

Having had but a few months experience, the Deputy Registrar has no suggestions to offer for improving and rendering more effective the administration of the Act in future.

Hopetown.—Notices are given to the District Mounted Police to distribute in the town and district. No difficulties are experienced whatever, and the Act is in very good working order and understood by every one. Mr. Van Reenen considers that the Deputy Registrar should receive some remuneration for the extra work thrown on his shoulders,—say an allowance of £25 per annum.

Humansdorp.—The residents in the urban, as well as those in the rural areas, are punctual in reporting births and deaths. The Field-cornets, with one exception, perform their duties well, and use every endeavour to obtain information of every birth or death occurring in their wards, and the Deputy Registrar does not believe that any occurrences remain unregistered in their respective wards.

The rural assistants, of which there are three, and the assistant Deputy Registrar at Hankey, have efficiently carried out their duties. The District Mounted Police when on patrol carry with them blank forms for the purpose of obtaining information in rural areas. It is suggested that remuneration at the rate of sixpence for each completed form be paid to them.

The general public have become fairly accustomed to the requirements of the Act, and no particular difficulty is experienced in the working of it.

One difficulty which presents itself is that in several of the Field-corneteies, more especially in that of Hankey, the Field-cornets are unable in some cases to state definitely the nature of the disease from which persons have died, owing to the fact that there is no medical man in their neighbourhood. Numbers of information forms have been received stating cause of death, "fever" or "inflammation," and have repeatedly been returned for further information as to cause of death, and in each instance the Deputy Registrar has been unable to obtain this. It is suggested that a further simplification be instituted as regards "Causes of death," as many persons are unable to state the exact symptoms of anyone's illness.

JANSENVILLE.—The public seem to be quite well acquainted with the requirements of the Act, and during his term of office the Deputy Registrar has experienced no difficulty as regards the carrying out of the Registration [G. 46—97.]

Law. He has no suggestions to make, as the present system seems to work well enough.

Kenhardt.—The Births and Deaths Act is now working as smoothly as could be desired, everyone seeming to know that when a birth or death occurs it should be registered.

Forms, notices, &c., that are received from time to time are always sent on to the Field-cornets and other officers employed in working the Act.

The only great difficulty still experienced in carrying out the provisions of the Act very effectively is the present prevailing drought, which prevents the poorer classes and a good many others from being able to make the necessary reports in the stipulated time.

Kimberley.—In reference to keeping the requirements of the Act before the public, form B. & D. 1, "Instructions," has been distributed throughout the district, as also Government Notice, "Warning," No. 1017, which was published in the local newspaper in a prominent place; both of these notices are affixed to the doors of the three offices. A large board has been fixed to the door of the head office, "Births and Deaths," with the hours of attendance. Ministers of religion and medical men have been asked to assist the Deputy Registrar by reminding their parishioners and patients of the necessity of registration.

The late Inspector of Locations was a great help to me, as it is trusted

his successor will be.

The Deputy Registrar is not aware that any further steps can be taken, presuming that the police throughout the district remember that it is their duty to assist, and do their utmost to carry out the provisions of the Act.

The new B. and D. forms are much simpler, and more pleasing to the public, not one complaint having been made since they have been in use.

King William's Town. — As Mr. Lacey only assumed duty as Deputy Registrar in this district on the 21st September last, he is not in a position to report very fully into the working of the Act prior to that date.

There has been a tendency towards improvement during the year. A special police force has taken the place of the Cape Police, who are absent on duty in connection with rinderpest, and Captain Landrey, who is in command, has been prevailed upon to allow his men to combine Registration of Births and Deaths, as far as possible, with their regular duties, and each camp has therefore been furnished with forms and full instructions. The Deputy Registrar has also paid visits to several kraals and explained everything to the people. The various headmen in the district who regularly attend at the office of the Special Magistrate are kept up to the mark. In fact everything is being done to make the requirements of the Law generally known and understood, and to remove superstitious ideas from the native mind.

With regard to King William's Town proper and urban areas generally the Deputy Registrar is satisfied that the registration is very fairly carried out. Brownlee's Station, Tsolo and Beazley Locations are showing improvement, and he has instructed the native policemen who reside in those locations to see that all events are reported, and they generally bring the people themselves.

Komgha.—The existing arrangements for working the Act are, as far as this district is concerned, satisfactory. The Deputy Registrar would again suggest that a payment of 6d. per form be made to members of the police. The public are reminded of the requirements of the Act by means of posters and through the police.

Knysna.—The details of the arrangements made for working the Act are complete, and the Deputy Registrar has therefore no suggestions to make for improvements. The new set of forms brought into use on 1st January, 1896, are very simple, and no difficulty is experienced in having them filled in. The Act seems now to be sufficiently known throughout the district, only two or three cases in the country having occurred of not registering births within the prescribed time, and the persons when questioned by the Field-cornet expressed their ignorance of having to register within a certain period, and their regret at not having done so, as being within the year registration was permitted.

Ladismith.—The arrangements made for working the Births and Deaths Registration Act, and for keeping the requirements thereof before the urban and rural public in this division, are as follows:—Seven Field-cornets and two rural assistants are engaged in the above work. They are supplied with forms and notices in the English and Dutch languages, for the purpose of distribution amongst farmers and others in their respective wards and areas. The two District Mounted Police, during patrol, leave notices and instructions at all farms and huts on farms as they proceed through the district periodically. They also make careful enquiries as to information regarding all births and deaths, and they record all information.

The Deputy Registrar can without hesitation report that owing to such measures hardly any difficulties are experienced, and he considers the working of the Act in this division at present is, comparatively speaking,

verv fair.

He has no suggestions for improving and rendering more effective the administration of the Act in future.

Malmesbury.—The Act is working very well. The requirements of the Act are generally known throughout the district, and are brought before the public through the Field-cornets, assistants, and mounted constable. Instructions have also been widely distributed. The constables occasionally remind the inhabitants of this town as to the necessity of reporting punctually.

MIDDELBURG.—In this district the Act is worked satisfactorily by the Field-cornets and their assistants, eight in number altogether, situated in different parts of the division; there have been no difficulties experienced during the past year in keeping the requirements of the Act before the public, and the Deputy Registrar has no improvements to recommend.

Mossel Bay.—The Act as it is being better understood, has worked fairly well during 1896. Of course it is difficult to impress upon men of mature age, little used to handle the pen, the necessity of accuracy in filling up the B. and D. forms so as to avoid errors or omissions, also in the absence of a medical man to expect a correct diagnosis of the cause of some deaths, as reported to the A. D. R., by a native informant.

The births in 1896 were 49 more than in 1895, and the deaths two less. Latterly there has been a large mortality amongst young children from whooping cough, but with this exception, the health of this division has

been good.

Murraysburg.—In the only urban area in this district (namely, the town of Murraysburg,) no special arrangements were made for working the Act, but the public is constantly reminded of its requirements, and the Deputy Registrar has found no instances in which births and deaths were not reported.

In rural areas the Field-cornets only record, and were from time to time requested to impress upon those living in their wards the necessity of

reporting births and deaths within the prescribed time. Government Notice No. 1017 (warning) of 1896 was also widely distributed, and every opportunity was taken by the officials to remind the public, but notwithstanding, there is still great lack of interest.

To a certain extent, some of the difficulties have been lessened by means of verbal instructions to the Field-cornets.

NAMAQUALAND.—In the district there are five rural and one urban assistants, while registrations are also effected by the Field-cornets, their assistants, and three or four Justices of the Peace. Circulars regarding births and deaths are frequently sent to all these for distribution, and are also handed to the police. Thus all who are competent, assist in keeping the

requirements of the Act before the public.

The difficulties before reported have not been overcome or lessened. There are many parts of the district extremely difficult of access owing to the want of water and food en route, where the natives are of the most ignorant type, to whom it would be almost impossible to explain what is required. Many of these people, however, have been driven by the continued drought to seek relief, and births have been registered which had taken place a year or more previous to their being discovered. The "cause of death" is generally very difficult to ascertain correctly. As a rule, the rural population is coloured, and not of a high class. There are only three doctors in this area, and they live within a radius of six miles. Consequently the majority of cases are not medically attended. If the deceased was feverish at any time during his illness, the cause "fever" is given. Symptoms one is quite unable to elicit from these people. This has given a great deal of trouble. The "age of deceased" is another difficult point to determine, the informant seldom being able to tell his own age even approximately. The work of administering the Act successfully in this division is difficult, the average distance of the boundaries from the Deputy Registrar's centre being over 100 miles and modes of communication

Oudtshoorn.—The requirements of the Act are now well before the public, and the difficulties at first experienced in the working of the Act have now been overcome. Field-cornets and others have now sufficiently grasped the regulations to render the registration of births and deaths in this district most satisfactory. The registrations for 1896 show a very marked increase over those of the previous year by over five hundred, proving beyond doubt that the working of the Act has taken greater effect in this district during the past year.

Peddie.—For the administration of Act 7 of 1894 this district is sub-divided into three urban areas, viz., Peddie, Bodiam and Bell, and a large rural area. There are also three Native Locations under special provisions of Section 35. Inasmuch as the two urban areas, Bell and Bodiam, are within a short distance of each other, one Assistant Deputy Registrar for both centres is found sufficient. Events occurring in Peddie Village are of course reported to the D. R. Office. Births and deaths in the rural area are most often reported to the Field-cornets of the respective wards. Occasionally informants give notice to the Cape Police.

In the Native Locations the several Inspectors receive the information. All public proclamations, notices, &c., bearing on the Act are posted up on notice boards by the A. D. R.'s and Field-cornets. They are also sent to the majority of the large farmers and to clergymen of all denominations in the district. The four prosecutions under the provisions of the Act have brought its requirements into prominence, and a knowledge of the same is now fairly universal.

Wrong impressions with regard to the necessity for the legal qualification of informants have entailed extra work, but the Deputy Registrar's assistants have now, to a great extent, mastered their duties.

A difficulty in the case of deaths arises with regard to medical classification from the fact that the average Field-cornet is naturally unable to discriminate between the various kinds of the same disease. The Deputy Registrar suggests that too great accuracy be not expected in this matter.

Another difficulty is the inability of the majority of the Assistants to spell native names correctly: the fact also that some natives adopt the surname of their father's, whilst others do not, causes some confusion.

On the whole a marked improvement on the previous year 1895 is perceptible with regard to the administration of the Act.

Philipstown.—The Act works well in this district and the results leave little to be desired. The public seem alive to their responsibilities, thus greatly assisting the Deputy Registrar in the performance of his duties.

PIQUETBERG.—The arrangements made for the working of the Act, and for keeping the requirements thereof before the public, are fairly satisfactory. The only real difficulty is the great distance many of the people in this district live from the domiciles of the Registering Officers, which accounts for their not reporting punctually. The Field-cornets take great interest in their work, and do their best to get the people to report punctually. The new form has been instrumental in overcoming a greater part of the difficulties experienced during 1895.

PORT ELIZABETH.—Since the present Deputy Registrar's appointment to the office for the district of Port Elizabeth, which dates from the 7th November, 1896, he has found that the provisions of the Act 7 of 1894 are understood by the majority of the inhabitants of this town and district, and more especially it seems by the natives, who appear very eager to register. Not a day passes but the office is besieged by them; they are always first and foremost to comply with the requirements of the Act. There are a few Europeans and others here and there who seem to be either ignorant or treat the matter with indifference. It is not for want of information, as advertisements, notices and placards are constantly being placed within their reach. Placards and notices are affixed in conspicuous places set apart for that purpose within the public buildings; verbal communications are also constantly made to them.

