PREFACE.

Concurrently with the enumeration of the European population in May, 1941, an enquiry was conducted into the size and incomes of families. This was the first occasion on which information in respect of income was collected.

The chief object of the enquiry was to obtain data regarding the structure and income of families and not of households. It was found that owing to war conditions and the absence of husbands on military or other war work, many households contained more than one family. The shortage of houses even in this early stage of the war plus changes in economic conditions no doubt contributes largely to this phenomena. Unfortunately the form of questionnaire did not ask for the number of families in the household. The family membership in the report which follows is therefore virtually limited to persons having husband-wife or parent-child relationship, and not with the group of persons comprising the household.

The form of questionnaire limited the enquiry in regard to income. For the purposes of the census "income" signified the total income of the family from all sources for the twelve months prior to the 1st May, 1941. The income declared was not the actual amount but the grade income, that is, whether it was "under £50", "between £50 and £100", etc., in nine grades up to "£400 and over" for income derived mainly from non-farming sources. For incomes derived mainly from farming operations there were only five grades, the limit being "£200 and over". The results of the tabulation show that these limitations of range seriously affect the value of the income distributions, and in future enquiries of this nature, the range should be considerably extended in order to enhance the value of the statistical results.

The survey covers 1,915,512 persons or 88 per cent. of the total European population of 2,160,174 enumerated—a sufficiently large sample to be indicative of the whole.

E. PEEL PEARCE,
Director of Census and Statistics.

April, 1945.

VOORWOORD.

In Onderzoek na die grootte en inkome van gesinne is gelyktydig met die opname van die blanke bevolking vir Mei 1941, ingestel. Dit was die eerste geleentheid dat inligting in verband met inkome versamel is.

Die hoofdoel van die onderzoek was om gegewens betreffende die struktuur en inkome van gesinne en nie van huisgesinne nie, in te wen. As gevolg van oorlogstoestande en die afwesigheid van mans op militêre of ander oorlogsdien, is daar gevind dat baie huisgesinne meer as een gesin bevat. Die tekort aan huise, selfs op hierdie vroeë stadium van die oorlog, tesame met veranderings in ekonomiese toestande het ongetwyfelbaar baie bygedra tot hierdie verskynsels. Ongelukkig het die vraelys nie om die getal gesinne in die huisgesin gevra nie. Die gesinslede wat volg in die verslag is dus feitlik beperk tot persone wat in 'n verhouding van egenoot-eggenote en ouer-kind lewe, en sluit nie die groep persone wat die huisgesin vorm, in nie.

Die vraelys het die navrae betreffende inkome beperk. Vir die doel van die sensus het „inkomste“ die totale inkome van die gesin uit alle bronne vir die twaalf maande voor 1 Mei 1941, betrek. Die inkome wat aangegee is, was nie die werklike bedrag nie maar die graadinkome, dit wil sê, of dit „onder £50“, „tussen £50 en £100“, ens., was, in nege grade tot „£400 en meer“ vir inkome wat hoofsaaklik uit bronne anders as boerdery verkry is. Daar was slegs vyf grade waarvoor die grens „£200 en meer“ was vir inkome wat hoofsaaklik uit boerdery verkry is. Die resultate van die tabelle toon dat hierdie beperkings van omvang die waarde van die inkomedistribusies ernstig raak, en in gevoldlike ondersoek van hierdie aard sal die omvang aansienlik uitgebrei word ten einde die waarde van die statistiese resultate te verhoog.

Die opname dek 1,915,512 persone of 88 persent van die totale blanke bevolking van 2,160,174 wat opgeneem is—n 'n monster wat groot genoeg is om as 'n aanduiding van die geheel te dien.

E. PEEL PEARCE,
Direkteur van Sensus en Statistiek.

April 1945.

CENSUS OF THE EUROPEAN POPULATION, MAY, 1941.

REPORT ON EUROPEAN FAMILIES AND INCOME.

1. General.—Information in regard to the constitution of European families and their income was collected, for the first time, in conjunction with the general census conducted on the 6th May, 1941. A copy of the form used in this connection is attached. (Annexure A). The table used for the purpose of ascertaining the structure of households and families is reproduced below for convenient reference. The householder was required to:—

"fill in the usual number of persons (excluding servants), in this household, that is, who usually live in this dwelling, whether present or not on census night".

This implies, in particular, that persons who were temporarily separated from their families on account of business or holidays, schooling, military service, etc., had to be enumerated on the form.

	NUMBER.		
	Males.	Females.	Persons.
1. FAMILY— Head and/or wife.....			
Children under 16 years of age.....			
Children 16 years and over.....			
TOTAL IN FAMILY.....			
2. OTHERS— (a) Other relatives and guests of family residing permanently in dwelling (all ages).....			
(b) Other regular lodgers (all ages).....			
TOTAL IN HOUSEHOLD (Family and others).....			

2. Definitions.—The term *household* was not explicitly defined but the meaning intended in the form and attached thereto in this report is essentially the same as that conveyed by the following definition used in the Canadian Census of 1941. A *household* is defined as—

"a person or group of persons living in one housekeeping community. The persons may or may not be related by ties of kinship, but if they only live together with common housekeeping arrangements, they constitute a household"; two or more households may occupy the same dwelling. If they occupy separate portions of the same dwelling and their housekeeping is entirely separate, they shall be treated as separate households".

For the purpose of the Census enquiry a FAMILY means—

- (i) husband and wife without children;
- (ii) the father, mother and children, including step-children or adopted children;
- (iii) a living parent and his, or her, children;
- (iv) where both parents are dead, the brothers and sisters living as a family;
- (v) the grandparent(s) with orphaned grandchildren.

Family membership is thus virtually restricted to persons having the husband-wife or parent-child relationship, and is thus not consistent with the group of persons comprising the household. The latter often consists of two or more families and very frequently includes persons related to the head or wife, such as uncle, niece, mother, etc., but are not members of his immediate family.

It should be noted that the definition of family makes no mention of the financial status of children. The married child necessarily forms part of his own family distinct from that of his or her parents even though living with and financially dependent on them. The financially independent child may, however, be listed as a member of the family when he or she lives with the parents; or as a single non-family individual when not living with the parents. In view of the fact they are financially dependent, scholars and students who usually live away from home, are supposed to have been entered as members of the family.

It is important to note that: (i) a household may consist of a single person, and (ii) several families may be included in the same household.

Two classes of single non-family persons may be distinguished. Firstly, the single individual who constitutes a household as defined. Generally such an individual is a widow without resident children, who may or may not have boarders, lodgers or relatives staying in the same dwelling. In the former case we have the *single-person-household*, and in the latter the multiple household which centres around the single non-family individual as head. Secondly, we have the *singly-living individual* who is detached from his family and, presumably, financially independent of it. This person generally lives in a hotel or in a private boarding-house and, when in this position, cannot be said to be a member of either family or household.

In the case of multiple family households the chief family, generally the one responsible for paying the rent or which owns the dwelling, completed section 1 of the form and the subsidiary families were entered in section 2 as relatives, lodgers, etc. Each such subsidiary family was also required to complete a form in regard to its own constitution and income but in such secondary returns the particulars relating to the constitution necessarily appeared in section 1.

The form of return did not ask for the number of families in the household—a very regrettable omission.

3. Families and Household.—The chief object of the enquiry was to obtain data regarding the structure and income of families and not of households. From the observations of the preceding section it is clear that the information relating to the total number of families is exact (though not complete) despite the fact that certain families lodged with other families. It is, however, not possible to distinguish between lodging families and other families and hence the exact number of households cannot be determined. It is possible, though, to separate the persons enumerated in section 2 of the form into two groups as follows:—(i) The family individuals, and (ii) the non-family individuals. The number of lodging families may therefore be estimated on the assumption that the average membership is the same as for all families in general. There is reason to believe that the membership of the lodging family is smaller, on the average, than that of the independent family and the estimate is therefore probably too small. Errors of estimate cannot, however, be of much importance since, judging by the total number of persons, the proportion of lodging families must be relatively small.

4. Proportion of Population Enumerated.—In view of the fact that this was the first occasion on which a family survey of the whole European population was conducted it is of interest to determine what proportion of the total population enumerated at the general census was covered by the family survey. The following are the ratios concerned; their derivation is shown in Table 1 of the Annexures:—

RATIO PER CENT OF TOTAL POPULATION INCLUDED IN FAMILY SURVEY.

Province.	Urban.	Rural.	All Areas.
Cape.....	85·9	98·6	90·1
Natal.....	83·4	93·2	85·2
Transvaal.....	87·4	87·7	87·5
Orange Free State.....	77·7	96·6	87·4
UNION.....	85·8	93·7	88·2

The whole European population enumerated at the Census in May, 1941, was 2,160,174 of whom 1,499,655 were in urban areas and 66,519 in rural areas. These figures exclude 32,009 persons who were on military service outside the Union and could not be allocated to urban or rural areas. The family survey covered 1,286,361 in urban areas and 619,151 in rural areas. The ratio for the whole Union was 88 per cent., that is, approximately eight-ninths of the population was enumerated in the family survey.

There is a very significant difference between the ratios for urban and rural areas. In each province, except the Transvaal, the rural ratio is considerably higher. At least two causes account for this difference:—

- (i) By May, 1941, a very large number of persons who were usually resident in rural areas had moved to urban areas on active service and had left their families behind. Such persons were enumerated in urban areas as far as the general census is concerned but in the family survey they were recorded as living in rural areas.
- (ii) Many children who normally attend school in urban areas and were recorded there in the general census have their permanent residence in rural areas and were, presumably, recorded there in the family survey.

It is fairly safe to say that the above proportions overstate the degree of enumeration in rural areas and underestimate them in urban areas. The fact that the ratios for the Transvaal are almost equal instead of showing a difference is, no doubt, due to the existence of very large military camps in the rural area of Pretoria.

The ratios for the large cities and towns are of interest. In both Cape Town and Johannesburg rather more than 90 per cent. of the total population was enumerated but in Pretoria, Pietermaritzburg and Bloemfontein the ratios were well below the general average. This situation was probably the result of the large shift in population due to the war. Many thousands of persons who were enumerated in the general census in Pretoria, in particular, must have been entered on family forms in other places, namely those of usual residence.

5. Households.—The provincial distribution of households was as follows:—

Province.	Urban.	Rural.	All Areas.
Cape.....	121,051	63,286	184,337
Natal.....	41,681	10,552	52,233
Transvaal.....	154,638	55,431	210,069
Orange Free State.....	19,010	24,784	43,794
UNION.....	336,380	154,053	490,433

As pointed out in paragraph 3, the above figures are not exact but based partly on an estimate of the number of families who lodge or board with other families. The proportion of such families is small and the nature of the assumption underlying the estimate shows that the numbers of households must be smaller than those shown above, but almost certainly by not more than 1 per cent. The figures bear witness, incidentally, to the high degree of urbanization in Natal and the low degree in the Orange Free State.

The detailed figures of Table 1 show that there were 29,312 households in urban areas at the head of which there was some single non-family persons—generally a widow without children who either lived by herself or with boarders or lodgers. The ratio for this type of household was thus 8·7 per cent.; the corresponding ratio for rural areas was 8·6 per cent. There are far more households in which there is only one single person than households in which such single non-family individual is associated with relatives and lodgers. It is reasonable to suppose that the opportunity for taking in lodgers is far greater in urban than in rural areas; the figures of Table 1 suggest strongly that advantage is taken of this fact.

The proportion of single-person households is significantly higher in the large cities of Johannesburg (10·5 per cent.), Cape Town (9·6 per cent.) and Durban (9·3 per cent.) than in the smaller cities and towns. In Bloemfontein this type of household is exceptionally uncommon (3·1 per cent.).

6. Families.—The provincial distribution of families was as follows:—

Province.	Urban.	Rural.	All Areas.
Cape.....	114,190	59,237	173,427
Natal.....	39,203	9,624	48,827
Transvaal.....	153,087	53,975	207,662
Orange Free State.....	18,513	24,696	43,209
UNION.....	324,993	147,532	472,525

The total number of families enumerated was 472,525 and of these 68·8 per cent. or approximately two-thirds were in urban areas. These families may be divided into three classes as follows:—

- (i) Independent families—without relatives or lodgers;
- (ii) Families having relatives or lodgers with them;
- (iii) Lodging families, that is, who lodge with other families, (but not in hotels or boarding-houses).

Particulars in regard to these three classes are shown in Table 1. The proportional distributions for urban and rural areas respectively are as follows:—

Area.	PERCENTAGE IN CLASS.			
	(i).	(ii).	(iii).	Total.
Urban.....	69·1	25·4	5·5	100·0
Rural.....	77·1	18·3	4·6	100·0
ALL AREAS.....	71·6	23·2	5·2	100·0

Of the urban families 69 per cent. live independently of other families, 25 per cent. have boarders, lodgers or relatives, and 5·5 per cent. live with other families. The differences between urban and rural are precisely what one would expect having regard to the smaller opportunity for taking-in lodgers in rural areas.

Durban appears to have the largest proportion of families living independently (73 per cent.), and Johannesburg the largest ratio of lodging families (6·7 per cent.).

Comparison with the figures of the preceding section shows that there are more households than families; this is not only true of each province but also of urban and rural areas respectively. The numerical relationship between households and families in any given area depends on the extent to which families lodge with other families and the proportion of households which consist of only a single non-family person. It is of interest to note, in this connection, that households exceeded families in every province of Canada in 1941 and that the excess in the country as a whole was 6·2 per cent.; the corresponding figure for the Union was 3·8 per cent.

7. Structure of Family.—Particulars regarding the structure of families are contained in Table 2. If the relatively small number of families in which there are only children be excluded, then the proportional division is as follows:—

Area.	PROPORTION (PERCENTAGE) OF FAMILIES.			
	Head and Wife only.	Head, Wife and Children.	Single Head (M. or F.) and Children.	Total.
Urban.....	26·1	64·8	9·1	100·0
Rural—Farming.....	19·8	74·8	5·4	100·0
Non-farming.....	25·7	69·5	4·8	100·0

About one-quarter (26 per cent.) of the urban families are childless; the corresponding proportion for farming families in rural areas is significantly smaller, namely, 19·8 per cent. Non-farming rural families agree more closely as regards type with the urban than do the farming. The information available does not permit the classification of the childless families into various types—whether for example, they are young or old couples who have never had any children, or whether the children have been lost through death or marriage, etc. The proportion of families with only a single person at head is significantly larger in urban than in rural areas. It is interesting to note, also, that far more of these families have a female as head than a male.

8. Children in Families.—Table 3 contains particulars regarding the persons included in all families. The following figures show the average children per family and the proportions of children aged under 16 years.

PROVINCE.	CHILDREN PER FAMILY.		PROPORTION CHILDREN AGED UNDER 16 YEARS.	
	Urban.	Rural.	Urban.	Rural.
			Farming.	Non-Farming.
Cape.....	1·77	2·29	1·99	70·1
Natal.....	1·42	1·63	1·48	70·3
Transvaal.....	1·68	2·13	1·94	74·6
Orange Free State.....	1·76	1·83	1·96	75·7
UNION.....	1·68			

The average number of children per family is smallest in urban areas (1·68) and largest amongst farming families in rural areas (2·11). The averages for Natal are lower than those for the other provinces; this is in accordance with the known fact that the European birth-rate is lower in Natal than elsewhere. It should be noted that the above averages are based on all families inclusive of these in which there are no children.

The second part of the above table shows that nearly three-quarters of the children are under 16 years of age. The proportions of young children are significantly larger amongst non-farming rural families than others. This applies to all provinces. These families belong to many industrial groups but more particularly trading, mining and alluvial digging, road and rail construction and maintenance, forestry and fishing. They also include a considerable proportion of peri-urban families who obtain their income from activities in the large cities and towns.

9. Persons per Family.—Table 5 shows the distribution of families according to the number of persons, including head, wife and children. Families consisting of only two persons account for 28·6 per cent., or rather more than a quarter, of the total. In by far the majority of cases these persons are husband and wife; but Table 2 shows that there are 37,250 families at the head of which there is only one person—either male or female—and of these there are 18,424 which consist of only two persons, namely, one child together with father or mother or grandparent. We may now assume that the 37,250 less 18,424, or 18,826 families with one head and two or more children are distributed on a pro rata basis amongst the 337,642 families of three or more persons. On this assumption we get the following distribution according to number of children.

Children per Family.	Number of Families.	Children per Family.	Number of Families.
0.....	116,459	6.....	9,678
1.....	129,862	7.....	4,819
2.....	99,662	8.....	2,453
3.....	58,721	9+.....	1,864
4.....	32,040		
5.....	16,967	TOTAL.....	472,525

From the above distribution it may be calculated that the total number of children was approximately 849,300 as against the 850,126 actually enumerated (Table 3). The figures above may, therefore, be accepted as accurate enough for all practical purposes.

Table 5 shows also that families of four or fewer persons constitute three-quarters (77 per cent.) of the urban and two-thirds (68 per cent.) of the rural total. Large families are proportionately more numerous in rural than in urban areas. We find, for example, that in 2·95 per cent. of the urban families there are eight or more persons, but in rural areas the corresponding ratio is no less than 5·62 per cent. This fact is also clear from the following averages:

AVERAGE PERSONS PER FAMILY.

PROVINCE.	Urban.	RURAL.			All Areas.
		Farming.	Non-Farming.	Total.	
Cape.....	3·658	4·23	3·93	4·147	3·825
Natal.....	3·326	3·56	3·44	3·504	3·361
Transvaal.....	3·594	4·07	3·90	4·008	3·702
Orange Free State.....	3·667	3·77	3·92	3·799	3·741
UNION.....	3·588	4·054	3·866	3·966	3·715

The average number of persons per family is thus 3·588 in urban areas and 3·996 in rural areas; farming families appear to be larger on the average than non-farming families—except in the Orange Free State.

10. Family Income : General.—The income which was required to be stated in the enquiry was that of all members of the family combined during the twelve months, 1st May, 1940, to the 30th April, 1941. Income from all sources had to be included, namely from wages or salary, interest, dividends, pensions and grants as well as the estimated money value of income in kind such as free quarters, rations, etc. Business and professional men were required to state the nett income remaining after deducting the usual expenses incurred in the earning of the income.

The income declared was not the actual amount but the grade income; that is, whether it was "under £50", between £50 and £100, etc. For income derived mainly from non-farming sources there were nine grades, the highest being "£400 and over"; and for income derived mainly from farming operations there were only five grades, the highest being "£200 and over". These severe limitations of the range seriously affect the value of the income distributions. The calculation of arithmetic averages is, of course impossible and the median or some other type of average must be used. In very many cases, however, even the median cannot be calculated owing to the fact that more than one-half of the families in a particular distribution have income exceeding £400.

11. Income, Urban Areas.—Table 12 shows that of the 324,993 families enumerated in urban areas 6,895 or 2·12 per cent. derived their income from farming operations. Some of these, no doubt, conducted market gardening, or dairy or poultry farming, etc., within the municipal boundaries while others were absentee landlords. In addition there were also 1,572 families who obtained the bulk of their income from non-farming operations but a part also from farming. In view of the small ratio of urban families whose main source of income was farming no distinction will, in this survey, be drawn according to source; that is, all urban families are considered as obtaining their income from non-farming activities.

Table 6 summarizes the information in regard to the provinces. The following figures are based on that table:

PROPORTIONS OF FAMILIES, PER CENT.

Average Income.	Cape.	Natal.	Transvaal.	O.F.S.	Union.
Under £100.....	13·2	4·4	7·5	23·0	10·0
£100-£199.....	20·8	12·7	14·0	23·1	16·8
£200-£299.....	19·9	20·0	16·8	16·1	18·2
£300-£399.....	16·6	23·0	22·1	14·1	19·8
£400-Over.....	28·5	39·9	39·6	23·7	35·2
TOTAL.....	100·0	100·0	100·0	100·0	100·0
Median.....£	277	356	351	220	324

The figures for the Union as a whole indicate that roughly one-quarter of the urban families have income of less than £200 and about one-third have incomes exceeding £400. The median income is £324; that is, one half of the families have incomes smaller than that amount and one half have incomes larger than that amount.

12. Size of Family and Income : Urban.—Table 7 shows the distribution of families according to persons per family and annual income. These figures form the basis of the medians which appear in Table 11. The average income per family of two persons in all urban areas is £310; for a family of three it is £335; and for a family of four it reaches a maximum of £353. For larger families the average income decreases gradually and continuously until a minimum of £246 is reached for families of eight persons. Thereafter the income increases again, but only by a small amount, to £266 for families of eleven persons or more.

It is of interest to note that the trend just described applies not only to the Union as a whole but also to each individual province; that is, income rises to a maximum for families of four persons, then falls gradually to a minimum for families of eight and rises again for families of larger size. It may be shown, by means of the appropriate method of statistical analysis*, that the concordance between the provinces is not fortuitous but real. The explanation probably lies in the dominant income characteristics of families of different size. Families of two consist, for the greater part of couples newly-married on small incomes, and old couples living on old-age and other small pensions, etc. The financially comfortable or affluent urban family seldom consists of more than four or five persons. With the larger family there is generally associated a lower income with consequent poverty and even destitution (see next paragraph). The fact that the income rises after the family has reached a certain limiting size is probably due to additional earning power; families of ten persons are more likely to include children of age at which they earn than families of seven or eight. Unfortunately there is no information available to throw light on this matter.

Attention was drawn above to the fact that the provinces rank in the following order of decreasing income: Natal, Transvaal, Cape Province, Orange Free State. Examination of the figures in Table 11 shows that this holds for each size of family, except families of

* Kendall: *Advanced Theory of Statistics* ., pp. 16, 29-31.

two persons; in this latter case the average for the Transvaal slightly exceeds that for Natal. It may, therefore, be asserted with confidence that, if average urban family income be considered, the provinces rank in the order indicated above.

Comparison of families of the same size shows that urban income is about 4·5 per cent. higher in Natal than in the Transvaal; about one-quarter higher in the Transvaal than the Cape; and again one-quarter higher in the latter province than the Orange Free State.

13. Family Income : Cities, Towns, Villages.—Table 8 shows the distribution of families according to income and size of family for the twenty chief cities and towns of the Union. The relative figures for the four chief cities are as follows:

PROPORTION PER CENT OF FAMILIES.

Income.	Cape Town.	Durban.	Johannesburg.	Pretoria.
Under £100.....	5·5	3·6	4·9	5·6
£100-£199.....	17·4	12·0	12·8	16·2
£200-£299.....	20·6	19·1	16·9	17·7
£300-£399.....	19·1	23·5	21·9	21·2
£400+.....	37·4	41·8	43·3	39·3
TOTAL.....	100·0	100·0	100·0	100·0
Median.....£	331	365	369	350
Persons per Family.				
2.....	32·6	38·5	33·1	28·1
3-4.....	45·8	45·5	47·9	47·5
5-6.....	15·8	12·9	14·8	18·3
7+.....	5·8	3·1	4·2	6·1
TOTAL.....	100·0	100·0	100·0	100·0

Almost one-third of the families were *enumerated* in rural areas; and although some families who are normally resident in urban areas were enumerated in rural areas, and vice versa, the above ratio is probably correct for the proportion of families *resident* in rural areas. The differences between the provinces are very considerable. In Natal the rural ratio is only one-fifth, in the Transvaal about one-quarter, in the Cape one-third and in the Orange Free State more than one-half. These differences are mainly due to local provincial conditions which determine the aggregations of population.