The registrations in the rural district are few, owing to the fact that

the population is scattered and not numerous.

At Bethelsdorp, a mission station in this district about six or eight miles from town, a Rural Assistant is stationed. He is also the pastor in charge of the mission. The population is of a mixed, but intelligent nature. The requirements of the Act are therefore fully impressed upon the memories of the inhabitants by the official mentioned. The Deputy Registrar has no difficulty to contend with from that quarter.

At Goedmoedsfontein a Field-cornet is stationed who carries out the duties of the registration for the different farms. Some difficulties are experienced by him in connection with the different diseases from which deaths occur, the informants being ignorant themselves of the different names of diseases, invariably stating the patient died from "fever"; in fact, as the Deputy Registrar has found from his own experience, every disease is styled fever with them. This may be overcome by causing a list to be published giving the names of diseases in the Dutch language; this has reference to the coloured classes alone.

The village of Walmer, which is directly under the supervision of the Deputy Registrar, is about four miles from town. From information

received, it is estimated to have a population of about 250 persons. There were registered during the year 1896 about 20 births and 7 deaths, the majority being coloured people.

Occasionally the Deputy Registrar experiences considerable difficulty in having burial orders returned to him after burial has taken place. On such occasions a list is handed by him to the native police, who are requested to collect same from persons mentioned in such list, with the result that all the orders are returned. The Deputy Registrar would suggest, if practicable, that some security be given by the recipients of such orders in a small sum of, say 2s. 6d., such deposit to be returned to persons lodging same on safe return of document, the Deputy Registrar to use his discretion in which cases to enforce this security.*

PORT NOLLOTH.—The Births and Deaths Registration in the urban area of Port Nolloth has, in the Deputy Registrar's opinion, been complete, the provisions of the Act being generally known and acted up to by the inhabitants.

As regards the rural area, he cannot be certain, but is inclined to believe it faulty, as it is almost impossible to get the required information from a population entirely nomadic. The Assistant to Deputy Registrar at Richtersveld does his utmost, but the difficulties are great.

PRIESKA.—The police have instructions, whenever they go on patrol, to remind the farmers and others of the requirements of the Act. Government Proclamation 1017 of 1896 has been widely distributed by this means.

There can be no doubt that, although the Act is generally known now in the district, a good many poor whites and native births and deaths are not registered, for the reason that the district being a very large one and the great distances some of the above classes reside from the nearest Field-cornet or J.P., make it almost impossible for them to comply with the requirements of the Act.†

PRINCE ALBERT. — The Field-cornets are carefully instructed both verbally and by letter as to the requirements of the Act, as most of the Field-cornets have had a considerable amount of experience, the work is being performed fairly well by them.

Notices are sent out to the rural population, chiefly by means of the police when on patrol.

The police usually carry a quantity of forms of Births and Deaths when on patrol, and if necessary fill them in.

With the exception of a few cases, all births and deaths are duly reported within the specified time. From this it is concluded that the provisions of the Births and Deaths Act are fairly well known by the inhabitants of this district.

QUEENSTOWN.—The arrangements for the working of the Act were the same as obtained during the previous year, except that in July the sublocations of Hackney, Cimicili, Mousa, Cibini and Umtwakazi were created an urban area, and removed from the operation of Section 35 of the Act.

It will be observed that 107 more births and 55 more deaths were registered than in 1895. These figures in my opinion are not accounted for by the apparent increase of population and increased death rate as compared with last year's returns, but by the fact that the requirements of the Act are now more generally known and complied with.

RICHMOND.—Entering on the duties of Deputy Registrar during the last few days of the year 1896, it is impossible for me to place on record a report which would be as valuable as one presented by an official who had

been performing the duty of registration of births and deaths for the whole period now under review.

As regards arrangements made for the working of the Act and keeping its requirements before the rural and urban public, it would appear as if full publicity had been given to any notification which would bring before a large section of the community alterations in their existing regulations.

No trouble has been given by the people in general in the "informing" of births and deaths; rare cases have, however, arisen in which some time has elapsed before any steps have been taken to comply with the regulations; the delinquents were farmers who failed to understand the pains and penalties which might follow for delay in non-registration.

One of the main difficulties which had to be contended with in the past was the delusion under which many of the natives laboured, that for the proper registration of a birth, the child must be produced to the registering officer as an actual and visible proof of its existence. This idea has to some extent died out. The Deputy Registrar points out that the number of illegitimate births amongst the native classes is out of all proportion to those born legitimately in the district. This is not to be wondered at as the majority of natives live in a state of concubinage.

It is suggested for the better administration of the Act in the Richmond district, that a Rural Assistant be appointed at Deelfontein, which is two and a half hours' distance from the nearest Field-cornet and five from Richmond.

Touching the matter of rendering more effective the system of births and deaths registration, it seems as if the present one embraces sufficient ground for all practical purposes. The fee paid for each form is, however, not sufficient attraction for Field-cornets and others to exert any special energy in seeing that registration is properly carried out. Nearly every completed form transmitted by a Field-cornet or Rural Assistant requires to be corrected by himself several times before being finally accepted for transmission to the central office.

RIVERSDALE —The working of this Act in outlying districts is carried on by the Field-cornets and Assistant Field-cornets, who take an interest in this work and keep the matter before the public in their respective wards. The fee of one shilling for filling up each B. and D. form is an incentive also.

There are two District Mounted Police who call at the houses on their patrols and fill up the B. and D. forms when necessary.

The public in general give no trouble, and like the Act. The only difficulty is when the people live in isolated parts of the district, such as near the sea-coast and Karroo, and are sometimes overlooked; but these cases are generally discovered, and the necessary information taken by the District Mounted Police and Field-cornets as opportunity offers.

On the whole the Act has worked satisfactorily, and no difficulty has been experienced beyond that stated.

ROBERTSON.—The several Field-cornets in their respective wards, and the District Mounted Police when on patrol, keep the requirements of the Act before the public in urban centres, and births and deaths are reported regularly

Former difficulties have been overcome as forms are now as a rule rendered more accurately, and but few are sent back to Field-cornets for amendment.

Somerset East.—The arrangements made for working the Act are the same as those adopted in 1895, and the requirements of the Act have been continually brought before the notice of the public, both rural and urban, by the Field-cornets, and by the Cape Police when on patrol, as well as by the distribution of printed notices.

^{*} Note.—The Regulations provide a fine.

† Note by Registrar.—The concessions allowed by the new form render the excuse of little avail now.

Since the withdrawal of the Cape Police on rinderpest duty, there has been some difficulty in getting births and deaths reported. The Deputy Registrar suggests that in the event of the police being retained on the border for any length of time, the several Scab Inspectors be appointed rural assistants, to whom births and deaths might be reported.

The Deputy Registrar has no other suggestions to offer for improving and rendering more effectual the working of the Act.

Stellenbosch.—The arrangements for carrying out the provisions of the Act in this district were similar to those mentioned in last year's report, and are most satisfactory. No difficulties of any importance have been met, and any neglect to register is the result of carelessness, and not any opposition to the law. The Deputy Registrar attributes the satisfactory working of the Act in this district mainly to his assistant under Regulation 8, who has been connected with the work since the Act first came into force, and who is a permanent resident of the town, having a thorough knowledge of the whole district.

The Deputy Registrar cannot but think that for the more effective administration of the Act, that the Deputy Registrar in each district should be an officer holding a more permanent office, and able to give more time to this special duty.

Steynsburg.—The police are constantly reminded in case of any events coming to their notice to warn the persons concerned to appear before the proper officer and effect the necessary registration: they are further instructed to keep the public generally well informed of the requirements of the Act. Field-cornets are also generally alive to their duties in this respect, and now appear, after the experience gained, to be fairly well qualified to render the necessary information in a proper manner. The Deputy Registrar has not experienced many difficulties, and is of opinion that the requirements of the law are well known throughout the district. The farming population visiting the town almost every week generally report direct to him, while the Field-cornets usually receive information and transmit the requisite forms in respect of native cases occurring within their respective wards.

Stutterheim.—In enforcing the provisions of the Act, the services of the Cape Police, or District Special Police, are extensively made use of, as it is found that in making their patrols they have ample opportunities of enquiry as to what births and deaths have occurred; Field-cornets have not such opportunities, and are unable to find out every birth or death which occurs in a ward thickly populated with natives. The urban areas within this district are not so large but that strict supervision can be exercised over them. After two years' experience of the working of the Act the Deputy is of opinion that the best results in rural areas are to be looked for in the zealous co-operation of the Cape or District Mounted Police, and it should be strongly impressed upon them that one of their main duties is to enquire and see that the provisions of the Act are complied with. With the extensive wards Field-cornets have to control they cannot be expected to know all that takes place within, however willing they may be to receive information of births and deaths when given at their residences.

SUTHERLAND.—The people of this district appear to be well acquainted with the requirements of the Act, and as the novelty of it has worn off, so have the majority of the objections formerly raised by them.

The Field-cornets and District Mounted Policemen have been utilised for the distribution of printed notices and "warnings" regarding the duties of persons concerned, in the event of births or deaths occurring, and in this way the requirements of the Law are kept before the public.

The Deputy Registrar cannot suggest any improvement on this system, which works well enough.

SWELLENDAM.—The arrangements made for working the Act and for keeping the requirements thereof before the urban and rural public are as satisfactory as can reasonably be expected. The difficulties experienced during the year 1895 have been materially overcome owing to the issue of the amended B. and D. 1 and 2 forms in the beginning of the year 1896. The Deputy Registrar has no suggestions to make for improving and rendering more effective the administration of the Act in future.

TARKA.—The Field-cornets, with one exception, have thoroughly grasped the requirements of the Act. Circulars have been issued to the urban and rural public bringing to their notice the more important sections of the Law in question, and the difficulties which have hitherto been experienced are now to a great measure a thing of the past.

The administration of the Act, as far as this division is concerned, is as thorough as a mixed population will allow of, but the coloured race, who at first appeared dubious as to the object of the law, seem now to appreciate the motive of the Legislature in framing this Act, and the Deputy Registrar finds, with few exceptions, they register the births and deaths within a very short time after the occurrence.

Tulbagh.—The registration duties are performed by the Assistant Deputy Registrars at Saron and Ceres Road, who do the greater part, and the Field-cornets of the several wards.

Judging by the very few instances in which births and deaths are registered after the stipulated periods, it is evident that no further assistance is required.

The fact of this district being small compared to the number of the inhabitants facilitates the efforts made to keep the requirements of the Act before the urban and rural public. The outlying farms are within easy distances of the Field-cornets, Rural Assistants and of the village of Tulbagh itself; and this fact, combined with the supervision of the District Mounted Police, who have been instructed to report cases which may come to their notice, renders it almost impossible for a birth or death to be left unregistered without it being discovered before any length of time has elapsed.

The simplified registration forms in use at present appear to answer the purposes of the Act admirably, and if the Field-cornets could only be induced to read the instructions on pages 3 and 4 of these forms, there would be no possibility of their continuing to make mistakes as at present.