15. Source of Income : Rural Families.—Table 12 shows the distribution of rural families according to source of income—whether from farming or from non-farming operations. The following proportions are from that table:

Province.	Rural Families (per cent.) Farming.
Cape (proper).	73·8
Transkei.	32·4
Natal (proper).	53·5
Zululand.	43·2
Transvaal.	62·8
Orange Free State.	80·8
UNION.....	69·1

These figures taken in conjunction with those of the preceding paragraph show that:

- (i) The Orange Free State not only has the greatest proportion of families living in rural areas, but that of such rural families a larger proportion are engaged in farming than in any other province.
- (ii) Natal has the smallest ratio of families living in rural areas and of such rural families also the smallest proportion engaged in farming.

Families with farming as the main source of income, including those resident in urban areas, are distributed as follows amongst the provinces:

Cape.....	43 per cent.
Natal.....	5 per cent.
Transvaal.....	33 per cent.
Orange Free State.....	19 per cent.
Union.....	100 per cent.

On comparing these figures with the effective farming areas of the provinces it may be shown that the Orange Free State is most densely populated with farming families and the Cape the least densely populated. It must be pointed out, however, that the above conclusions are based on European families only.

16. Rural Non-Farming Families—General.—The ratio of rural non-farming families differs appreciably from the one district to another. In districts which contain some city or large town the proportion is generally high owing to the fact that many families live outside the municipal boundaries but derive their income from activities inside the city or town. Elsewhere again, the proportions of non-farming families are high owing to large numbers of persons engaged in mining (Pilgrims Rest), alluvial digging (Barkly West), rail or road construction and maintenance (Cathcart, Victoria West) forestry (Knysna) or fishing, etc. The following districts may be mentioned as having particularly high ratios of non-farming families. The figures following are percentages.

Province.	Ratio (per cent.) Rural Families.	Percentage of Population Resident in Rural Areas (Census 1941).
Cape.....	34·2	32·8
Natal.....	19·7	18·4
Transvaal.....	26·1	27·2
Orange Free State.....	57·2	51·2
UNION.....	31·2	30·6

Cape Province.... Knysna, 72 ; Cathcart, 61 ; George, 40 ; Humansdorp, 41 ; Stutterheim, 44 ; Victoria West, 41 ; Taung, 37 ; Barkly West, 37 ; De Aar, 33 ; Piquetberg, 34.

Natal..... Here the ratio of non-farming families is high in all districts.

Transvaal..... Pilgrims Rest, 88 ; Barberton, 74 ; Nelspruit, 52 ; Bloemhof, 52 ; Carolina, 48 ; Christiana, 40.

Orange Free State. Ventersburg, 30 ; Thaba 'Nchu, 29.

17. Rural Regions.—Agricultural conditions vary considerably within each of the four provinces of the Union and there are often great differences between adjacent districts. Under these circumstances provincial totals and averages in regard to some characteristic are not of much value and may even be misleading. For this reason it is considered desirable to group the districts of each province into more or less homogeneous regions. This grouping is necessarily arbitrary but attention was paid as far as practicable to the income levels and the land-holding patterns. The number of regions in each province is as follows:—Cape, 24; Natal, 10; Transvaal, 16; Orange Free State, 10. Sometimes, as for example, in the case of Brits, a district differed so much from the adjacent districts that it was considered advisable to treat such a district as a region on its own. The grouping adopted is shown in Annexure B.

The device here described makes it possible to obtain some picture of the variation in income level within each province. It also enables us to visualize changes in the land-holding pattern from one part of the country to another.

18. Scope and Descriptions of Farm Income.—The income of farming families was also declared in grades; that is, whether the income was "under £50", "from £50 to £100", etc. There were five of these grades, the last being "£200 and over". In many districts or regions more than one-half of the families, especially if owners, declared incomes of £200 or more and in such cases the calculation of median incomes is impossible. The device was therefore adopted of measuring the level of income by means of the proportion of families with incomes of £200 and more. This was done for each class of land-holding family in each region—provided there were about 100 families or more of each class in the region concerned. The figures are shown in Tables 15–18.

Special attention is directed to the fact that farming families were required to include as income, in addition to wages, salary, pension and interest, the gross money income from the sale of farm produce and the estimated money value of income in kind such as farm produce. It is impossible to say whether, or to what extent, this was done. It is no doubt true that the money value of farm produce raised or received for home consumption varies from one region to another and it is thus possible that the level of income as shown in this survey for, say, region A, may not be lower than that for, say region B, but higher if income from all sources were included.

19. Class of Landholder.—Each farming family was required to state to which of the following four classes it belonged: owner, tenant, bywoner, employee. These terms were not defined and it is therefore possible that the classification is not unambiguous—especially as regards tenants and bywoners.

Table 14 shows that 54 per cent. of the families were land-owners and that the proportion was highest in Natal (68 per cent.); in the Cape it was lowest at 50 per cent. The next largest class, namely tenants, constituted 23 per cent. or nearly one-quarter of the total. This class was proportionately far more numerous in the Cape and the Transvaal than in the other two provinces. Bywoner families constituted 17 per cent. or about one-sixth of the total and were relatively far more numerous in the Orange Free State (24 per cent.) than in the other provinces. The ratio for this type was lowest in Natal (7·8 per cent.) Employee families contributed 6 per cent. to the total and in the Cape and Natal respectively represented 9–10 per cent. of all families. In the other two provinces this last type was very uncommon.

20. Class of Land-holding Family : Cape.—In the Cape Province as a whole 50·4 per cent. of the families were owners, 26·2 per cent. tenants, 13·9 per cent. bywoners and 9·5 per cent. employees. There were only five regions out of 24, in which more than 60 per cent. of the families were land-owners, namely:

Region.	Per Cent. Owner Families.	Districts.
1	62	Cape, Simonstown, Walberg.
2	63	Paarl, Somerset West, Stellenbosch, Wellington.
19	64	Vanderbijlpark, Steynsburg, Maraisburg, Cradock, Tarka, Somerset East, Bedford, Adelaide.
22	62	Albany, Alexandria, Bathurst.
23	64	Border districts.

It will be noticed that the areas with the highest proportion of owner-families are situated in the extreme South-west and in the East and North-east. These are also, incidentally, the regions where the price of land is well above the average.

At the other extreme are the following four regions where the proportions of owner-families are below 45 per cent.

Region.	Per Cent. Owner Families.	Districts.
3	41	Bellville, Hopefield, Malmesbury, Piquetberg, Tulbagh.
4	41	Bredasdorp, Caledon.
17	29	Gordonia.
18	43	Kuruman, Mafeking, Taung, Vryburg.

The first two of these regions are pre-eminently the wheat-growing areas of the south-western Cape and the last two border on the Bechuanaland Protectorate in the extreme north.

Employee families are most numerous, relatively, in the three Atlantic Coast districts of Malmesbury, Hopefield and Piquetberg and the Karroo district of Graaff-Reinet. In each of these districts such families constitute about one-third of the total.

Bywoner families constitute about one-third in each of the following districts, all of which are situated on or near the south coast: Caledon, Swellendam, Heidelberg, Riversdale, Calitzdorp, Oudtshoorn and Uniondale.

Tenant families are by far the most numerous in the vast districts of the north and north-west. The regions chiefly concerned are Nos. 13, 14, 16, 17 and 18. These range from Piquetberg and Sutherland in the south to the Bechuanaland border. Generally speaking the proportion of tenant families exceeds one-third in all these districts, and increases as one proceeds northwards. In Taung the proportion is about three-quarters, and in Gordonia two-thirds. In many cases the owners from whom the land is rented are probably absentee landlords. Mention must also be made of the high proportion of tenant families in the north-eastern districts of Molteno, Wodehouse (Dordrecht), Elliot and Maclear in each of which the ratio is about one-third.

21. Class of Land-holding Family : Natal.—The 5,044 farming families enumerated in Natal were distributed as follows:—

Owners, 68 per cent.; Tenants, 15 per cent.; Bywoners, 8 per cent.; Employees, 9 per cent. The ratio of owner-families were particularly high in the following regions:—

Region.	Per Cent. Owner Families.	Districts.
5	75	Camdeboo, Impendle, Ixopo, Lions River, Polela, Richmond, Underberg.
6	77	Kranskop, New Hanover, Richmond.
8	73	Estcourt, Weenen.

These regions are situated, almost exclusively, in the middle-veld.

Employee families are of numerical importance in only two regions, namely the north coastal districts of Inanda and Lower Tugela and in the neighbouring Zululand area.

Tenant families are relatively numerous in the lower highveld, region 7, and the lower middel-veld, region 5.

Bywoner families are confined, almost exclusively, to the northern highveld.

22. Class of Land-holding Family : Transvaal.—The 33,873 farming families enumerated in the Transvaal are distributed as follows:

Owner, 53·9 per cent.; tenant, 24·9 per cent.; bywoner, 17·7 per cent.; employee, 3·5 per cent. The proportion of owner-families is well above the average in the eastern part of the province, especially the districts of Belfast, Carolina, Barberton, Ermelo and Wakkerstroom; in the south-western districts of Bloemhof and Wolmaransstad and the northern district of Pietersburg. In most of the other districts the ratio is very near to 50 per cent. except in the following three: Brits, where the proportion of owner-families is only 36 per cent., but of tenant-families the highest in the province (54 per cent.); Heidelberg which has the record proportion of bywoner families (31 per cent.); and Potgietersrust where bywoner and tenant-families constitute approximately one-quarter each.

Generally speaking, bywoner families are relatively numerous in the southern zone extending from Standerton and Heidelberg to Lichtenburg. Tenant families, again, are of greater numerical importance in the central areas from Middelburg to Rustenburg and Marico; this applies especially to Middelburg and Brits. The only district where employee families are of relative importance is Nelspruit where they constitute about one-quarter of the total.

23. Class of Land-holding Family : Orange Free State.—The 19,958 farming families enumerated were distributed as follows:—Owner, 59·6 per cent.; tenant, 14·0 per cent.; bywoner, 23·7 per cent.; employee, 2·7 per cent. This province ranks second to Natal as regards the ratio of owners and has the highest proportion of bywoner families and the lowest proportions of tenants and employees. Owner families are relatively most numerous in the south and south-western districts of Bloemfontein, Edenburg, Reddersburg, Trompsburg, Phillipolis and Fauresmith.

Bothaville has the highest proportion of bywoners (40 per cent.) This class of family is also particularly numerous in the extreme northern districts of Vredefort, Heilbron and Frankfort and the adjacent districts to the south, namely Kroonstad, Lindley and Senekal. It is interesting to recall that bywoner families are also very numerous in the adjacent districts of the Southern Transvaal.

The highest proportions of tenant families occur in the south-eastern districts of Rouxville and Smithfield and the north-eastern districts of Bethlehem and Harrismith. Here, again, we recall that tenant families are particularly numerous in the adjacent districts of the Natal highveld (lower) and the north-east Cape.

Employee families are nowhere of numerical importance.

24. Income of Farming Families : Union.—Table 13 shows the distribution of rural farming families according to income and class of family. The following are the proportional distributions for all families combined:—

PERCENTAGE OF FAMILIES.

Income.	Cape.	Natal.	Transvaal.	O.F.S.	Union.
Under £50.....	20·0	10·5	31·9	17·3	22·9
£50–£99.....	22·0	11·3	23·9	25·4	22·8
£100–£149.....	13·4	10·5	13·6	13·9	13·4
£150–£199.....	8·7	10·0	8·6	9·0	8·8
£200+.....	35·9	57·7	22·0	34·4	32·1
TOTAL, %.....	100·0	100·0	100·0	100·0	100·0
No.....	43,057	5,044	33,873	19,958	101,932
Median.....£	130	Over 200	88	126	116

Of all the rural farming families enumerated in the Union 32 per cent. or very nearly one-third had incomes exceeding £200 and 46 per cent. had incomes of less than £100. The median income was £116, that is, one-half of the families had incomes exceeding this amount and the other half had incomes less than that amount. The distributions shown above suggest that Natal families had the highest incomes; next follow the Cape and the Orange Free State with very little difference between them, the evidence being perhaps in favour of the Cape being second and the Orange Free State third. Family income is definitely lower in the Transvaal than any other province.

We have seen (paragraph 19, Table 13) that the numerical relationship between the different classes of families varies considerably from one province to another. Table 13 shows also that there are very significant differences between the income distributions of different classes of families within the same province. Under these circumstances a more reliable ranking of the provinces would be obtained if similar classes of families were contrasted. If the various characteristics of the income distributions be taken into account, that is, the medians and the proportions of families with incomes exceeding £200 or less than £100, we obtain the following rankings. (Here C stands for Cape Province, N for Natal, T for Transvaal and O for Orange Free State).

Class of Family.	INCOME RANKING.			
	1st.	2nd.	3rd.	4th.
Owner.....	N.	C.	O.	T.
Tenant.....	N.	C.	T.	O.
Bywoner.....	C.	N.	O.	T.
Employee.....	N.	T.	O.	C.

If the ranking be based on owner-families only we obtain the following order, which is no doubt the most trustworthy: Natal, Cape, Orange Free State, Transvaal. This is precisely the order found above from the ranking of all families irrespective of class. Natal families appear to have the highest income on all rankings except that of bywoners; such families are, however, relatively few in Natal and the ranking is not quite reliable. Cape families again have higher incomes than those of either the Transvaal or the Orange Free State, except in the case of employee families; these rank high in the Transvaal but low in the Cape.

On ranking the four different classes of families in each province according to income we find that the owner-family has invariably the highest income and the bywoner family the lowest. In Natal and the Transvaal employee families have higher incomes than tenant families but in the Cape and the Orange Free State the reverse is the case. These differences may be due to the nature of the employee—whether mere farm labourer or foreman.

25. Income of Rural Farming Families : Cape Regions.—Perhaps the best way of contrasting family income between regions is to base the comparison on owner families only.

In the Cape Province there were eight regions in which three-quarters or more of the owner-families had incomes exceeding £200. These were as follows:—

Region.	Per Cent. Owner Families over £200.	Districts.
21	94	Colesburg, De Aar, Hanover, Phillipstown, Richmond.
2	84	Paarl, Somerset West, Stellenbosch, Wellington.
15	83	Britstown, Hopetown, Victoria West.
20	82	Graaff-Reinet, Middelburg, Pearson.
19	81	Adelaide, Bredasdorp, Cradock, Maraisburg, Somerset East, Steyning, Tarka, Venterstad.
12	79	Aberdeen, Beaufort West, Murraysburg.
5	79	Montagu, Robertson, Worcester.
3	75	Bellville, Hopefield, Malmesbury, Piquetberg, Tulbagh.

According to these figures income appears to be highest in the central, eastern and northern Karroo—apart from a few districts in the south-west Cape. Incomes are at approximately the same level in all the districts of a specific region, with the following few exceptions: In Hopetown income is distinctly lower than in the other two districts of region 15; in Pearson it is lower than in Graaff-Reinet or Middelburg; in Maraisburg it is lower than in the surrounding districts of region 19; and in Piquetberg it is lower than in Hopetown or Malmesbury.

In the following seven regions fewer than 40 per cent. of the owner-families had incomes exceeding £200:—

Region.	Per Cent. Owner Families over £200.	Districts.
6	39	Heidelberg, Riversdale, Swellendam.
16	38	Barkly West, Herbert, Kimberley.
1	37	Cape, Simonstown, Wynberg.
7	34	Calitzdorp, Ladismith, Oudtshoorn, Uniondale.
17		

27. Income of Rural Farming Families : Transvaal Regions.—The income of owner-families is highest in the following regions :—

Region.	Per Cent. Owner Families over £200.	Districts.
6	60	Barberton, Nelspruit.
9	52	Letaba, Pilgrims Rest.
4	51	Bethal, Standerton, Ermelo.
5	48	Volksrust, Piet Retief, Wakkerstroom.

All these districts are situated in the eastern and south-eastern part of the province. Barberton has comparatively few farming families (paragraph 16) but income appears to be higher there than elsewhere. Other outstanding districts are Ermelo and Letaba.

In the following regions family income was generally the lowest :—

Region.	Per Cent. Owner Families over £200.	Districts.
16	23	Bloemhof, Christiana.
15	22	Schweizer Renecke, Wolmaransstad.
11	21	Potgietersrust, Waterberg.
10	21	Pietersburg, Zoutpansberg.
13	19	Marico, Pretoria, Rustenburg.

All these districts, except Pretoria, are situated in the western or far-northern part of the province. As far as the south-west regions (15, 16) are concerned, income appears to be significantly lower in Wolmaransstad and Bloemhof than in the other districts. The lowest incomes were recorded in Marico and Waterberg; In the latter district 17 per cent. of the owner-families declared their income as exceeding £200 and in Marico only 14 per cent. It is interesting to note that: (i) income is significantly higher in Rustenburg which lies intermediate between Marico and Waterberg; (ii) in the mid-western districts of Lichtenburg and Ventersdorp income is higher than in the south-west or the north-west; (iii) Marico, the district with lowest income is adjacent to Mafekeng where, as we have seen, income is exceedingly low.

In Pietersburg income is considerably lower than in any of the surrounding districts.

Special mention must be made of *tenant-families*. These are of great numerical importance in the west and in some central districts, particularly Brits, Pretoria and Middelburg. In most of these districts family income is very low and there is hardly any area in which more than 12 per cent. of the families have incomes exceeding £200; in Middelburg the ratio is only 7·9 per cent and in Waterberg 5·2 per cent. In Brits, however, the position is very different; here there are more tenant than owner-families and 40 per cent. of the former have incomes exceeding £200 while the ratio for the latter is 43 per cent. This district is unique in this respect that tenant and owner families are more or less on an equal footing as far as income is concerned.

28. Income of Rural Farming Families : Orange Free State Regions.—The highest family incomes were recorded in the following regions :—

Region.	Per Cent. Owner Families over £200.	Districts.
6	70	Bethulie, Dewetsdorp, Trompsburg, Smithfield.
7	65	Rouxville, Wepener, Zastron.
1	65	Clocolan, Ficksburg, Fouriesburg, Ladybrand, Thaba 'Nchu.

All these districts are situated in the mid-eastern and south-eastern part of the province. The figures suggest that income decreases in a north-easterly direction; thus in Fouriesburg it is distinctly lower than in the districts immediately to the south.

The lowest incomes were recorded in the following two regions :—

Region.	Per Cent. Owner Families over £200.	Districts.
4	35	Frankfort, Heilbron, Vredefort.
10	34	Boshof, Bothaville, Hoopstad, Jacobsdal.

These regions fall into two zones, the first in the extreme north and the second in the west. In the northern group Vredefort appears to have the lowest income and in the west the lowest income was recorded in Boshof; here only 24 per cent. of the families were returned as having incomes exceeding £200.

29. Size and Income of Rural Farming Families.—It was pointed out, in paragraph 13, that the size and income of urban families were negatively correlated; that is, the smaller the income the bigger the family. This theory may also be tested for rural families but the method is somewhat more complicated. Three factors must be taken into consideration :—

1. Average size per rural family.
2. Average income per rural family.
3. The proportion of owner families.

Tables 15-18 show the number of persons per rural farming family in each region but these figures are based on all families irrespective of class. If the size per *owner-family* had been available then the correlation could have been effected directly with the income per owner-family. In the absence of such figures it is necessary to correlate size and income of all families without regard to class and then to eliminate the effect of ownership on income and size of family. The last step is necessitated by the fact that owner incomes are larger than those of other classes of families and the ratio of owner-families varies considerably from one region to another. The partial rank correlation coefficients* are found to be as follows :—

Cape, -46; Natal, -12; Transvaal, -54; Orange Free State, -67.

All the coefficients are negative and all are statistically significant except that for Natal. This means that there is an inverse relationship between the size and income of the rural farming family, the smaller the income, the larger the family and vice versa. It must be emphasized that the figures merely prove the existence of the relationship but do not state that low incomes are the cause of large families.

The following figures show the *median income* according to size of family. All the medians for Natal are over £200 and have, therefore, been omitted :—

Size of Family.	FARMING FAMILIES : MEDIAN INCOME.			
	Cape.	Transvaal.	O.F.S.	Union.
2.....	£137	£87	£125	£119
3.....	139	90	132	122
4.....	142	92	136	125
5.....	131	90	133	118
6.....	115	84	108	103
7.....	105	76	95	94
8.....	97	77	89	91
9.....	90	78	97	87
10+.....	96	88	89	92

These figures which are based on Table 20 exhibit almost exactly the same sort of variation as was observed in the case of urban families (paragraph 12). Income rises to a maximum for families of four persons and then decreases as the size of family becomes greater and greater. There is also evidence that for very large families the income rises again.

30. Family Income and Price of Land.—It is reasonable to enquire whether a relationship exists between the price of land per morgen in a region and the family income in that region; and if so, the nature of that relationship. Theoretically we should expect a high level of income in a region where the price of land is high and *vice versa*. To test this theory we utilize the prices as disclosed by the transfers of rural property during the year ended March, 1941. District transfers were grouped into regions coterminous with those of this report and the prices so obtained correlated with the proportions of owner-families who received incomes exceeding £200.† The coefficients were found to be as follows :—

Cape, -15; Natal, -38; Transvaal, -33; O.F.S., -24.

All these coefficients are positive and statistically significant; that is, they furnish evidence in conformity with theoretical expectations. The method of calculation has the merit of pointing to regions which are serious exceptions to the rule. Thus in the

Transvaal region 3 which includes the districts of Heidelberg, Nigel, Springs and Vereeniging we find that the price of land is much higher than family income would lead us to expect. The inference is that the price does not reflect the purely agricultural value of the land in this region. It is known, in fact, that the price of rural land in this region is much inflated by a large proportion of transfers of building and industrial sites. The same situation is found in the case of Cape region 8 (George, Knysna and Mossel Bay) and several others.

32. Singly Living Non-Family Persons.

—Tables 21-23 contain information in regard to persons who were detached from their families and lived singly, presumably for the greater part in hotels, boarding houses, etc. It should especially be noted that the total of 149,742 includes 46,610 persons who constituted households (see paragraph 2 and Table 1). The majority of these singly-living persons are to be found, as would be expected, in the chief urban areas. Thus out of the 51,276 persons enumerated in the Transvaal, two-thirds were in Johannesburg and Pretoria; and of the 16,655 enumerated in Natal two-thirds were in Durban; similarly of the Cape total 59 per cent. were enumerated in Cape Town, Port Elizabeth, East London and Kimberley.

In urban areas singly-living females predominate in all the provinces except Natal; in rural areas the reverse is the case, males being in the majority.

In considering the income, which is very low on the average, it must be remembered that many of these persons live on old-age and other pensions or on receipts from boarders and lodgers; others again, especially in urban areas, are young and have only been working for a few years and, in many cases, for less than a full year.

* Kendall: "Biometrika", pp. 32, 277 (1942).

† The Kendall coefficient of rank correlation was used; see Kendall *Advanced Theory of Statistics*, Chapter 16.

CENSUS, 6th MAY, 1941.

FORM FOR FAMILY AND INCOMES (to be attached to Form C. 1).
(TO BE FILLED IN BY THE GOVERNMENT ENUMERATOR.)

Number of House and Name of Street _____
 OR
 Name and Number of Farm or Holding _____

Magisterial District _____
 Enumerator's Sub-District No. _____
 Town _____
 Form No. _____
 (Same as Householder's Form C. 1.)