UITENHAGE.—The late Deputy Registrar informs the present one that he was in the habit of constantly sending reminders to the police and Field-cornets to warn the public, and to constantly bring the matter forward when in conversation with them, also that he made a practice of doing so in his office.

In the town the police have instructions to report all births they hear of. The Deputy Registrar considers the Field-cornets, with one or two exceptions, now pretty well coached in the Births and Deaths work.

The withdrawal of the Cape Police from the district for rinderpest duty was a great drawback. However, the Deputy Registrar trusts to be able to have the District Mounted Police qualified within a short time.

Uniondale.—There are six Field-cornets and three Assistant Field-cornets, who all register and take an interest in the work. There is one Assistant Deputy Registrar at Haarlem, a small native village under a Village Management Board, about 18 miles from here, and he registers all births and deaths happening within its limits.

[G. 46—'97.]

The work is further facilitated by two Justices of the Peace, one at Roode Heuvel and the other at Commandant's Drift, who assist a great deal.

In addition to these there are four District Mounted Police who make inquiries on their patrols as to non-registrations, and who also register when required, each carrying a supply of forms with him, thus assisting the work very considerably in parts far removed from the Field-cornet's residence.

Since the issue of Government Notice, No. 1017 of 1896, which was freely distributed all over the district by Field-cornets and police, and explained to illiterate persons, the Deputy Registrar can confidently say that there are very few, if any, who do not understand the requirements and penalties of the Act, and he has therefore no suggestions to make for rendering the administration thereof more effective.

Van Rhyn's Dorp.—During the year 1896 the Births and Deaths Act has given considerably less trouble, owing probably to the fact that the Field-cornets have fairly grasped the requirements of the law. The Deputy Registrar fears, however, that all the births and deaths occurring in the district are not reported ewing to certain parts of the division being inhabited solely by nomadic Hottentots and others (of no better habits or education) who extremely fear the legal authorities, since their only visits to civilized parts are under escort of a policeman, and generally for some criminal offence. The Mounted Police have done good work on patrols, and their assistance has given an impetus to the successful working of the Act.

A suggestion the Deputy Registrar wishes to offer in view of meeting the law in regard to the registration of births is in connection with the christening of children. He has on one or two occasions found that several children attending the "Nachtmaals," &c., for this purpose have not been registered. This could be remedied by the person officiating being prohibited under a penalty from baptising children until a certificate from the Deputy Registrar, &c., is produced that the child has been registered. It would be a simple matter to grant a short certificate in these cases, and would be the means of securing registration of most of the births.

VICTORIA EAST.—The requirements of the Act are now generally known throughout the district. As a rule Field-cornets record all cases occurring in the rural area portions of their respective wards, and the Inspector of Locations alone registers cases in his locations; and hitherto such cases have been reported to him directly, chiefly through the medium of his Headmen.

In consequence of the frequent amendments and alterations in the regulations, the Deputy Registrar suggests that they be republished and printed as amended,* chiefly for the guidance of newly appointed Field-cornets and other Recording Officers, amongst whom changes constantly occur through resignations or otherwise.

VICTORIA WEST.—As to the details for arrangements made for working the Act, the Deputy Registrar is not in a position to report, having been in this district for only a few months. Late registrations are, however, numerous, and in most cases, upon enquiry, ignorance as to the requirements of the Act is successfully pleaded. The people on the whole take little or no interest in the provisions of the Act, and look upon it in the light of an evil forced upon them. Save in the urban centre the Deputy Registrar feels certain that numerous births and deaths, more especially the former, remain unreported. This refers especially to the native population, and it is sometimes by the merest chance that such cases are discovered. Farmers are disinclined, on account of the scarcity of labour, to send their servants

long distances to the residences of the Field-cornets for the purpose of registering births or deaths, and will themselves not take the trouble to note the information. At present, therefore, the provisions of the Act are certainly not being properly carried out, for to contend that the actual births last year in this district only exceeded the deaths by nineteen would be monstrous.

WILLOWMORE.—There is no doubt that the present Births and Deaths Forms 1 and 2 have lessened to a very great degree the difficulty experienced by the Field-cornets in being able to fill in the forms more readily and accurately than in 1895. There is still some difficulty in getting the uneducated natives to understand the necessity of lodging information within the prescribed time.

The Field-cornets, however, are in this division using great endeavours to carry out the work successfully, and from all accounts they appear to attain their object, as is shown by the substantial increase of both births and deaths registered last year above 1895. Births registered 1895, 313; births registered 1896, 383; deaths registered 1895, 156; deaths registered 1896, 266.

Wodehouse.—Very few difficulties have presented themselves during the year. The Field-cornets and police do most of the country registration and do it very well, the only fault the Deputy Registrar finds with them is the frightful spelling of names. Some names are altogether unrecognisable.

Worcester.—To keep the requirements of the Act before the public notices were constantly distributed by the police who were also supplied with forms whenever they went out on patrol.

No special difficulties were experienced during the year; the people reported punctually, and on the whole the Act worked well.

^{*} Note by Registrar:-Codified Regulations have been drawn up and are being printed,

Special Report of the Chief Magistrate of East Griqualand.

My report on this subject will necessarily be rather meagre, as, owing to the fact that Deputy Registrars are not required to communicate with me on matters relating to their duties, I have hardly any statistics at my disposal.

I may say, however, that the work seems to be carried on with the least possible friction, and any want of compliance with the law amongst the natives is due on their part more to carelessness than anything else. The proper working of the system depends to a great extent on the Headmen or Chiefs, for in general they are the medium of communication between the officials and the common people. It has occurred to me that much good might be done if the Headmen were to receive some slight remuneration for their services in reporting the births and deaths that have taken place in their respective locations, say 10s. for every 100 cases reported. I am persuaded that with some such inducement before them they would be stimulated to use their best endeavours to bring all cases to the notice of the Deputy Registrars.

Again, the various Magistrates might be advised that when the natives come forward to pay their hut tax, it would be a good plan to cause enquiry to be made of each man as to the number of births and deaths that had occurred at his kraal since the last payment of the tax. A rough record could be kept of the information so obtained, which could afterwards be compared with the registers when any omissions could be made good.

I have reason to believe that native servants are rather lax in regard to carrying out the duty imposed upon them in connection with registration. They are perhaps not so much to blame for this as their masters, with whom it may be said the question is one of profit and loss. Hence the farmers do not seem to be inclined to afford their work people facilities for fulfilling their duty by allowing them the time necessarily required for travelling to a Field-cornet's place, or the Deputy Registrar's office, in order to give information: and possibly under these circumstances the natives think that in reporting a birth or death to their employers they have done all that is requisite. To meet such cases I would suggest that it be made a matter of obligation for the master, whenever a birth or death occurred on his farm, to send notice to his Field-cornet or Deputy Registrar. A simple printed form might be provided for the use of the farmers, which could be sent post free. On receipt of such notice the Field-cornet or Deputy Registrar could take steps to have the birth or death, as the case might be, properly registered by a qualified informant.

Memo. by Registrar.—In reply to a telegram pointing out that servants may without leaving the farm report to their masters, the Chief Magistrate savs:—

"Yours yesterday. Just so. But employers won't take the trouble to fill in forms. If they were obliged to report birth or death on farm, Deputy Registrar could take steps to get same registered."

Maclear.—The arrangements made for working the Act are as follows: Notices in this office and at the offices of the Field-cornets are conspicuously posted. No difficulties have been experienced. Headmen report periodically.

MATATIELE.—The whole of the work in connection with the registration of births and deaths is done in the office, there being no assistants. The difficulties with natives are very great. Headmen frequently do not know, and people do not always report to them. A suggestion was made last year that Missionaries should be asked to undertake the duty, and that they receive an annual allowance. The Deputy Registrar is constantly speaking to the Headmen on the subject, and believes they do their best to induce the people to register.

Mount Ayliff.—The detailed arrangements for working the Act are carried on just as they were commenced, which has proved very satisfactory. The Headmen are held responsible for the registration of all births and deaths among their people; up to the present the natives in this district carry out the provisions of law. Each Headman is expected to report all births and deaths once a week, and the Deputy Registrar has no doubt but that this is done

All the registration is carried out in this office by the Magistrate personally; there are no assistants nor other centres in the district.

Mount Currie.—The motives of Government in passing this Act are no longer viewed with suspicion by the natives in this district, at any rate no difficulty is experienced in getting them to register on that ground.

The chief obstacle to a proper registration is the indifference shown by the natives in general, who cannot be got to see the advantages of the system.

The machinery for working the Act is now both simple and effective, and the Deputy Registrar does not see at present how it can be improved.

The number of registrations might be increased if the Field-cornets could be induced to interest themselves more in the matter.

MOUNT FLETCHER.—The Deputy Registrar is pleased to be able to report that the births and deaths regulations have up to the present worked most satisfactorily in this district. The population, consisting chiefly of natives, make their report of births and deaths either personally, by their Headmen, or through their relatives, and he has no suggestions to offer.

Mount Freez.—The Headmen in each ward have been instructed to report all births and deaths, as these are invariably reported to them by the people.

At public meetings and on every opportunity the provisions of the Act and its requirements are explained to the people.

In the case of the death of an adult no difficulty is experienced. Births are reported by some regularly, but the majority of the natives never, in giving the number of their families, include small children; and to report a child's birth is, to them, an absurd fancy of the white man.

The Deputy Registrar has not had sufficient experience in the administration of this Act to offer any suggestions for improving it, but is of opinion the fewer changes there are and the simpler it is, the more effective will be its working. Natives are at all times suspicious of changes, and they are hardly acquainted with the present simple forms to be observed.

In his opinion they should continue as they are for the present, unless some simpler scheme can be brought out.

UMZIMKULU.—Copies of circulars and Government Notices concerning registration of births and deaths have been distributed from time to time to Field-cornets, Assistant Deputy Registrars, J. P.'s, and others, throughout the district for the information of the public. The European portion of the population is comparatively small, and no difficulty has been experienced in

regard to registrations so far as they are concerned. With respect to the large native population, considerable difficulty has been met in obtaining a report from Headmen or other informants. Some Headmen are careful to report regularly all the births and deaths occurring in their locations, others more distant from the seat of Magistracy are careless, and the Deputy Registrar feels sure all births and deaths are not reported. Every effort is made to obtain reports, and on every occasion of a Headman coming to the office, he is not allowed to leave before he has been asked whether he has not any reports to make, and reminded of his duty in that respect.

The recent disturbed state of the natives of this district, caused by the Griqua agitators, has doubtless been a hindrance to this work being regularly and properly earried out.

Special Report of Chief Magistrate of Tembuland and Transkei.

As I think I have before pointed out, any laws may be enforced amongst the natives of these territories by applying drastic measures for their observance; but no regulations, whether applied by Act of Parliament or Proclamation, will have any effect in uprooting the deeply embedded suspicions and superstitions of the native races. There is a firm belief amongst the masses of the people that Government has some ulterior object in wishing to keep a register of births, and that it can be of no interest or no consequence to anyone but the parents whether infants die or live, unless there is behind it some object unexplained. Until these people are much more advanced in civilization, and have more confidence in the intentions of the Government towards them, it will be impossible by any means, excepting severity, which I think no one is at present prepared to recommend, to enforce registration of births or of deaths of any excepting adults. Even if full effect could be given to the Registration Act, owing to tribal and domestic customs amongst the people, it would be far more troublesome and costly to keep a correct record than would be the case in an European

Children, when born, are not baptised, except amongst Christians, who are very few in these territories, and many of those I find are quite as superstitious as the heathens; names are given to children at, or soon after, their birth for the purpose of distinguishing them, as you or I would to a dog or any other animal, but these names do not adhere through life; for instance, names of boys are frequently changed at the time of circumcision, those of girls on marriage, and in neither case very often do they bear the least resemblance to or connection with former names, or to those of the families from which they sprung or into which they are admitted. It can therefore be very easily imagined the amount of work and difficulty that would be experienced in attempting to keep a correct registration of the native population in these territories. In my opinion it would be wise to be satisfied with the tolerably accurate returns that are obtained by taking a

census. To attempt anything very far in advance of that would at the present time, I think, be almost hopeless, and might stir up an undesirable feeling amongst the people.

ELLIOT.—The provisions of the Act are now well known. There is nothing particular to remark upon except that it is significant that no one has taken advantage of the privilege by which an informant may fill up a form himself, in the presence of a witness, and send it direct to the Deputy Registrar.

ENGCOBO.—The working of the Act appears to be progressing more favourably than at first, though the Deputy Registrar is of opinion that a large number of births and deaths are still unreported by the natives, and in order to make the working of the Act more satisfactory he suggests that each Headman receive an allowance. This he has no doubt would encourage them to make periodical visits through their respective locations to discover births and deaths which have not been reported.

There are no urban areas in this district with the exception of the village of Engcobo, which did not become an urban area until the 14th December, 1896.

MQANDULI.—The Deputy Registrar regrets to report that the manner of carrying on the operations of Act 7 of 1894 in this district is simply a farce. The natives have, he believes, signified to Government their great objection to registering, and have done nothing further in this direction. It is, however, very necessary "to get the thin edge of the wedge in first." More pressure will now be brought to bear on the subsidized Chiefs and Headmen, when some success is anticipated.

St. Mark's.—Numerical registration is carried on in this district among the natives and is working most successfully.

UMTATA.—The European population here is not very large, and a birth or death does not take place without it being generally known. If such is not reported a message is sent to the parties concerned to have it registered. Births and Deaths taking place amongst the native locations are reported by the headmen quarterly. The registration among the natives is a numerical

XALANGA.—The subject has been kept before the people through the headmen, and notices published. The natives have raised no difficulties in the working of the Act, and favour it rather than otherwise. The only difficulty found is to keep them up to time in reporting. The Deputy Registrar cannot suggest any improvement.

PORT St. John's.—The arrangements made for working the Act:—All officials and the police are instructed to report at once any birth or death coming to their notice. No great difficulties have been experienced, and the Deputy Registrar has no suggestion to make as the present method of registering has worked well.

BUTTERWORTH.—There is nothing of much importance to report under this head. The arrangements made are still the same as those made during the previous year for working the Act, and the requirements thereof are kept before the natives by the headmen and also by the officials when occasion arises. With regard to the European population of the district, they all appear to be well acquainted with the requirements, and are aided in that respect by the Field-cornet of the Nthlambe Ward, through whom notices from Government are from time to time distributed amongst the people. There have been no special difficulties experienced during the past year to overcome, and the administration of the Act appears to be quite effective.

IDUTYWA—The requirements of this Act are kept before the public by posting up on the notice board all new instructions and alterations which from time to time are received. As regards natives, any changes are notified to them by the Magistrate at a meeting called for the purpose.

A numerical register is kept for the native births and deaths, and the necessary information is supplied by each headman at the end of each quarter. The headmen were at first rather negligent about this matter, but on being warned that, in the event of their failing to report every birth and death in their respective locations, their subsidy would not be paid to them, they brightened up, and are now very careful and particular about their returns.

As far as the European Registration is concerned, no comment can be made, as the past two years' experience has been very limited, as will be seen by the small numbers figuring on the returns.

Kentani.—As applied to Europeans, there is no difficulty in working the Act. There are only a very limited number of Europeans in the district, and these comply with the requirements of the law without any pressing.

The natives show no opposition to the law, but although they register a large number of Births and Deaths, there remains a large percentage which are never registered. It is difficult to deal with this question for the reason that in a large and thickly populated native district it is simply impossible to detect these cases, as the number of police at each Magistracy is not sufficient for ordinary purposes, and can therefore spare no time for this work. The headmen are used to assist in keeping the Act constantly before the people, and they are also supposed to see that all cases are reported, but whether they carry out the work thoroughly is a very doubtful question. The cause of death is arrived at by questioning those who report it, but the Deputy Registrar cannot say that he believes the returns under this head to be even approximately correct. At the same time, there is no other way of getting the information, as the majority of natives do not employ doctors.

NQAMAKWE.—In so far as the European population goes, the number of registrations is so small that there are no difficulties to overcome. Each birth and death which has occurred has been immediately notified and registered accordingly.

As regards native births, the Deputy Registrar regrets to have once more to report that he has not been able to induce the natives to register the births of their children. The native is an extremely suspicious being. When the Act was first promulgated he got the idea into his head that Government wanted to—as he expressed it—"ear-mark" the children. The Deputy Registrar has taken the utmost pains to point out to the Fingoes the utter preposterousness of this idea, more especially under the system of registering mere numbers without giving any names whatever, but the old idea remains and cannot be eradicated.

Tsomo.—No difficulty has been experienced in the registration of births and deaths in this district during the past year.

The headmen of the several locations invariably appear at this office with natives, who register either births or deaths; and in some instances births and deaths are recorded by missionaries.

The Act is working well, and the Deputy Registrar cannot suggest any improvements in the present system in vogue.

Walfish Bay.—The Deputy Registrar has little to add to his remarks of last year. Births and deaths are regularly reported with praiseworthy punctuality. The police are instructed to remind the native population of their obligations, but even this precaution is scarcely necessary. The people respond readily to any calls made upon them. No difficulty has been experienced here in connection with registration. It should, however, be remembered that prior to the passing of the Act the majority of the native population had acquired the habit of reporting at the Magistrate's quarters or at his office any birth, death, or other event looked upon by them as important that occurred in their families. Thus the application of the new law merely somewhat extended a familiar custom, and the usual suspicion with which an innovation is regarded in the native mind was thus avoided.

GORDONIA.—All notices are published on a board at Public Offices and sent out through the Police, and to Field-cornets, also notified by clergymen.

No great difficulties have been experienced except in the registration of births and deaths of Bushmen who live in the desert; otherwise pretty well all births and deaths are registered.

Besides this, of course, there is the difficulty of getting educated men as Field-cornets.

KURUMAN.—Notices were put up at the offices of the Deputy Registrar and his assistants, and verbal explanations of the requirements of the Act were given to the rural public. For the purpose of keeping this subject always before the public it would be of great value if it be a standing instruction to members of the Cape Police when on patrol to constantly remind farmers and those whom it may concern that the Registration of Births and Deaths is compulsory, and if the police officers see that the instruction is carried out.

MAFEKING.—Circulars and printed forms have been sent to ministers of religion, medical practitioners, J.P.'s, Field-cornets and police officers, and also to the principal inhabitants of the district, explaining the requirements of the Act. Police officers have been instructed to note all cases coming within their notice while out on duty. Up to the present the Act has been working well in this district. It has only been in force now for little over a year. In a couple of cases the defaulters pleaded ignorance of the actual requirements of the Act, and being of a very illiterate class their statements were considered bona tide.

Rinderpest has been a great obstruction to a certain extent. Farmers have lost all their cattle, and those living at isolated places have now no proper means of conveyance to the nearest Field-cornet or J. P. This, the Deputy Registrar is afraid, will more than once be brought forward as an excuse in cases of default in not reporting the required particulars in the proper time.

VRYBURG.—The working of the Act in this district is carried out by the Deputy Registrar, one Rural Assistant and eight Field-cornets, the assistant being stationed at Taungs. Prior to 1st July last there was a Deputy Registrar stationed at Taungs, but on the re-arrangement of the Vryburg district, and Taungs being no longer a judicial District, an Assistant (Rural) only was appointed there. In order to keep the public informed of the requirements of the Act, notices relating thereto are posted in all conspicuous places and copies sent to the various Field-cornets and Justices of the Peace requesting them to give publicity to the same.

The forms sent in by the Field-cornets during the latter portion of the year show that more attention is paid to the regulations when filling them up, though there is still much room for improvement.

[G. 46—'97]

The great difficulty experienced here is in obtaining a complete registration of all births and deaths in the native locations, and as will be seen from the low numbers, every occurrence could not have been registered. seen from the low numbers, every occurrence could not have been registered. The system that obtains at present is very unsatisfactory. The Chiefs or Headmen of each location keeps sticks on which each event is recorded by cutting notches, and the police when on patrol make up returns therefrom; only three returns have been furnished. The police find great difficulty in getting proper registers kept. The Deputy Registrar suggests as a means of obtaining more complete registration, that the police officer in charge at these locations be appointed a sort of assistant for native locations only.

DISEASES, 1896.—PARTIAL RETURN.

No. 1.—Return. for the Cases enumerated in the following Table, of the Causes—the Races and Seres, being distinguished,—of the Deaths (detailed by Classes) which occurred in certain Districts in 1896, and had been Registered up to the 15th January, 1897.

Note.—A considerable number of Births and of Deaths that were "Registered" in 1896 actually occurred in 1895, the first year of a general Registration system.

Note.—The detailed returns by Ages and Races of the Causes of Deaths in each of the Chief Towns have been completed and handed over to the Health Department. As the figures have been communicated to the Newspaper Press for local publication, and will, after re-arrangement, shortly be published in the Health Report, it does not appear necessary to reproduce them in this paper. The first return was finished on the 17th February, 1897, and the last of the set on the 17th instant.

COLONIAL SECRETARY'S OFFICE, REGISTRATION DEPARTMENT, 22nd March, 1897.

DEATHS, 1896.—PARTIAL RETURN.

No. 2.—(Continued from page 3)—Return, for Urban and Rural Areas for certain Districts, of the Number of Deaths (those of Whites distinguished from those of All Others, and Male from Female), which occurred in 1896, and had been registered up to the 15th January, 1897.—Continued.

COLONY PROPER	(Exc	luding I	Bechuana	land)	3690	2926	9972	9012	13662	11938	2560

Colonial Secretary's Office, Cape of Good Hope, Registration Department, 13th April, 1897.

MEMORANDUM ON STATISTICAL RETURN OF MARRIAGES, 1896. I.—WEDDING DAYS.

A Friday is evidently an unpropitious day for the solemnization of the marriage ceremony, as out of 7,853 marriages only 164 or 2.09 per cent. (compared with 2.04 per cent. in 1895) of the whole took place on that day. Tuesdays were most frequently selected, 39.04 per cent. occurring then (38.49 in 1895), Mondays coming next with a percentage of 33.33 (35.47 in 1895), while only 1,088 happened on Wednesdays, 451 on Thursdays, 254 on Sundays, and 212 on Saturdays

Upon six days in 1896, four times on a Friday in March, June, July and December, and once on a Saturday in October and a Sunday in July, no weddings were held. Sixteen days are credited with one marriage each. The highest number, namely, 88, on the contrary is recorded against the 16th October, with 82 on the 9th May and 21st July. The largest number in a full week was 197 in the seven days ended the 25th July, and the lowest 113 in January.