Fill in usual number of persons (excluding servants) in this household, i.e., who usually live in this dwelling, whether present or not on Census night:-

			Number.
	Males.	Females.	Persons.
1. FAMILY.....	Head and/or Wife.....		
	Children under 16 years of age.....		
	Children 16 years and over.....		
	TOTAL IN FAMILY.....		
2. OTHERS.....	Other relatives and guests of family residing permanently in dwelling (all ages)		
	Other regular lodgers (all ages).....		
	TOTAL IN HOUSEHOLD (Family and others).....		
3. Particulars of PRINCIPAL BREADWINNER supporting family.	Sex _____	Home Language _____	
	Whether Never Married, Married, Widowed or Divorced _____		
	Occupation in Normal Civil Life _____		
	If on Military Service, write "M." _____		
4. Number of persons in FAMILY (shown in 1 above) earning or receiving income			
5. TOTAL COMBINED INCOME of HEAD AND OF ALL OTHER MEMBERS OF FAMILY (AS SHOWN IN 1 ABOVE) FROM ALL SOURCES DURING 12 MONTHS, 1ST MAY, 1940, TO 30TH APRIL, 1941 :-			

Fill in either A or B, not both. (See Note 5.)

A. For persons in NON-FARMING OCCUPATIONS.

Income Group.	
No Income.....	
Under £50.....	
£50 to £99.....	
£100 to £149.....	
£150 to £199.....	
£200 to £249.....	
£250 to £299.....	
£300 to £349.....	
£350 to £399.....	
£400 and over.....	

Do not give the actual amount of income, but mark only the income group with a X.

B. For persons engaged in FARMING OPERATIONS.
(If farming, mark applicable space with a X.)

Farm :	Dwelling :
Owner.....	Owned.....
Tenant.....	Free.....
Byowner.....	Rented.....
Employee....	

Does family raise or receive farm produce for own use?

Yes.....	
No.....	

Combined gross income of whole FAMILY (shown in 1 above) from all sources : produce, wages, etc., reckoned in money.

No money income.....	
Under £50.....	
£50 to £99.....	
£100 to £149.....	
£150 to £199.....	
£200 and over.....	

Do not give the actual amount of income but mark only the income group with a X.

Signature.

SENSUS VAN DIE BLANKE BEVOLKING, MEI 1941.

VERSLAG OOR BLANKE GESINNE EN INKOMSTE.

1. **Algemeen.**—Tesame met die algemene Sensus wat op 6 Mei 1941 opgeneem is, is daar vir die eerste keer inligting in verband met die samestelling van blanke gesinne en hulle inkomste ingewin. 'n Afskrif van die vorm wat in hierdie verband gebruik is, is aangeheg. (Aanhangsel A.) Die tabel wat gebruik is om die struktuur van huisgesinne en gesinne vas te stel, word gerieflikheidshalwe hieronder weergeege. Die gesinshoof is gevra om :

„die gewone getal persone (bedienende uitgesonderd) in hierdie huisgesin in te vul, dit wil sê diegene wat gewoonlik in hierdie huis woon, of hulle in die Sensusdag teenwoordig is of nie“.

Dit betrek veral dat persone wat tydelik van hulle huisgesinne geskei is as gevolg van besigheid van vakansies, opvoeding, militêre diens, ens., op die vorm vermeld moes word.

GETAL.			
	Manlik.	Vroulik.	Personne.
1. GESIN— Hoof en/of eggenechte.....			
Kinders onder 16 jaar oud.....			
Kinderen van 16 jaar en ouer.....			
TOTAAL IN GESIN.....			
2. ANDER— (a) Ander familiebetrekkinge en gaste van gesin wat permanent in huis woon (alle leeftye).....			
(b) Ander geseledeloseerders (alle leeftye).....			
TOTAAL IN DIR HUIS (Gesin en Ander).....			

2. **Woordbepaling.**—Die term *huisgesin* is nie duidelik omskryf nie maar die betekenis wat in die vorm en in hierdie verslag daaraan verbondne is, is wesenslik dieselfde as dié van die volgende omskrywing wat in die Kanadese sensus van 1941 gebruik is. 'n *Huisgesin* word omskryf as :

„'n persoon of groep persone wat in een huishoudelike gemeenskap woon. Die persone kan wel familiebetrekkinge wees of nie, maar as hulle met gemeenskaplike huishoudelike reëlings saamlewe, vorm hulle 'n huisgesin . . . tweé of meer huisgesinne kan in dieselfde huis woon. As hulle in afsonderlike dele van dieselfde huis woon en hulle huishoudings geheel en al geskei is, moet hulle as afsonderlike huisgesinne behandel word.“

Vir die doel van die Sensusonderzoek beteken 'n GESIN—
(i) 'n egaar wat geen kinders het nie;
(ii) die vader, moeder en kinders, met inbegrip van stiefkinders of aangenome kinders;
(iii) die oorlewende ouer en sy of haar kinders;
(iv) waar albei ouers oorlede is, die broers en susters wat as 'n gesin saamlewe;
(v) die grootouer(s) en verweesde kleinkinders;

Die lede van die gesin word dus feitlik beperk tot persone wat in 'n verhouding van eggenoet-eggeneote of ouer-kind lewe, en kom dus nie ooreen met die groep persone wat die huisgesin vorm nie. Laasgenoemde bestaan telkens uit twee of meer gesinne en sluit baie dikwels persone in wat aan die hoof of sy eggenoete verwant is, soos 'n oom, niggie, moeder, ens., maar wat nie lede van sy eie gesin is nie.

Daar behoort opgemerk te word dat die definisie van gesin geen melding van die finansiële status van kinders maak nie. Die getroude kind vorm noodwendig 'n deel van sy eie gesin, apart van sy of haar ouers, selfs al woon hy of sy by hulle en is hy of sy finansiële afhanklik van hulle. Die kind wat finansiële afhanklik is, kan egter as 'n lid van die gesin getel word as hy of sy by die ouers woon; of as 'n ongetroude persoon sonder gesin, as hy of sy nie by die ouers woon nie. Aangesien skoliere en studente wat gewoonlik weg van die huis woon finansiële afhanklik is, word daar aangeneem dat hulle as lede van die gesin ingeval is. Dit is van belang om

op te merk dat (i) 'n huisgesin uit 'n ongetrouwe persoon kan bestaan; en (ii) verskeie gesinne in dieselfde huisgesin ingesluit kan wees.

Daar kan twee klasse van ongetrouwe persone sonder gesin onderskei word. In die eerste plek kry ons die ongetrouwe individu wat 'n huisgesin, soos omskrywe, vorm. So 'n persoon is gewoonlik 'n weduwee sonder inwonende kinders. Kosgangers, losseerders of familiebetrekkinge kan in dieselfde huis woon of nie. In die eerste geval het ons die *huisgesin van 'n ongetrouwe persoon* en in laasgenoemde die veelvoudige huisgesin waarvan die ongetrouwe persoon sonder gesin die hoof is. In die tweede plek het ons die *alleenwonende individu* wat los staan van sy gesin en vermoedelik finansiële onafhanklik daarvan is.

Hierdie persoon woon gewoonlik in 'n hotel of in 'n private losieshuis en kan aldus nie as 'n lid van 'n gesin of 'n huisgesin beskou word nie.

In die geval van huisgesinne wat uit meer as een gesin bestaan, het die hoofgesin, gewoonlik die een wat die huur betaal of aan wie die huis behoort, afdeling I van die vorm ingeval en die bykomende gesinne is by afdeling II ingeval as familiebetrekkinge, losseerders, ens. Elke bykomende gesin moes ook 'n vorm met betrekking tot sy eie struktuur en inkomste invul, maar in sulke sekondêre opgawes het die besonderhede van struktuur noodwendig in afdeling I verskyn. Dit is betrekurenswaardig dat die opgaaiform nie die getal gesinne in die huisgesin gevra het nie.

3. **Gesinne en huisgesinne.**—Die hoofdoel van die ondersoek was om gegevens betreffende die struktuur en inkomste van gesinne, en nie van huisgesinne nie, in te win. Dit is duidelik uit die opmerkings in die voorgaande afdeling dat die inligting betreffende die totale getal gesinne juis is (hoewel nie volledig nie) ten spyte van die feit dat sekere gesinne by ander losseer het. Dit is egter nie moontlik om tussen gesinne wat losseer en ander gesinne te onderskei nie daarom kan die juiste getal huisgesinne nie vasgestel word nie. Dit is egter moontlik om die persone wat in afdeling II van die vorm ingeval is, in die volgende twee groepe te verdeel: (i) die individu wat aan 'n gesin behoort, en (ii) die individu wat nie aan 'n gesin behoort nie. Die getal gesinne wat losseer kan dus bepaal word as ons veronderstel dat die gemiddelde ledetal oor die algemeen dieselfde is vir alle gesinne. Daar is rede om te dink dat die ledetal van die gesin wat losseer oor die algemeen kleiner is as dié van die onafhanklike gesin en die skatting is dus waarskynlik te laag. Om teoordeel na die totale getal persone moet die aantal gesinne wat losseer betreklik min wees, en dus kan foute in die skatting egter nie van veel belang wees nie.

4. **Deel van die bevolking wat opgeneem is.**—Aangesien hierdie die eerste geleentheid was dat 'n gesinsopname van die hele blanke bevolking gemaak is, is dit van belang om vas te stel watter deel van die totale bevolking, wat tydens die algemene sensus opgeneem is, deur die gesinsopname ingesluit is. Die volgende is die betrokke verhoudings; in Tabel I van die aanhangsels word getoon hoe hulle afgelyk is :

VERHOUDING PERSENT VAN TOTALE BEVOLKING WAT IN GESINSOPNAME INGESLUIT IS.

Provinse.	Stedelike.	Plattelandse.	Alle gebiede.
Kaapprovinsie.....	85·9	98·6	90·1
Natal.....	83·4	93·2	85·2
Transvaal.....	87·4	87·7	87·5
Oranje-Vrystaat.....	77·7	96·6	87·4
UNIE.....	85·8	93·7	88·2

Die hele blanke bevolking wat tydens die sensus in Mei 1941 opgeneem is, was 2,160,174, van wie 1,499,655 in stedelike gebiede, en 66,519 in plattelandse gebiede gewoon het. Hierdie syfers sluit 32,009 persone wat op militêre diens buite die Unie was, nie in nie, aangesien hulle nie aan stedelike of plattelandse gebiede toegevoeg kon word nie. Die gesinsopname het 1,286,361 in stedelike gebiede en 619,151 in plattelandse gebiede gedek. Die verhouding vir die hele Unie was 88 percent, dit wil sê ongeveer agt-negendes van die bevolking is by die gesinsopname opgeneem.

Daar is 'n baie belangrike verskil tussen die verhoudings vir stedelike en plattelandse gebiede. Die plattelandse verhouding is in elke provinsie behalwe Transvaal aansienlik hoër. Daar is tenminste twee redes vir hierdie verskil:

- (i) teen Mei 1941 het 'n baie groot aantal persone wat gewoonlik in plattelandse gebiede gewoon het, al na stedelike gebiede op militêre diens verskuwe en hulle gesinne agtergelaat. Wat die algemene sensus betref, is sulke persone in stedelike gebiede opgeneem, maar in die gesinsopname is hulle opgeteken as wonende in plattelandse gebiede.
- (ii) Baie kinders wat gewoonlik in stedelike gebiede skoolgaan en wat in die algemene sensus daar opgeteken is, woon permanent in plattelandse gebiede en is vermoedelik by die gesinsopnames daar opgeneem.

Daar kan met taamlike sekerheid gesê word dat bogenoemde verhoudings die opnames in plattelandse gebiede oorskot en hulle in stedelike gebiede onderskat. Die feit dat die verhoudings in Transvaal feitlik dieselfde is in plaas van 'n verskil toon, is waarskynlik die gevolg van baie groot militêre kampe in die plattelandse gebied van Pretoria.

Die verhoudings vir die groot stede en dorpe is interessant. In beide Kaapstad en Johannesburg is enigsins meer as 90 persent van die totale bevolking opgeneem maar in Pretoria, Pietermaritzburg en Bloemfontein was die verhoudings heelwat laer as die algemene gemiddelde. Hierdie toestand is waarskynlik die gevolg van die groot verskuwing van bevolking wat die oorlog teweeggebring het. Duisende persone wat in die algemene sensus veral in Pretoria, opgeneem is, moes op gesinsvorms op ander plekke, naamlik hulle gewone verblyfplek, ingeval geword het.

5. Huisgesinne.—Die provinsiale verspreiding van huisgesinne is die volgende:

Provinsie.	Stedelike.	Plattelandse.	Alle gebiede.
Kaapprovinse...	121,051	63,286	184,337
Natal...	41,681	10,552	52,233
Transvaal...	154,638	55,431	210,069
Oranje-Vrystaat...	19,010	24,784	43,794
UNIE...	336,380	154,053	490,433

Soos in paragraaf 3 aangedui word, is bostaande syfers nie akkuraat nie maar deels op 'n skatting van die getal gesinne wat by ander gesinne woon ofloseer, gebaseer. Daar is maar 'n klein persentasie sulke gesinne en die aard van die veronderstelling waarop die skatting gegrond is, toon dat die getal huisgesinne minder moet wees as dié wat hierbo getoon word, hoewel sekerlik niet nie meer as 1 persent nie. Die syfers verskaf terloops ook 'n bewys van die hoe mate van verstedeliking in Natal en die lae mate in die Oranje-Vrystaat.

Die uitvoerige syfers in tabel I toon dat daar 29,312 huisgesinne in stedelike gebiede is wat 'n ongetrouwe persoon sonder gesin aan die hoof het—gewoonlik 'n weduwee sonder kinders wat óf alleen óf met kosgangers of loseerders gewoon het. Die verhouding vir hierdie tipe huisgesine was dus 8·7 persent; die ooreenstemmende verhouding vir plattelandse gebiede was 8·6 persent. Daar is baie meer huisgesinne waarin daar slegs 'n ongetrouwe persoon is as huisgesinne waarin so 'n ongetrouwe individu sonder gesin familiebetrekings en loseerders het. Dit is redelik om aan te neem dat daar in stedelike gebiede baie meer geleenthed bestaan om loseerders in huis te neem as in plattelandse gebiede; die syfers in tabel I laat mens sterk onder die indruk kom dat voordeel uit hierdie feit getrek word.

Die persentasie huisgesinne wat uit 'n ongetrouwe persoon bestaan, is veleggend hoër in die groot stede Johannesburg (10·5 persent), Kaapstad (9·6 persent) en Durban (9·3 persent), as in die kleiner stede en dorpe. In Bloemfontein is daar buitengewoon min huisgesinne van hierdie tipe (3·1 persent).

6. Gesinne.—Die provinsiale verspreiding van gesinne is die volgende:

Provinsie.	Stedelike.	Plattelandse.	Alle gebiede.
Kaapprovinse...	114,190	59,237	173,427
Natal...	39,203	9,624	48,827
Transvaal...	153,087	53,975	207,662
Oranje-Vrystaat...	18,513	24,696	43,209
UNIE...	324,993	147,532	472,525

Die totale getal gesinne wat opgeneem is, was 472,525 waarvan 68·8 persent of ongeveer twee-derdes in stedelike gebiede woon. Hierdie gesinne kan as volg in drie klasse verdeel word:

- (i) Onafhanklike gesinne—sonder familiebetrekkinge of loseerders;
- (ii) Gesinne met familiebetrekkinge of loseerders by hulle;
- (iii) Loserende gesinne, dit wil sê gesinne wat by ander gesinne losseer (maar nie in hotelle of losieshuise nie).

In tabel I word besonderhede met betrekking tot hierdie drie klasse verstrekk. Die proporsionele verspreidings vir onderskeidelik stedelike en plattelandse gebiede is die volgende:

Gebied.	PERSENTASIE IN KLAS.			
	(i).	(ii).	(iii).	Totaal.
Stedelike.....	69·1	25·4	5·5	100·0
Plattelandse.....	77·1	18·3	4·6	100·0
ALLE GEBIEDE..	71·6	23·2	5·2	100·0

Van die stedelike gesinne woon 69 persent onafhanklik van ander gesinne, 25 persent het kosgangers, loseerders of familiebetrekkinge, en 5·5 persent woon by ander gesinne. As in aanmerking geneem word dat daar in plattelandse gebiede minder geleenthed is om loseerders in huis te neem, is die verskille tussen stedelike en plattelandse net wat mens sou verwag.

Dit blyk dat Durban die grootste persentasie gesinne het wat onafhanklik woon (73 persent), en Johannesburg die grootste verhouding gesinne wat losseer (6·7 persent).

Vergelyking met die syfers van die voorgaande afdeling toon dat daar meer huisgesinne as gesinne is; dit is nie alleen waar van elke provinsie nie maar ook van onderskeidelik stedelike en plattelandse gebiede. Die numeriese verhouding tussen huisgesinne en gesinne in enige gegewe gebied hang af van die mate waarin gesinne by ander gesinne losseer en die persentasie huisgesinne wat slegs uit 'n ongetrouwe persoon sonder gesin bestaan. In hierdie verband is dit van belang om op te merk dat huisgesinne die gesinne in elke provinsie van Kanada oortref het en dat die verskil in die land as 'n geheel 6·2 persent was; die ooreenstemmende syfer vir die Unie was 3·8 persent.

7. Struktuur van gesin.—Tabel 2 bevat besonderhede betreffende die struktuur van gesinne. As die betreklik klein aantal gesinne waarin daar net kinders is, uitgesluit word, is die proporsionele verdeling die volgende:

Gebied.	PERSENTASIE GESINNE.			
	Hoof en eggeneen alleen.	Hoof, eggeneen en kinders.	Enkel Hoof (M. of V.) en kinders.	Totaal.
Stedelike.....	26·1	64·8	9·1	100·0
Plattelandse—Boere.....	19·8	74·8	5·4	100·0
Nie boere nie...	25·7	69·5	4·8	100·0

Ongeveer een-kwart (26 persent) van die stedelike gesinne is kinderloos; die ooreenstemmende persentasie vir boeregesinne in plattelandse gebiede is veleggend kleiner, naamlik 19·8 persent. Wat die tipe betref, stem plattelandse gesinne wat nie boer nie meer ooreen met stedelike gesinne as boere. Die beskikbare inligting laat nie die klassifikasie van die kinderlose gesinne in verskillende tipes toe nie—byvoorbeeld, of hulle jong of ou pare is wat nooit kinders gehad het nie, of die kinders deur dood of huwelik verlore is, ens. Die persentasie gesinne wat slegs 'n ongetrouwe persoon aan die hoof het, is veleggend hoër in stedelike as in plattelandse gebiede. Dit is ook interessant om op te merk dat daar baie meer van hierdie gesinne is wat 'n vroulike persoon aan die hoof het as dié wat 'n man het.

8. Kinders in gesinne.—Tabel 3 bevat besonderhede betreffende die persone wat in alle gesinne ingesluit is. Die volgende syfers toon die gemiddelde getal kinders per gesin en die persentasies kinders onder 16 jaar oud.

PROVINSIE.	KINDERS PER GESIN.		PERSENTASIE KINDERS ONDER 16 JAAR.	
	Stedelik.	Platteland.	Stedelik.	Platteland.
Boere.		Nie boere nie.	Boere.	Nie boere nie.
Kaap.....	1·77	2·29	1·99	20·1
Natal.....	1·42	1·63	1·48	70·3
Transvaal.....	1·68	2·13	1·94	74·6
Oranje-Vrystaat.....	1·76	1·83	1·96	75·7
UNIE.....	1·68	2·11	1·92	72·1
				83·3

Die gemiddelde getal kinders per gesin is kleinste in stedelike gebiede (1·68) en grootste onder boeregesinne in plattelandse gebiede (2·11). Die gemiddeldes vir Natal is laer as dié vir die ander provinsies; dit stem ooreen met die bekende feit dat die blanke geboortesyfer in Natal laer is as op ander plekke. Daar behoort opgemerk te word dat bostaande gemiddeldes op alle gesinne, met inbegrip van dié waarin daar geen kinders is nie, gebaseer is.

Die tweede deel van bostaande tabel toon dat amper drie-kwart van die kinders jonger as 16 jaar oud is. Die persentasies vir jong kinders is veleggend hoër in plattelandse gesinne wat nie boer nie, as in ander. Dit is op al die provinsies van toepassing. Hierdie gesinne behoort aan baie industriële groepe maar veral aan handel, mynontginning en spoedelwerye, konstruksie en instandhouding van paaie en spoorweë, bosbou en visserij. Hulle sluit ook 'n aansienlike deel in van die onderskeidelike gesinne wat hulle inkomste uit bedrywigheid in die groot stede en dorpe verkry.

9. Persone per gesin.—Tabel 5 toon die verspreiding van gesinne volgens die getal persone, met inbegrip van die hoof, eggeneen en kinders. Gesinne wat slegs uit twee persone bestaan, word bereken op 28·6 persent, of enigsins meer as een-kwart van die totaal. Verreweg die meeste van hierdie gevalle is 'n egaar; maar tabel 2 toon dat daar 37,250 gesinne is wat slegs een persoon—manlik of vroulik—aan die hoof het en 18,424 van hulle bestaan slegs uit twee persone, naamlik een kind saam met 'n vader of moeder of grootouer. Ons kan dus aanneem dat die 37,250 minus 18,424 gesinne, of 18,826 gesinne met een hoof en twee of meer kinders, op 'n *pro rata* grondslag tussen die 337,642 gesinne van drie of meer persone verdeel is. Met hierdie veronderstelling kry ons die volgende verspreiding volgens die getal kinders:

Kinders per gesin.	Getal gesinne.	Kinders per gesin.	Getal gesinne.
0.....	116,459	6.....	9,678
1.....	129,862	7.....	4,819
2.....	99,662	8.....	2,453
3.....	58,721	9+.....	1,863
4.....	32,040		
5.....	16,967	TOTAAL.....	472,525

Uit bostaande verspreiding kan daar bereken word dat die totale getal kinders ongeveer 849,300 was, in vergelyking met die 850,126 wat werklik opgeneem is (tabel 3). Vir alle praktiese doeleindes kan bostaande syfers dus as akkuraat genoeg aangeneem word.

Tabel 5 toon ook dat gesinne van vier persone of minder drie-kwart (77 persent) van die stedelike en twee-derdes (68 persent) van die plattelandse totaal vorm. Groot gesinne kom proporsioneel meer voor in plattelandse as in stedelike gebiede. Ons vind byvoorbeeld dat daar in 2·95 persent van die stedelike gesinne agt of meer persone is, maar in plattelandse gebiede is die ooreenstemmende verhouding nie minder as 5·62 persent nie. Hierdie feit blyk ook duidelik uit die volgende gemiddeldes:

GEMIDDELDE GETAL PERSONE PER GESIN.

PROVINSIE.	Stedelike.	PLATTELANDSE.		
		Boerdery.	Nie boerde nie.	Totaal.
Kaapprovinse.....	3·658	4·23		

dit is meer waarskynlik dat gesinne van tien persone kinders sal insluit wat oud genoeg is om te verdien, as gesinne van sewe of agt. Daar is ongelukkig geen beskikbare inligting wat lig op hierdie saak kan werp nie.

Aandag is hierbo gevestig op die feit dat die provinsies se inkomste in die volgende volgorde verminder: Natal, Transvaal, Kaapprovinsie, Oranje-Vrystaat. 'n Onderzoek van die syfers in tabel 11 toon dat dit die geval is vir gesinne van alle groottes behalwe gesinne van twee persone; in hierdie laasgenoemde geval is die gemiddelde vir Transvaal effens hoër as vir Natal. Daar kan dus met sekerheid verklaar word dat, as die gemiddelde stedelike gesinsinkomste in oorweging geneem word, die provinsies in die volgorde wat hierbo aangedui is, te staan kom.