II.—RELIGIOUS DENOMINATION.

In 7,224 cases banns were called by Ministers of Religion or by Resident Magistrates,

the remaining instances, 629 (8 per cent.), being by licence.

The number of marriages before Protestant Clergymen was 7,253, before Roman Catholic 158, and before Jewish 25, while 417 (or 5 3 per cent., compared with 4 4 per cent. in 1895) were dealt with by Magistrates, under the provisions of Act No. 16 of 1860.

The majority of the parties wedded belonged to the Dutch Reformed Church, the percentage for which is 31.44, the Church of England follows next with 1,553 cases, which was 163 in advance of the Wesleyan Methodists, while London Missionary Society and Independents combined show 798 marriages. 12:31 of the unions were registered in the Native Territories.

III.—EDUCATION OF PERSONS MARRIED.

The degree of education possessed by the contracting parties is indicated by the fact that the husbands signed by mark in 511 cases, i.e., 6.5 compared with 6.96 per cent. of the whole in 1895, wives in 420 (5.35 and 5.35 per cent. respectively); both in combination in 1,811 (23.06 and 25.14 per cent.), whilst in the other 5,111 instances, or 65.09 and 62.55 per cent. in 1896 and 1895 respectively, the parties wrote their autographs. There is therefore a noticeable advance in the 12 months in the way of education. The proportion per cent. of illiterates was in 1895 for husbands 32.08, and it now has fallen to 29.56; for wives it was 30.56, and it now is 28.40.

IV.--FORMER CONDITION OF PERSONS MARRIED.

Of the 7,029 Bachelors, 6,817 wedded spinsters, 204 widows, and 8 divorced wives; again of the 812 Widowers, 570 were united to spinsters, 239 to widows, and 3 to divorced wives; lastly, of 12 Divorced Husbands, 9 were joined to spinsters and 3 to widows.

V.—AGES IN COMBINATION OF PERSONS MARRIED.

The completeness of an interesting comparison of the ages in combination of Husbands and Wives is spoilt by the registration of 185 persons (18 males and 167 females) simply as "Minors," and 6,254 (3,302 males and 2,952 females) as "Majors." The *folding-sheet may be read as follows:—18 males below 21 years of age married females, 7 of whom were below 21 years and 10 were of full age, while 1 was 22.

To instance a few cases of disparity of age it may be mentioned that a man of 32 married a woman of 61, another of 90 a woman 48 years younger than himself, again one of 51 a girl of 16. Of the husbands 246 (3·1 per cent.) were minors, and of the wives 2,101 (26·75 per cent), while 7,607 bridegrooms were of age against 5,752 brides. In 1891 at the census date there were 23 males and 86 females below 15 years of age returned as married, and 1,019 males and 261 females of 85 years and more.

CONCLUSION.

Mr. Douglas Barry, who prepared the accompanying statistical returns, and who is in charge of Marriage Registers, deserves special commendation for his excellent services.

A. C. D.

Colonial Secretary's Office, Cape of Good Hope, Registration Branch, 15th April, 1897.

mc 3INATION, 1896.

CAPE OF GOOD HOPE.

FINAL REPORT OF THE REGISTRAR OF BIRTHS AND DEATHS FOR THE YEAR 1896.

Presented to both Houses of Parliament by command of His Excellency the Gobernor.

GENERAL SUMMARY, 1895 AND 1896. (As taken out to 15th August, 1897).

GENERAL SUMMARY, 1895 and 1896. (As taken out to 15th August, 1897).

In making any comparison between the number of Births and of Deaths registered as having occurred in 1895 and 1896, it should be borne in mind (a) as regards the Colony Proper, that in the Glen Grey (Native) District the decrease is mainly attributable to the exceeding difficulty of inducing the peasantry to report events, and (b) as regards the Transkeian Territories that the fluctuations are due in great measure to the deeply rooted Native supersitions, which were most conspicuous in 1895 in the Elliotdale and Umtata Districts. In Nqamakwe reports had to be accepted in 1896 without distinction of sex. Further the annexation of Bechuanaland only took place on the 15th November, 1895: consequently reports were rendered for six weeks as against 52 weeks in 1896. For these reasons the gross totals have not been shown in the tables which accompany this Report: they are however given below for males and females of the three main races for the two years. The numerical system it may be remarked is in operation in Elliotdale, Mquanduli, St. Mark's and Umtata Districts in Tembuland, in Idutywa and Nqamakwe Districts in the Transkei, and in Mafeking and Vryburg in Bechuanaland. It may be taken as fairly certain that all Deaths of 1895 and nearly all Births of that year likely to be reported, are included in the subjoined tabular statement.

Chief points of difference between preceding statement and returns published later on in this Report.

Thirteen Births which occurred in 1895 have been added to figures previously published: of these 3 were European or White. Three Births happened in George District, 2 in Graaff-Reinet, and 1 each in Herbert, Komgha, Middelburg, Namaqualand, Peddie and Stutterheim, and 2 in Tembuland. The 1895 Death returns

207 Births of 1896 were registered between the 15th April and 15th August, 1897—88 being of White children, and 101 Deaths, 14 being of Whites. 184 of the Births and 93 of the Deaths took place in the Colony Proper.

These events (births in particular) are well distributed over the Colony, thus:--

Aberdeen 2 Colesberg 3 King William's Tn 4 Robertson 19 Albany 13 Cradock 5 Knysna 3 Somerset East 5 Albert 2 East London 4 Komgha 4 Steynsburg 1 Alexandria 2 Fort Beaufort 4 Ladismith 2 Stockenstrom 1 Aliwal North 1 Fraserburg 3 Malmesbury 7 Stutterheim 1 Barkly West 7 George 3 Middelburg 1 Swellendam 4 Bathurst 3 Glen Grey 2 Mossel Bay 1 Tarka 1 Beaufort West 4 Graaff-Reinet 1 Murraysburg 1 Uitenhage 5 Bedford 1 Hanover 1 Namaqualand 3 Victoria West 2 Bredasdorp 1 Hay 4 Oudtshoorn 2 Willowmore 4	District. 57 (All Coloured Cases) of the 93 Deaths supervened in Barkly West District; 9 in Bathurst; 3 in Calvinia: 2 each in Alexandria, Aliwal North, Carnarvon, Peddie, Robertson; 1 each in Albany, Albert, Clanwilliam, Cradock, Graaff-Reinet, Hay, Herbert, Malmesbury, Paarl, Piquetberg, Somerset East, Uitenhage, Victoria West and

USES OF REGISTRATION

The 28th Annual Registration Report of Michigan, U.S.A., states briefly six of the leading uses of vital statistics, and we cannot do better than preface this Report on Cape events with the admirable exposition given in the American Publication, thus:-

- 1. "Registration affords an invaluable personal record of the principal events in the life of each individual for
- all legal and genealogical purposes."

 2. "It affords a 'first line of defence' against certain crimes, especially those perpetrated upon children at the defenceless ages and upon women.
- 3. "It gives information of the presence of dangerous communicable diseases in time to restrict them in many
- cases."

 4. "It affords information as to the unsanitary condition of localities, thereby suggesting sanitary investigation and the removal of causes of sickness. It enables the conditions of the public health in different parts of the same state or in different states and countries to be compared, and specifies the diseases most prevalent in different places. Vital statistics are the handmaid of sanitary science."

 5. "Vital statistics present important data as to the social condition of communities, such as the frequency and fecundity of marriage, the prevalence of divorce, and variations in the rate of natural increase."
- 6. "The importance of vital statistics as an element of the movement of population can scarcely be overestimated.

 Census enumerations present the population of a state or country at a definite time, but, unless taken at unusually frequent intervals, show nothing of the process of growth in itself."

POPULATION.

The number of persons in the Cape Colony, excluding British Bechuanaland and Pondoland, but including the Transkei, may be taken to have been 1,821,551 on the 31st December, 1896, and in the Colony Proper, 1,166,115. Pondoland is not subject to the provisions of the Births and Deaths Act, and of Bechuanaland only a partial Census was taken, the native population living in reserves being estimated.

IMMIGRATION AND EMIGRATION.

According to the published Customs Returns, the excess of arrivals by sea of passengers—not military and naval—over departures, between the first January, 1891 (the Census year) and the 31st of December, 1896, was equivalent to 59,896 adults, practically all Europeans.

PASSENGERS BY RAIL.

On pp. i. and ii. of the Preliminary Report 1896, the detailed figures supplied by the Railway Department are shown. The main results may be recapitulated as follows:—

		European		Coloured		
	Infants.	Under 12.	Adults.	Total.	Total.	
Proceeding to Cape Colony 1896, via Norval's Pont Railway Station	2094	4224	38203	44521	6255	etako ese Arres are
Mafeking (revised)	47	127	12992	13166	6010	
	2141	4351	51195	57687	12265	
Proceeding from Cape Colony 1896, via Norval's Pont Railway Station	2104	4588	45258	51950	8395	
Mafeking (revised)	29	115	9802	9946	4432	
	2133	4703	55060	61896	12827	

It follows therefore that 4,209 more Europeans left the Cape Colony in one year by the Railway Systems passing Norval's Pont and Mafeking, than entered it in the same manner.

REVENUE.

The total revenue collected in 1896 was £102 14s. 0d. against £64 10s. 6d. in 1895. It may be mentioned moreover that £42 3s. 0d. was paid in 1896 on account of certified copies of Marriage Registers.

The fee for alteration or assignment of a child's christian name is 2s. 6d.; for a search 1s. for each year or part of a year; for a certificate 5s. (If the certificate is authenticated by the Under Colonial Secretary an extra fee of 15s. is payable). For Marriage certificates the charges are—for a particular search 2s.; for a general search 4s.; for a certificate 15s.

EXPENDITURE.

In the financial year ended 30th June, 1897, expenditure amounting to £3,752 (including arrear claims) was brought to account compared with £2,444 in 1895-96. The payments on account of printing and stationery were £150, against £622 in the previous financial year.

RACE DISTINCTION.

The general instructions to the Public require that the following main race distinctions should be observed, vizt.: (1) European or White, (2) Malay, (3) Hottentot, (4) Fingo, (5) Kafir and Betchuana, (6) Mixed and Other, and it is possible that the determination of race is fairly correct except perhaps occasionally as regards "Hottentots." Quoting freely from the Report (1891) of the Census Director it may be stated that the European or White population consists of the descendants of the original Dutch Colonists and French Refugees and of the immigrants, chiefly of British and other Teutonic races, who more recently entered the Colony. The Malay class, consisting of only 13,907 souls at the Census date, owes its distinctive existence rather to the bond of a common and uniform faith than to any feeling of race. As its name implies it is of Asiatic origin. Hottentots—the name given to the aboriginal natives with whom the Dutch pioneers first came into contact—include a sprinkling of Korannas and Bushmen. But it will no doubt be found that the term "Hottentot" is used as synonymous with "mixed." The number of pure bred Hottentots can be but small. The Fingoes form part of the Bantu family, but were separately considered in the Census tables in consequence of the peculiar relations in which by force of circumstances they stand to the Colony and of their progress in civilization. Kefirs and Betchuanas include—taking them in order of numerical importance—Amaxosa, Tembu, Basuto, Pondomise, Baca, Bechuana and other similar tribes. Mixed and Other Coloured Races include the great and increasing population which has sprung from the intercourse of the Colonists with the indigenous races, and Indians, Chinese, Mozambiques, Griquss, &c. Thev also comprise children born of parents belonging to different elements of five of the main races. The fusion of Fingoes (a commercial peaceful people) with the warlike Kafirs and Betchuanas is proceeding more rapidly than might have been expected, and it has been often found convenient

often found convenient for statistical purposes to group these Races.