Vergelyking van gesinne van dieselfde grootte toon dat stedelike inkomste in Natal ongeveer 4-5 persent hoër is as in Transvaal; ongeveer een-kwart hoër in Transvaal as in die Kaap; en weer een-kwart hoër in laasgenoemde provinsie as in Oranje-Vrystaat.

13. Gesinsinkomste: stede en dorpe.—Tabel 8 toon die verspreiding van gesinne, volgens inkomste en grootte van gesin, in die twintig vernaamste stede en dorpe in die Unie. Die relatiewe syfers vir die vier vernaamste stede is die volgende:

PERSENTASIE GESINNE.

Inkomste.	Kaapstad.	Durban.	Johannesburg.	Pretoria.
Onder £100.....	5·5	3·6	4·9	5·6
£100-£199.....	17·4	12·0	12·8	16·2
£200-£299.....	20·6	19·1	16·9	17·7
£300-£399.....	19·1	23·5	21·9	21·2
£400+.....	37·4	41·8	43·3	39·3
TOTAAL.....	100·0	100·0	100·0	100·0
Mediaan.....	331	365	369	350
Personne per gesin.				
2.....	32·6	38·5	33·1	28·1
3-4.....	45·8	45·5	47·0	47·5
5-6.....	15·8	12·9	14·8	18·3
7+.....	5·8	3·1	4·2	6·1
TOTAAL.....	100·0	100·0	100·0	100·0

Die mediaaninkomste blyk hoër te wees in Johannesburg (£369) as in Durban (£365); in eersgenoemde stad is die verspreiding enigsins „platter”, dit wil sê, daar is proporsioneel meer gesinne met baie lae en baie hoë inkomste as in Durban. Die inkomste in Pretoria is enigsins laer as in die vorige twee stede en in Kaapstad nog laer.

Die tweede deel van die table toon dat die gemiddelde gesin in Durban die kleinste is; dan volg Johannesburg, Kaapstad en Pretoria in dié volgorde.

Tabelle 9 en 10 bevat besonderhede betreffende inkomste en grootte van gesin vir feitlik al die kleiner dorpe en dorpies met ongeveer 400 gesinne of meer. Die aangeleide syfers sluit die mediaan-inkomste vir elke stad en persentasie gesinne met 'n inkomste van minder as £200 in; ook die gemiddelde getal persone per gesin en die persentasie gesinne van sewe of meer persone.

Uit die syfers vir hierdie vyftig dorpe en dorpies kan daar aange- toon word dat gesinsinkomste negatief gekorrelleer is met grootte van gesin, en dat die korrelasie-koeffisiënt tellend is. Dit beteken dat klein gesinne gewoonlik met groter inkomste gepaard gaan, en omgekeerd. Die volgende dorpe steun hierdie reël opvallend: Stutterheim, wat die grootste getal persone per gesin het van die dorpe wat vermeld is, Knysna, George, Oudtshoorn, Lichtenburg, en Swellendam. Christiana het die laagste gesinsinkomste maar hier is die gesin nie baie groot nie, hoewel heelwat bo die gemiddelde. Daar is natuurlik uitsonderings op die reël. In sowel Riversdal as Graaff-Reinet, byvoorbeeld, is gemiddelde gesinsinkomste betreklik laag en gesinne ook groter as wat mens sou verwag. In Barberton en Mafeking is gesinsinkomste weer betreklik groot en die gesin ook groter as wat mens sou verwag. Hierdie uitsonderings is moontlik die gevolg van bepaalde plaaslike toestande.

14. Plattelandse gesinne: Verhouding tot stedelike.—Plattelandse gesinne staan in die volgende verhoudings (persent) tot alle gesinne:

Provinsie.	Verhouding (persent) plattelandse gesinne.	Persentasie van bevolking wat in plattelandse gebiede woon. Sensus 1941.
Kaapprovinsie.....	34·2	32·8
Natal.....	19·7	18·4
Transvaal.....	26·1	27·2
Oranje-Vrystaat.....	57·2	51·2
UNIE.....	31·2	30·6

Amper een-derde van die gesinne is in plattelandse gebiede *opgeneem*; en hoewel sekere gesinne wat gewoonlik in stedelike gebiede woon in plattelandse gebiede opgeneem is en omgekeer, is bestaande verhouding waarskynlik juis vir die persentasie gesinne wat in plattelandse distrikte *woon*. Die verskille tussen die provinsies is baie opmerklik. In Natal is die plattelandse verhouding slegs een-vyfde, in Transvaal ongeveer een-kwart, in die Kaapprovinsie een-derde en in Oranje-Vrystaat meer as die helfte. Hierdie verskille is hoofsaaklik toe te skryf aan plaaslike provinsiale toestande wat die bevolkingstotale bepaal.

15. Bron van Inkomste: Plattelandse gesinne.—Tabel 12 toon die verspreiding van plattelandse gesinne volgens bron van inkomste, sowel van boerdery as van ander ondernemings. Die volgende persentasies is uit dié tabel:

Provinsie.	Plattelandse gesinne: Persentasie wat boer.
Eintlike Kaapprovinsie.....	73·8
Transvaal.....	32·4
Eintlike Natal.....	53·5
Zululand.....	43·2
Transvaal.....	62·8
Oranje-Vrystaat.....	80·8
UNIE.....	69·1

As hierdie syfers saam met dié van die voorgaande paragraaf geneem word, toon hulle dat:

(i) die Oranje-Vrystaat nie alleen die grootste persentasie gesinne wat in plattelandse gebiede woon, het nie, maar dat 'n groter persentasie van die plattelandse gesinne by boerdery betrokke is as in enige ander provinsie.

(ii) Natal die kleinste verhouding van gesinne het wat in plattelandse gebiede woon en ook dat die kleinste persentasie van dié plattelandse gesinne by boerdery betrokke is.

Gesinne wat boerdery as hulle vernaamste bron van inkomste het, met inbegrip van dié wat in stedelike gebiede woon, is as volg in die provinsies versprei:

Kaapprovinsie.....	43 persent.
Natal.....	5 persent.
Transvaal.....	33 persent.
Oranje-Vrystaat.....	19 persent.
Unie.....	100 persent.

As hierdie syfer met die produktiewe boerderygebiede van die provinsies vergelyk word, blyk dit dat die Vrystaat die digste met boeregesinne bevolk is en dat die Kaapprovinsie die minste het. Daar moet egter op gelet word dat bestaande gevolgtrekkings op *blanke* gesinne alleen gebaseer is.

16. Plattelandse gesinne, nie boere nie: Algemeen.—Die verhouding van plattelandse gesinne wat nie boer nie, verskil aannmerklik in elke distrik. In distrikte waarin daar 'n stad of groot dorp is, is die persentasie gewoonlik hoog aangesien baie gesinne buite die munisipale grense woon maar hulle inkomste uit bedrywighede binne die stad of dorp verkry. Op ander plekke is die persentasie gesinne wat nie boer nie weer hoog as gevolg van die groot getalle persone wat betrokke is by mynontginning (Pelgrimsrust), spoedelwerye (Barkly-Wes), konstruksie en instandhouding van paatre en spoorweë (Cathcart, Victoria-Wes), bosbou (Knysna), of vissery, ens. Die volgende distrikte kan genoem word omdat hulle besonder hoë verhoudings het vir gesinne wat nie boer nie. Die syfers wat op die name volg, is persentasies.

Kaapprovinsie... Knysna, 72; Cathcart, 61; George, 40; Humansdorp, 41; Stutterheim, 44; Victoria-Wes, 41; Taung, 37; Barkly-Wes, 37; De Aar, 33; Piketberg, 34.

Natal..... Die verhouding van gesinne wat nie boer nie is hoog in al die distrikte.

Transvaal..... Pelgrimsrust, 88; Barberton, 74; Nelspruit, 52; Bloemhof, 52; Carolina, 48; Christiana, 40.

Oranje-Vrystaat.. Ventersburg, 30; Thaba 'Nchu 29.

17. Plattelandse streke.—Boerderytoestande varieer aansienlik in elkeen van die vier provinsies van die Unie en daar is dikwels groot verskill tussen aangrensende distrikte. Onder hierdie omstandighede is provinsiale totale en gemiddeldes betreffende een of ander kenmerk nie van veel waarde nie en kan hulle selfs misleidend wees. Om hierdie rede is dit verkeerslik om die distrikte van elke provinsie in min of meer gelykoortige streke te groeper. Hierdie groeping is noodwendig willekeurig maar aandag is, sover doenlik, aan die gesetstelpeile en die tipes grondbesit gegee. Die getal streke in elke provinsie is die volgende: Kaap, 24; Natal, 10; Transvaal, 16; Oranje-Vrystaat, 10. Partymaal, soos byvoorbeeld in die geval van Brits, verskil 'n distrik so baie van die aangrensende distrikte dat dit raadsaam geag is om so 'n distrik as 'n streek op sigself te behandel. Die groeping wat aangewend is, word in aanhangsel B getoon.

Die eerste twee streke is by uitstek die koringgebiede van die suid-westelike Kaapprovinsie en die laaste twee grens aan die Betsjoeanaland-Protektoraat heel in die noorde.

Daar sal opgemerk word dat die gebiede met die hoogste persentasie eienaargesinne in die uiterste deel van die suid-weste en in die ooste en noord-ooste geleë is. Hierdie gebiede is ook toevallig die streke waar die prys van grond heelwat bo die gemiddelde is.

Op die ander uiterste is die volgende vier streke waar die persentasies eienaargesinne kleiner as 45 persent is.

Streek no.	Persentasie eienaargesinne.	Distrikte.
3	41	Bellville, Hopefield, Malmesbury, Piketberg, Tulbagh.
4	41	Bredasdorp, Caledon.
17	29	Gordonia.
18	43	Kuruman, Mafeking, Taung, Vryburg.

Die eerste twee streke is by uitstek die koringgebiede van die suid-westelike Kaapprovinsie en die laaste twee grens aan die Betsjoeanaland-Protektoraat heel in die noorde.

In die drie Atlantiese kusdistrikte Malmesbury, Hopefield en Piketberg en die Karroodistrik Graaff-Reinet, kom *werknekmergesinne* relatief die meeste voor. In elkeen van hierdie distrikte vorm dié gesinne ongeveer een-derde van die totaal.

Bywonergesinne vorm ongeveer een-derde in elkeen van die volgende distrikte wat almal op of naby die suidkus geleë is: Caledon, Swellendam, Heidelberg, Riversdal, Calitzdorp, Oudtshoorn en Uniondale.

Huurdergesinne kom verreweg die meeste voor in die groot distrikte in die noorde en noord-weste. Die streke wat hoofsaaklik betrokke is, is nommers 13, 14, 16, 17 en 18. Hulle streke van Piketberg en Sutherland in die suide tot aan die Betsjoeanalandgrens. Algemeen gesproke, oortref die persentasie huurdergesinne een-derde in al hierdie distrikte en dit vermeerder hoe verder mens noordwaarts gaan. In Taung is die verhouding ongeveer drie-kwart en in Gordonia twee-derdes. In baie gevalle is die eienaars van wie die grond gehuur word waarskynlik elderswoneend. Die hoë persentasie huurdergesinne in die noord-oostelike distrikte Molteno, Wodehouse (Dordrecht), Elliot en Maclear, moet ook vermeld word. In elkeen van hierdie distrikte is die verhouding ongeveer een-derde.

21. Klas van grondbesittende gesin: Natal.—Die 5,044 boeregesinne wat in Natal opgeneem is, is as volg versprei:

Eienaars, 68 persent; Huurders, 15 persent; Bywoners, 8 persent; Werknekmers, 9 persent. Die verhoudings vir eienaargesinne was besonder hoog in die volgende streke:

Streek no.	Persentasie eienaargesinne.	Distrikte.
5	75	Camperdown, Impendhle, Ixopo, Lions River, Polela, Richmond, Underberg.
6	77	Kranskop, Nu-Hanover, Richmond.
8	78	Estcourt, Weenen.