Mr. Cleverly (the D.R. of Walfish Bay District), in a special report dated the 30th July, 1897, points out that the District under his charge occupies an unique position amongst the group of Colonial Dependencies as regards its population, as well as in some other respects. Here (he says) we have "to deal with a for the most part pure Hottentot (Namaqua) Race, differing from that called by the same name south of the Orange River. Here the difference of the clans is well marked and the old tribal distinctions are observed. It naturally occurs to me that the vital statistics of these people if kept distinct from those of the impure breeds loosely called 'Hottentots' in the Colony Proper would be of great and abiding interest. The Namaqua Races are certainly dying out. Will the fraction here living under Colonial Law show the same fate? linger on as a strange survival of the fittest or merge in a Mixed Race."

Note by Registrar.—The returns for Walfish Bay and for every District are separately tabulated. The D.R. brings forward a good argument in favour of an attempt to get full statistics on B.D. 1 and 2 regarding Births and Deaths in his District.

The proportion of each race to the total population of the Colony in 1891 was as follows:—European, 24.68; Malay, 0.91; Hottentot, 3.30; Fingo, 15.04; Kafir and Betchuana, 39.84; Mixed and Other, 16.23.

PROPORTION OF THE SEXES, 1891.

It was established by the Census figures that to every hundred males alive on the 7th April, 1891, there were 99.03 females. When, however, the Races are considered separately, conspicuous variations are noticeable, thus the proportion for Hottentots was 91.97 for every 100 males; for Europeans, 92.38; for Kafir, 98.43; for Mixed and Other, 101.13; for Malay, 107.17, and for Fingo, 111.56. In the District of Kimberley the employment of a large male population in the Diamond Mining industry accounts for the low proportion of females, vizt., 56.82 in 1891. This cause still operates to render so striking the present disproportion between Births and Deaths at Kimberley and Beaconsfield.

PROPORTION OF THE SEXES, 1896.

It appears to be the general rule in European countries for male births to exceed the female. An exception will be noticed in this Colony as regards most of the Native races.

Taking the figures for the Colony Proper for 1896, we can derive the following percentages, vizt.:—

European	Race.	To each 100 girls. 102:37 boys	To each 100 boys. or 97.69 girls.	Race.	To each 100 girls. 102:54 boys	or	To each 100 boys. 97.52 girls.
Hottentot Fingo, Kafir	and Betchuana	104·16 ,, 99·65 ,,	96·01 ,, 100·35 ,,	Mixed and Other All Races Other than Europea	102.15 ,,		95·87 ,, 97·90 ,, 98·02

Placing the figures above quoted alongside of those given in the Census Table, the following interesting comparison attracts attention, vizt.:—

Race.	emales alive 7th April, '91, to every 100 males.	Females born in 1896, to every 100 males.
Hottentot	91.97	96·01
European	92.38	97.69
ringo, Kanr and Betchuana	101.86	100.35
Mixed and Other	101.13	95.87
Malay	107.17	97.52

A comparison of the Census Results for 1891 and 1875 as regards the Old Colony, i.e., excluding Griqualand West and the Transkeian Territories, proves that the number of Females to every 100 males of each race (except tots, and ½ per cent. for Kaffirs and Betchuanas.

BIRTHS

GENERAL COMPARATIVE SUMMARY. COLONY PROPER 1895 AND 1896, WITH PROPORTIONS.

Events having been extracted to 15th April 1897, the grand total of (a) Births for 1895 computes to 46,166 and for 1896 to 50,116: the Bechuanaland returns for the earlier year however only include Births for 6 weeks. The figures for Walfish Bay are small, only 20 and 20 respectively, while for the combined Transkeian Territories they are 8,229 and 10,873. For purposes of comparison it is expedient to restrict attention to the Colony Proper, although even then in some of the areas like Glen Grey carrying an overwhelming Kafir, Fingo and Betchuana population, birth reports owing to the strong prejudices of the people are manifestly imperfect. The figures are:—

Sex and Year,	White.	Malay.	Hottentot.	Fingo, Kafir and Betchuana.	Mixed and Other.	Total other than White.	Total.
M. 1895	7423	278	1328	5403	4746	11755	19178
M. 1896	7051	282	1577	5765	4693	12317	19368
F. 1895	6914	285	1280	5473	4682	11720	18664
F. 1896	6888	275	1514	5785	4499	12073	18961

The undermentioned percentage proportions are calculated on these figures, vizt.:-

M. 1895	38.71	1.45	6.92	28.17	24.75	61 · 29	100.00
M. 1896	36.41	1.45	8.14	29.77	24 · 23	63.59	100.00
F. 1895	37.20	1:53	6.86	29.32	25.09	62.80	100.00
F. 1896	36.33	1:45	7.98	30.51	23.73	63.67	100.00

In 1895 the estimated population of the Colony Proper was 1,142,965: in 1896 it would be 1,166,115. The Birthrate per 1,000 would therefore work out to 33·11 in 1895 and 32·87 in 1896. The expected White population in 1895 was supposed to be 400,038 and 408,140 in 1896, it follows thereupon that the European Birthrate was 35·91 and 34·15 per 1,000 respectively.

35.91 and 34.15 per 1,000 respectively.

Birth rates for European Countries and Australasian Colonies may be quoted from the late Mr. Hayter's Victorian Year Book as follows:—

EUROPEAN COUNTRIES. 1892, per 1,000 of population, Austria 36·2; Italy 36·3; Prussia 36·3; German Empire 35·7; Holland 32·0; England and Wales 30·5; Scotland 30·7; Norway 29·6; United Kingdom 29·5; Belgium 28·9; Switzerland 28·0; Ireland 22·4; France 22·1.

Australasian Colonies. 1865 to 1893, per 1,000 of population: Queensland, 39·22; New South Wales, 38·20; South Australia, 37·37; New Zealand, 37·29; Western Australia (19 years), 34·34; Victoria, 34·25; Tasmania, 32·22. The corresponding figures for 1893 are: Western Australia 33·79; Tasmania, 33·92; Queensland, 33·73; New South Wales, 33·23; South Australia, 31·76; Victoria, 31·23; New Zealand, 27·50.

CITIES AND CHIEF TOWNS, 1895 AND 1896.

Taking with Cape Town the most important uncountry centres of population, the places assume the following order as regards the *total* number of Births which had occurred, and had so far been registered:—

	1895	1896		1895	1896
Cape Town	2349	2393	Uitenhage	317	303
Port Elizabeth	1064	1119	Worcester	244	286
Kimberley	778	746	Graaff-Reinet	280	269
Graham's Town	421	418	Oudtshoorn	266	263
Paarl	359	384	King William's Town	245	253
East London	346	357	Queenstown	216	246

(a) Births which occurred in 1895 are still being registered [Sept. '97].

If attention be paid to European Births by themselves, the results will be seen to be in several cases unsatisfactory. But it should be remembered there is still opportunity for further late Reports of 1896 to come in.

VARIATIONS IN NUMBERS: PROBABLE CAUSES

Despite the enquiries made, no conclusive reasons for the decreases in the number of Births registered in 1896 up to the 15th April, 1897, compared with the number recorded in 1895, and extracted to the same date, can be presented in this Report.

It is very noticeable, however, when the districts are arranged in geographical and climatic order that the

diminutions are conspicuous in neighbouring areas, and are not sporadic.

Starting from the Orange River, and classing Namaqualand as "Karroo" as it essentially is, and coming S. and S.W. we do not observe any noticeable falling off in the aggregate until Stellenbosch is reached. Going eastwards along the Coast (skipping Caledon and Bredasdorp where increases show) the following districts take an unmistakably regular order—Swellendam, Riversdale, Mossel Bay, Uniondale, Humansdorp, Uitenhage, Alexandria, Bathurst, Albany, Komgha, while Victoria East and Stockenstrom (further away from the coast) follow on. Unexpected decreases are apparent in the following divisions lying 4,000 ft. and more above the sealevel, vizt.: Queenstown, Steynsburg, Albert and Barkly East. The intense drought which has lasted for months in the "Karroo" has distinctly retarded registration, farmers with their families, servants and livestock having removed to more favourable localities or being constantly on the move. These districts were badly effected, vizt.: Namaqualand, Carnarvon, Fraserburg, Kenhardt, Prieska and Hope Town, but Ladismith, Jansenville, Middelburg, Graaff-Reinet and Murraysburg (which did not escape the heat and short water supply) bear in their statements the impress of the effect of the seasons. The prevalence of "Rinderpest," and the consequent restrictions on locomotion of natives, account in great measure for the shortfall of Birth reports in Barkly West, Hay and Herbert districts.

With the several districts of the Colony Proper arranged according to climate, the risings or fallings in the number of Births can be readily traced in the subjoined abstract.

The state of the s					GRAND TOTAL	450	878	1993	1506

The special Reports of the Deputy Registrars on this subject may be thus summarised :-

Namaqualand. The distress which has been occasioned through the long continued drought has brought the copie to such an impoverished state that their fecundity has been affected. From the commencement of 1896 ambers of people have emigrated (with or without Government aid); during the twelve months some 600 or 700 have left. The poverty which has prevailed has been the indirect cause of numerous deaths.

STELLENBOSCH, MOSSEL BAY, UNIONDALE, ALEXANDRIA, BATHURST, VICTORIA EAST, QUEENSTOWN, STEYNSBURG, ALBERT, BARKLY EAST and LADISMITH. These Deputy Registrars are unable to satisfactorily explain the reason for the decrease in Births. (See Registrar's note however which applies to all except Stellenbosch, Malmesbury

SWELLENDAM. A considerable number of coloured males have left the district in search of work.

RIVERSDALE. The Deputy Registrar has been to the trouble of obtaining from the Churches particulars egarding baptisms, and it turns out that the decrease in baptisms exactly equals the falling off in Births. He nutries that a considerable number of family-bearing people have left the district.

Humansdorf. The Deputy Registrar is not aware of any exodus, and fears that the poorer classes in remote

localities do not report punctually.

ALBANY. Medical men and monthly nurses have noticed a decided decrease of Births amongst Europeans.

Withdrawal in latter part of 1896 of Cape Police has affected registrations.

Komeha. The natives are continually moving about from place to place in search of work, and while so coming about send their wives and families into the Transkeian Territories where Births occur.

Stockenstrom. The Minister of the Dutch Reformed Church writing, after an experience of 22 years, states but the consideration of the proposition of the propo

hat he does not consider the people lax in reporting Births, and that his baptismal records show considerable

Kenhardt. The decrease is solely attributable to the prolonged drought, which has caused many farmers to trek" to other parts of the Colony. If those that remained have not lost all their cattle, the animals are so poor in

ondition as to render travelling an impossibility.

Carnarvon, Fraserburg, Prieska, Britstown (E). The decrease owing to severe drought. (See Kenhardt Report).

Sutherland. At least 50 white persons (most of them married) have left this district recently and settled in

Graaff-Reinet. The rural decrease due to the temporary withdrawal on special duty of the Cape Police. Colesberg (E). There has been a large exodus from this district to the Transvaal and Rhodesia.

HERBERT. The population is scattered, and natives, owing to the restrictions imposed by Rinderpest regulations, ve not been able to move about freely and report.

HAY. The temporary withdrawal of the police, and the stringent Rinderpest regulations preventing natives om moving about have caused a decrease in Reports.

BARKLY WEST. The A.D.R., who is also Inspector of Native Locations, reports that over 100 families left the locations in the early part of 1896.

Notes by Registrar-1. The withdrawal towards the close of 1896 of large numbers of the Cape Police for Rinderpest duty could not fail to operate in all the districts in which they had been previous employed (and wherein they materially assisted in carrying out the provisions of the Births and Deaths

Act) in the direction of reducing the number of Reports especially in the country.

2. In Bechuanaland unprecedented difficulties have been experienced, and except in Gordonia, where the circumstances of the people are favourable, and the Municipalities of Vryburg and Mafeking, but little in the registration line could be attempted. Even now (Sept., 1897), the Secretary to the Law Department writes—"It would be practically impossible for the police in Bechuanaland to give any attention whatever, even in the very smallest degree, to the registration of Births and Deaths.'

URBAN AND RURAL CASES, 1895 AND 1896.

Not only are Municipalities treated as Urban areas, but localities under the operation of the Villages Management Act and regions specially proclaimed to be Urban.

In the Colony Proper there had been (as far as registered up to the 15th April, 1897), 14,932 Urban Births and 22,907 Rural in 1895, and Urban 15,513 and Rural 22,814 in 1896. For the White and Coloured Races and for the two Sexes the comparative figures are as follows:-

-		Whi	te.			Color	ired.		Total.				
Year.	Year. Urban.		Rural.		Urba	in.	Rur	al.	Urba	an.	Rural.		
	М.	F.	м.	F.	м.	F.	М.	F.	М.	F.	M.	F.	
1895 1896	3588 3445	3382 3398	3833 3605	3561 3489	4045	3917 4279	7710 7926	7803 7794	7633 7836	7299 7677	11543 11531	11364 11283	

and they give the understated percentage proportions :-

100000000000000000000000000000000000000											-		
	1895	9.48			Transfer de la constitución de l	10.69							
	1896	8.99	8.87	9.41	9.10	11.45	11.16	20.68	20:34	20.44	20.03	30.09	29.44

As a similar statement has been abstracted in regard to the Deaths which occurred in and outside the Cities and Towns we are enabled to make an interesting comparison, thus :-

			Births.		ergell er	Deaths.						
Year.	Urk	oan.	Rural.		Both.	Urban.		Rural.		Both.		
Cital Contact Contact and Call	M.	F.	м.	F.	Doub.	м.	F.	M.	F.			
1895	7633	7299	11543	11364	37839	6439	5635	6608	6191	24873		
Percentage	20.17	19.29	30.51	30.03	100.00	25.89	22:65	26.57	24:89	100.00		
1896	7836	7677	11531	11283	38327	7196	5914	6621	6215	25946		
Percentage	20:44	20.03	30.09	29.44	100.00	27.73	22.81	25.52	23.94	100.00		

It thus appears that in Urban Areas, the Births of Male White children have decreased 143, while the Deaths have increased 154 in the interval, and the Female White Births are 16 over and Deaths 49 under the numbers for 1895, again the Coloured Births are 708 and Deaths 931 in excess of the corresponding figures for the previous year.

ILLEGITIMATE BIRTHS.

The total number of births of European or White infants was 14,616, comprising 7,412 males and 7,204 females of these 310 were illegitimate, 149 being male and 161 of the female sex. It follows, therefore, that the percentage of illegitimate to total births was 2.12; to male 2.01 and to female 2.24. By way of comparison, the following figures taken from the Victorian Year Book for 1894 are given.

Various Countries. Illegitimate births to every 100 children born: Austria, 14.7; Sweden, 10.2; Denmark, 9.6; German Empire, 9.3; Belgium, 8.7; Scotland, 8.2; Norway, 8.1; France, 8.1; Prussia, 8.1; Italy, 6.8; England, 4.7; Switzerland, 4.6; Ireland, 2.8; New South Wales, 4.6; Victoria, 4.6; West Australia, 4.2; Queensland, 4.2; Tasmania, 4.0; New Zealand, 2.8; South Australia, 2.6.

Before discussing the subject of percentages obtained from the figures published on later pages, it is worth while to advert to the difficult question of marriage by Native Custom. The Chief Justice, in deciding on the appeal case of Ngqobela vs. Sihele, heard in the Supreme Court, December, 1893, delivered an elaborate judgment, from which the following items of information are taken. Act No. 16 of 1860 provides for the appointment of Marriage Officers for solemnising the marriages of persons professing the Mohammedan faith according to the Mohammedan Officers for solemnising the marriages of persons professing the Mohammedan faith according to the Mohammedan customs and usages, but not for marriages according to Native customs, and a union therefore founded only upon native usage and custom within the Colony proper is not a marriage, and Courts of Law are bound to treat the intercourse as illicit. Any marriage which would be regarded as valid in any of the dependencies of the Colony must be regarded as valid in the Colony, although Colonial solemnities have not been observed (and this is important) if it is not opposed to the essential nature of the contract as understood in the Colony. The Court held the effect of Proclamation No. 14 of 1885 is to dispense with the solemnities required by the laws of the Colony proper in the case of natives electing to marry in Tembuland (it was a case originating there that was before the Court) according to their own customs. If they register the marriage it has the same effect as marriage contracted under Colonio to their own customs. If they register the marriage it has the same effect as marriage contracted under Colonial law; if they do not register it remains valid, but its effect must be judged by the native custom of the territory. The Supreme Court can only administer the law of the Colony, but for that purpose it may become necessary to give effect to the laws of other countries and dependencies so far as they affect the validity of any contract entered into by

From the foregoing considerations it will be evident that from the information obtainable from the general run of natives, it is impossible to state for certain how many births are legitimate or natural. In the Registration Books specially framed for use in Native Locations no enquiry was made as to date or place of marriage, and under the numerical system the sole question asked is whether the infant is a boy or girl. The returns of Fingo and Kafir births have been tabulated under three headings, Legitimate Cases, Native Custom, Illegitimate, but such an arrangement can only be viewed as a temporary expedient. When the difficulties of deciding the validity of certain native marriages in the Transkeian Territories are so great as to necessitate appeals to the Supreme Court to settle the moot points, this Department must reasonably be excused from tabulating decisively births the result of Native marriages as to which there is no evidence to prove the domicile of the parties at the time

It would be futile to investigate any proportion where such uncertainty exists.

Births of children belonging to the Mixed, Other and Hottentot Races with Malays amounted in 1896 in the Colony Proper only to 12,840 in all, 6,552 being boys and 6,288 girls: of these events 3,938 were illegitimate, consisting of 2,004 males and 1,934 females, giving the following percentage proportions, viz.:—

Illegitimate	births	to	total	Mixed and	Other	births	(Colony	Proper	only)	 30.67
Male illeg.	do	do	do	M. births						 30.59
Female illeg	. do	do	do	F. births						 30.76

In Trinidad the percentage of illegitimacy for Coolie births was 80.30 (Registrar-General's Report for 1891).

GENERAL COMPARATIVE SUMMARY .- COLONY PROPER, 1895 AND 1896-WITH PROPORTIONS.

Adding to the deaths registered in 1895, the events of that year subsequently recorded up to the 15th April, 1897, a grand total of 31,579 cases is arrived at. Similar figures for 1896 are stated to be 32,834, but it has to be remembered that for Bechuanaland returns were rendered in respect to 1895 for only 6 weeks, the annexation of that Territory to the Colony having taken place on the 15th November, 1895. The figures for Walfish Bay are insignificant—10 and 9 deaths for the two years—while those for the Transkeian Territories, £,622 and 6,159 for 1895 and 1896, are unavoidably imperfect, consequently it is advisable to compare simply the Colony Proper occurrences. This may be done as follows:—

Sex and Year.	White.	Malay.	Hottentot.	Fingo, Kafir and Betchuana.	Mixed and Other.	Total other than White.	Total.
M. 1895	3537	296	1172	4626	3445	9539	13076
M. 1896	3759	192	1428	4962 .	3525	10107	13866
F. 1895	2982	270	1185	4018	3374	8847	11829
F. 1896	2990	229	1377	4228	3310	9144	12134

From the above data, the following percentages are derived, namely:-

						,	
M. 1895	27.05	2.26	8.96	35 · 38	26:35	72.95	100.00
M . 1896	27:11	1.38	10.30	35.79	25.42	72.89	100.00
F. 1895	25 · 21	2.28	10.02	33.97	28.52	74.79	100.00
F. 1896	24 · 64	1.89	11.35	34 · 84	27 · 28	75:36	100.00

G. 1—'98.7

The estimated population of the Colony Proper was 1,142,965 in 1895, and 1,166,115 in 1896. On these and the above data the death rates are 21.79 and 22.30 per 1,000, respectively. Again, the assumed white population in 1895 was 400,038 and 408,140 in 1896, giving a European death rate of 16.29 and 16.54 per 1,000.

The European death rates for the undermentioned countries have been taken from the Victorian Year Book for 1894.

EUROPEAN COUNTRIES. 1892, per 1,000 of population, Austria 28.8; Italy 26.2; German Empire 24.1; Prussia 23.4; France 22.6; Holland 21.0; Belgium 21.8; Ireland 19.4; Switzerland 19.3; England and Wales 19.0; United Kingdom 19.0; Scotland 18.5; Norway 17.7.

Australasian Colonies. 1865 to 1893, per 1,000 of population, Queensland 17·16; W. Australia (19 years) 16·06; Victoria 15·57; Tasmania 15·23; N. S. Wales 15·17; S. Australia 14·32; New Zealand 11·48. For 1893 alone the corresponding figures are:—W. Australia 15·12; Victoria 14·11; Tasmania 13·47; S. Australia 13·44; Queensland 13·34; N. S. Wales 13·25; New Zealand 10·23.

CHIEF TOWNS, 1895 AND 1896.

After the non-resident hospital cases have been deducted from the total number of Deaths that happened in eight of the most important centres of population, it is found that the following comparative results show themselves,

I	DEATHS.		DEATI	IS.	
Town.	1895	1896	Town.	1895	1896
Cape Town	2120	1672	Paarl	284	285
Port Elizabeth	785	1183	Uitenhage	245	268
Kimberley	903	870	Queenstown	188	198
Graham's Town	386	455	Worcester	274	192
Graaff-Reinet	242	346	East London	185	174
Oudtshoorn	183	298	King William's Town	148	158

At Port Elizabeth and Graaff-Reinet the Coloured Races suffered far more in 1896 than the European: at Graham's Town the increase is nearly equally distributed as regards Race, but is confined to the Male Sex.

(In the footnote on page 3 Deaths the figures "1895 and 1896" have been reversed.

VARIATIONS IN NUMBERS: PROBABLE CAUSES.

Considerable variations in the numbers of deaths registered in each year in the different districts are noticeable,

District.	1895	1896	Probable Explanation.
Aberdeen	117 530 224 279 123 236 405 527 1844 204 510 480	195 370 327 181 219 350 527 393 2010 112 779 335	Greater amount of sickness and better system of reporting. Inspector of Locations reports large exodus (100 families) early in 1896. Greater amount of sickness. Cessation of Whooping Cough epidemic. Greater amount of sickness. Unwillingness of Natives to report. Energetic measures of D. R. to induce Natives to report. Cessation of Whooping Cough epidemic. Greater prevalence of sickness. Cessation of Whooping Cough epidemic.
Port Elizabeth Prince Albert Piquetberg Victoria East	872 148 204 267	1257 246 322 414	Greater prevalence of sickness amongst the Coloured people. More sickness and better system of reporting. Greater amount of sickness amongst Natives and better system of reporting.
Willowmore	169	262	More sickness.

Owing to the subsidence in 1896 of the epidemics of Whooping Cough, Measles and Influenza, the number of fatal cases of illness fell off in Cape, Paarl and Stellenbosch Divisions. In the adjoining districts of Worcester, Robertson and Caledon, Whooping Cough had retained its hold but Measles was not so prevalent. In all these areas deaths were fewer in number than in 1895.

Several Magistrates in East Griqualand allude to the influenza epidemics of 1895, and the comparative healthiness of the succeeding year.

The Magistrates of *Tembuland* and *Transkei*, when asked, assign a similar reason for the decrease in the number of deaths. The native people as a rule are not more unwilling to report than they have been, but naturally there is ample scope for improvement in this respect.

URBAN AND RURAL CASES, 1895 AND 1896.

For the purposes of the Act No. 7 of 1894, areas under Municipal and Village Board control, as well as certain specially so proclaimed, are termed and treated as "Urban." Confining attention to the Colony Proper alone, it will be seen that there were 12,074 Urban Deaths and 12,799 Rural in 1895, and 13,110 Urban and 12,836 Rural in 1896, and that the component items for the two Races and Sexes give the following results:-

		Wh	nite.	-		Colo	ured.			То	tal.	
Year.	Url	oan.	Ru	ral.	Url	oan.	Ru	ral.	Url	oan.	Ru	ral.
	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.
1895	2100	1759	1414	1220	4339	3876	5194	4971	6439	5635	6608	6191
1896	2254	1710	1465	1275	4942	4204	5156	4940	7196	5914	6621	6215

8 * 44 | 7 * 07 | 5 * 69 | 4 * 90 | 17 * 45 | 15 * 58 | 20 * 88 | 19 * 99 | 25 * 89 | 22 * 65 | 26 * 57 | 24 * 89 8.68 6.60 5.65 4.91 19.05 16.21 19.87 19.03 27.73 22.81 25.52 23.94

Napier became an Urban Area for the first time in April, 1896, and Hackney and some few adjoining hamlets in July: otherwise nothing transpired in the constitution of such localities to disturb the similarity of the departmental arrangements in the two years. The cause of the increase must be sought elsewhere.

AGES.-NUMBERS AND PERCENTAGES, 1895 AND 1896.

Of the 6,749 persons (European) who died in the Colony Proper in 1896 all but 9 are specified for age, while for the 19,251 Coloured people full particulars could not be obtained regarding 193.

European children under 5 years of age to the number of 3,316 died in 1896 compared with 3,083 in 1895, and

Coloured children to the number of 10,594 and 10,257 respectively. While there is but a small difference between the number of Europeans over 5 years that passed away in the two years (3,424 and 3,421), the Coloured Deaths had increased from 7,732 to 8,464: this increment would probably not be so conspicuous if the exact ages of 397 persons who died in 1895 could be located.

AGES OF DECEASED NATIVES.

The difficulties that were experienced (and in the main overcome) in connection with the arrangements made for taking the Census of 1891 in relation to Ages have beset with less chance of remedy Deputy Registrars in the Native Districts. The Assistant (Mr. C. A. King) at Keiskama Hoek, had been queried on this subject, and in reply made the following pertinent remarks—"The headmen state that they are unable to give even an approximate age, as many of the people that die are unknown to them. When it is considered that one headman may have several thousand people under him scattered over a large extent of country, it will be understood that it is impossible to give even approximate ages. . . . No native knows his age, and even with persons who have spent a lifetime amongst these people it is a tedious process, and an extremely difficult matter, to arrive at any approximate age. amongst these people it is a tedious process, and an extremely difficult matter, to arrive at any approximate age. For instance a native of 30 or 40 years of age, if uncircumcised, would be called, and spoken of, as a boy, whilst a youth of 16 or 17 years, if circumcised, would be spoken of and recognised as a 'man.' Again, a native if aged in appearance or decrepid from physical infirmity, will be spoken of as an 'old man' or 'very old man,' he will be similarly called if his children have arrived at man or woman-hood."

For reasons like the above it has been deemed safest not to publish the detailed figures that have been collected regarding the ages of the deceased natives whose deaths have been reported under the more primitive native system.

CERTIFICATION, 1895 AND 1896.

Of the Deaths which occurred in 1896, 10,248 were cartificated compared with 10,076 in the previous year, and 22,586 uncertified contrasted with 21,503 in 1895.

By far the largest number of reports from the native districts are unsupported by medical evidence. Hence it will be sufficient to draw attention to the Colony Proper figures, which may be summarised as follows:—

				Certifie	d Cases						τ	Incertif	ied Case	es.

CAUSES OF DEATHS.—CERTIFIED CASES ONLY: COLONY PROPER, 1895 AND 1896.

To sum up in as short a space as possible the main features of the table of the causes of death, the subjoined statement has been compiled:—

Summary—arranged by Sub-Classes and Classes of Disease—of the number of Males and of Females, distinguishing European or White from Coloured Persons, whose deaths, happening in 1895 and 1896, had been registered up to the 15th April, 1897, with percentage proportion of European and of Coloured deaths of each Sub-Class and each Class to the total number of European and Coloured deaths, and the percentage proportion of the total deaths of each Sub-Class and Class to the total deaths registered.

^{*} Apparent increase of fatal cases due in 1896 partly to re-arrangement of classification of certain items.

COMMONEST CAUSES OF DEATH.—WHOLE COLONY, 1895 AND 1896.

This return which differs from any of the others in that it relates to the Whole Colony (including the Transkeian Territories and Bechuanaland) and includes Uncertified cases, is arranged according to the order of the events that transpired in 1895, the sequence for 1896 being indicated by the entry in the "No." column. It may be explained that several items occupy positions dissimilar to those previously held partly owing to the better information now afforded and partly on account of changes in classification. In this connection the following diseases are mentioned, vizt.: "Enteritis," "Typhoid Fever," "Tabes Mesenterica," "Other diseases of Larynx and Trachea," "Tumour."

DEATHS OF CHILDREN (CERTIFIED CASES) COLONY PROPER, 1895 AND 1896.

In view of the importance of the subject, a special statement of the Certified Causes of the Deaths of European and Coloured Children (under 5 years of age) which occurred in the Colony Proper in 1895 and 1896 has been extracted, and is hereunder exhibited with the respective percentage proportions. The diseases appear in the order of greatest frequency obtaining in 1895, and it may be observed that the changes in classification previously referred to are responsible for several alterations in relative positions.

SPECIAL DISEASES (CERTIFIED)-CLIMATIC ARRANGEMENT.

The subjoined return is arranged according to the order of the frequency of occurrences in 1895. It shows that as far as the evidence of Certified Cases goes, Pneumonia, Bronchitis and Phthisis were fully and evenly distributed over the Colony Proper. Other forms of Phthisis were also equally dispersed. Diarrhoea was returned in more districts in 1896 than in 1895. Influenza had abated, and at the fastest rate outside the West Coast area. Enteritis was following the converse procedure. Cancer and Diphtheria unfortunately as regards distribution were steady. Typhoid Fever had appeared in 15 more districts in 1896. Whooping Cough had gained a good hold of the Karroo area in 1896 and Measles had made way in all but the Western region. Smallpox as a certified disease had practically disappeared except in the Karroo. Cerebro-Spinal-Meningitis (not returned at all in 1895) showed itself in 11 areas in 1896. itself in 11 areas in 1896.

Comparative statement showing for 1895 and 1896 the number of districts in which Certified Cases of the specified diseases had occurred—the districts being grouped according to climate:—

	Cause	s of De	ath.		Tot (73 Dis	tal. stricts).		Coast stricts).	South a (24 Dis	nd S.E. stricts).	(10 Dis	rder stricts)		rroo stricts).

PUBLICATION OF RESULTS, 1896.

Although this Report appears late in the year, the publication of the derived results as regards Ages and Causes of Death was commenced in the Newspaper Press in February, 1897, the Cape Division figures having been completed on the 17th February, those for Port Elizabeth on the 18th, and those for Kimberley on the 19th, 16 other sets followed in quick succession, while the last returns of the special batch, vizt., for Uitenhage and Worcester were finished on the 17th March.

On the 14th June statements showing—by Races and Sexes—Urban and Rural Deaths for each District of the Colony Proper, and classified causes of Death, as well as the detailed ages of the deceased were gazetted. Government Notice, No. 512/97. Two months later the Births in each District were presented by Races and Sexes for Urban and Rural Areas. Government Notice, No. 757/97.

PUBLICATIONS, 1897.

Abstracts showing the number of male and female European and Coloured Births and Deaths are published monthly in the Gazette in respect to the following Cities and Towns, vizt., Cape Town, the Suburban Municipalities of Sea and Green Point, Woodstock, Maitland (V.M.B.), Mowbray, Rondebosch, Claremont, Wynberg, Kalk Bay and Simon's Town; as well as Aliwal North, Beaufort West, Cradock, East London, Graaff-Reinet, Graham's Town, Kimberley and Beaconsfield, King William's Town, Malmesbury, Oudtshoorn, Port Erizabeth, Queen's Town, Somerset East, Stellenbosch, Uitenhage, Worcester. The mortality returns show all the principal diseases in detail, and whether the deceased was under or over five years of age.

PROGRESS OF REGISTRATION, 1897.

Up to the 15th September, 1897, 27,522 Births and 18,132 Deaths had been "registered" in the Colony Proper, compared with 26,143 Births and 17,798 Deaths up to 15th Sept., 1896.

A. C. DALE,
Registrar of Births and Deaths.

Registration Office,
Cape of Good Hope,
September, 1897.

BIRTHS, 1895 AND 1896.

[As abstracted to 15th April, 1897.]

- 1. SUMMARY, EACH TERRITORY—FIVE MAIN RACES.
- 2. CITIES AND CHIEF TOWNS—FIVE MAIN RACES.
- 3. LEGITIMATE, NATIVE CUSTOM AND ILLEGITIMATE CASES—SUMMARY.
- 4. EACH DISTRICT—THREE RACES (WHITE, YELLOW-BROWN AND BLACK).
- 5. EACH DISTRICT—URBAN AND RURAL CASES—WHITE AND COLOURED.

Last Return completed 21st September, 1897.