Hierdie streke is feitlik nitsluitlik in die middelveld geleë.

Werknekmergesinne is slegs in twee streke van numeriese belang nl. die noordelike kusdistrikte van Inanda en Laer Tugela en in die naburige Zululandgebied.

Huurdergesinne kom betreklik baie voor in die laer Hoëveld, streek no. 7, en in die laer middelveld, streek no. 5.

Bywonergesinne word feitlik uitsluitlik tot die noordelike hoëveld beperk.

22. Klas van grondbesittende gesin: Transvaal.—Die 33,873 boeregesinne wat in Transvaal opgeneem is, is as volg versprei:

Eienaars, 53·9 persent; huurders, 24·9 persent; bywoners, 17·7 persent; werknekmers, 3·5 persent. Die persentasie eienaargesinne is heelwat bo die gemiddelde

Algemeen gesproke, kom bywonergesinne betreklik baie voor in die suidelike sone wat van Standerton en Heidelberg tot aan Lichtenburg strek. Huurdergesinne is weer van groter numeriese belang in die sentrale gebiede van Middelburg tot Rustenburg en Marico; dit is veral op Middelburg en Brits van toepassing. Nelspruit, waar werkemergesinne ongeveer een-kwart van die totaal vorm, is die enigste distrik waar hulle van relatiewe belang is.

23. Klas van grondbesittende gesin : Oranje-Vrystaat.—Die 19,958 boeregesinne wat opgename is, is as volg versprei:

Eenaar, 59·6 persent; huurder 14·0 persent; bywoner, 23·7 persent; werkneuter, 2·7 persent. Wat die verhouding van eenaars betref, volg hierdie provinsie op Natal. Dit het die grootste persentasie bywonergesinne en die laagste persentasies huurders en werkneuters. Eenaargesinne kom, betreklik gesproke, die meeste voor in die suidelike en suid-weselike distrikte Bloemfontein, Edenburg, Reddersburg, Trompsburg, Phillipolis en Fauresmith.

Bothaville het die grootste persentasie bywoners (40 persent). Hierdie klas gesin kom ook veral baie voor in die heel noordelike distrikte Vrededorf, Heilbron en Frankfort en in die aangrensende distrikte in die suide nl. Kroonstad, Lindley en Senekal. Dit is interessant om te onthou dat bywonergesinne ook baie voorkom in die aangrensende distrikte van Suid-Transvaal.

Die hoogste persentasies huurdergesinne kom voor in die suid-oostelike distrikte Rouxville en Smithfield en die noord-oostelike distrikte Bethlehem en Harrismith. Hier onthou ons weer dat huurdergesinne veral baie voorkom in die aangrensende distrikte van die Natalse hoëveld (laer) en die noord-oostelike Kaapprovinsie.

Werkemergesinne is nêrens van numeriese belang nie.

24. Inkomste van boeregesinne : Unie.—Tabel 13 toon die verspreiding van plattelandse boeregesinne volgens inkomste en klas van gesin. Die proporsionele distribusies vir alle gesinne gesamentlik is die volgende:

PESENTASIE GESINNE.

Inkomste.	Kaap.	Natal.	Transvaal.	O.V.S.	Unie.
Onder £50.....	20·0	10·5	31·9	17·3	22·9
£50-£99.....	22·0	11·3	23·9	25·4	22·8
£100-£149.....	13·4	10·5	13·6	13·9	13·4
£150-£199.....	8·7	10·0	8·6	9·0	8·8
£200+.....	35·9	57·7	22·0	34·4	32·1
TOTAAL, %....	100·0	100·0	100·0	100·0	100·0
No.....	43,057	5,044	33,873	19,958	101,932
Mediaan.....£	130	Bo 200	88	126	116

Van al die plattelandse boeregesinne wat in die Unie opgeneem is, het 32 persent of amper een-derde inkomste gehad wat £200 oortref en 46 persent het inkomste van minder as £100 gehad. Die mediaaninkomste was £116, dit wil sê, die een helfte van die gesinne het inkomste gehad wat hierdie som oortref en die ander helfde het minder as dié bedrag gehad. Die distribusie wat hierbo getoon word, suggerer dat gesinne in Natal die hoogste inkomste gehad het; die Kaap en Oranje-Vrystaat is die volgende met baie min verskil tussen hulle; dit lyk egter asof die Kaap tweede kom en Oranje-Vrystaat derde. Gesinsinkomste is in Transvaal bepaald laer as in enige ander provinsie.

Ons het gesien (paragraaf 19, tabel 13) dat die numeriese verhouding tussen die verskillende klasse van gesinne aansienlik varieer in die verskillende provinsies. Tabel 13 toon ook dat daar baie veelseggende verskille tussen die inkomstediistribusies van die verskillende klasse van gesinne in dieselfde provinsie is. Onder hierdie omstandighede sou 'n meer vertroubare klassifikasie van die provinsies verky word as soortgelyke klasse van gesinne vergelyk word. As die verskillende kenmerke van die inkomstediistribusies in aanmerking geneem word, dit wil sê, die mediane en die persentasies gesinne met inkomste van meer as £200 of minder as £100, sal ons die volgende klassifikasies kry. (K staan hier vir Kaapprovinsie, N vir Natal, T vir Transvaal en O vir Oranje-Vrystaat).

Klas van gesin.	KLASSIFIKASIE VAN INKOMSTE.			
	1ste.	2de.	3de.	4de.
Eenaar.....	N.	O.	O.	T.
Huurder.....	N.	K.	T.	O.
Bywoner.....	N.	N.	O.	T.
Werkneuter.....	N.	T.	O.	K.

As die klassifikasie slegs op eenaargesinne gebaseer is, kry ons die volgende volgorde wat waarskynlik die betrouwbaarste is: Natal, Kaap, Oranje-Vrystaat, Transvaal. Dit is presies dieselfde as die volgorde wat hierbo gevind is deur die klassifikasie van alle gesinne afgesien van klas. Gesinne in Natal skyn die hoogste inkomste in alle klasse, behalwe bywoners, te hé; daar is egter betreklik min sulke gesinne in Natal en die klassifikasie is nie heeltemaal betrouwbaar nie. Gesinne in die Kaap het weer hoér inkomste as dié in Transvaal of Oranje-Vrystaat, behalwe in die geval van werkemergesinne wat hoog geklassifiseer is in Transvaal maar laag in die Kaapprovinsie.

As die vier verskillende klasse van gesinne in elke provinsie volgens inkomste geklassifiseer word, vind ons dat die eenaargesinne sonder uitsondering die hoogste inkomste het en die bywonergesinne die laagste. In Natal en Transvaal het werkemergesinne hoér inkomste as huurdergesinne maar in die Kaap en Oranje-Vrystaat is dit die teenoorgestelde geval. Hierdie verskille kan miskien aan die aard van die werkneuter toegeeskryf word—of hy slegs 'n plaasarbeider en of hy 'n voorman is.

25. Inkomste van plattelandse boeregesinne : Kaapse streke.—Die beste metode om gesinsinkomste in verskillende streke te vergelyk, is miskien om die vergelyking alleen op eenaargesinne te baseer.

In die Kaapprovinsie was daar agt streke waarin drie-kwart van die eenaargesinne of meer inkomste bo £200 gehad het. Hulle was die volgende:

Streek no.	Percentasie eenaargesinne bo £200.	Distrikte.
21	94	Galesburg, De Aar, Hanover, Phillipstown, Richmond.
2	84	Paarl, Somers-Wes, Stellenbosch, Wellington.
15	83	Britstown, Hopetown, Victoria-Wes.
20	82	Graaff-Reinet, Middelburg, Pearson.
19	81	Adelaide, Bedford, Cradock, Marsburg, Somerset-Oos, Steynsburg, Tarka, Venterstad.
12	79	Aberdeen, Beaufort-Wes, Murrayburg.
5	79	Montagu, Robertson, Worcester.
3	75	Bellville, Hopefield, Malmesbury, Pikitberg, Tulbagh.

Volgens hierdie syfers blyk dit dat inkomste in die sentrale, oosteelike en noordelike Karoo die hoogste is—behalwe 'n paar distrikte in die suid-weselike Kaapprovinsie. Inkomste is ongeveer op dieselfde peil in al die distrikte van 'n bepaalde streek met die volgende paar uitsonderings. In Hopetown is inkomste beslis laer as in die ander twee distrikte van streek no 15; in Pearson is dit laer as in Graaff-Reinet of Middelburg; in Maraisburg is dit laer as in die omliggende distrikte van streek no. 19; en in Pikitberg is dit laer as in Hopetown of Malmesbury.

In die volgende sewe streke het minder as 40 persent van die eenaargesinne inkomste bo £200 gehad:

Streek no.	Percentasie eenaargesinne bo £200.	Distrikte.
6	39	Heidelberg, Riversdal, Swellendam.
16	38	Barkly-Wes, Herbert, Kimberley.
1	37	Kaap, Simonstad, Wynberg.
7	34	Calitzdorp, Ladismith, Oudtshoorn, Uniondale.
17	29	Gordonia.
18	28	Kuruman, Mafeking, Taung, Vryburg.
8	22	George, Knysna, Mosselbaai.

Bogenoemde streke van lae inkomste word in twee taamlik duidelik afgebakende soes verdeel: die eerste op die suidkus en die aangrensende distrikte van die suid-Karoo; en die tweede heel in die noorde. Die laagste inkomste is in die heel noordelike distrik van Mafeking opgeteken, waar slegs 15 persent van die gesinne inkomste bo £200 gehad het, en in die suidelike kusdistrik Knysna waar die ooreenstemmende verhouding slegs 13·4 persent was. Dit is ook van belang om op te merk dat inkomste in Vryburg, die aangrensende distrik van Mafeking, op 'n baie hoér peil was.

26. Inkomste van plattelandse boeregesinne : Natalse streke.—Gesinsinkomste is bepaald die hoogste in die noordelike kussoone van Inanda tot Laer Umfolozhi—die suikergebied. In die sentrale gebied, wat gewoonlik die middelvelde genoem word, is inkomste effens laer en in die hoëveld heel in die noorde is dit die laagste. In die distrik Vryheid blyk gesinsinkomste die laagste te wees; hier het slegs 36 persent van die gesinne inkomste bo £200, terwyl die ooreenstemmende verhouding vir die omliggende distrikte ongeveer een-helfte is.

27. Inkomste van plattelandse boeregesinne : Transvaalse streke.—Die inkomste van eenaargesinne is in die volgende streke die hoogste:

Streek no.	Percentasie eenaargesinne bo £200.	Distrikte.
6	60	Barberton, Nelspruit.
9	52	Letaba, Pilgrimsrust.
4	51	Bethal, Standerton, Ermelo.
5	48	Volksrust, Piet Retief, Wakkerstroom.

Al hierdie distrikte is in die oostelike en suid-oostelike gedeelte van die provinsie geleë. Barberton het betreklik min boeregesinne sonder uitsondering die hoogste inkomste het en die bywonergesinne (paragraaf 16) maar inkomste blyk daar hoér te wees as op ander plekke. Ermelo en Letaba is ook belangrike distrikte.

In die volgende streke was gesinsinkomste oor die algemeen die hoogste:

Streek no.	Percentasie eenaargesinne bo £200.	Distrikte.
16	23	Bloemhof, Christiana.
15	22	Schweizer-Reneke, Wolmaransstad.
11	21	Potgietersrust, Waterberg.
10	21	Pietersburg, Zoutpansberg.
13	19	Marico, Pretoria, Rustenburg.

Al hierdie distrikte, behalwe Pretoria, is in die westelike of noordelike deel van die provinsie geleë. Wat die suid-weselike streke (15, 16) betref, blyk inkomste veelseggend laer te wees in Wolmaransstad en Bloemhof as in die ander distrikte. Die laagste inkomste is in Marico en Waterberg opgeteken; in laasgenoemde distrik het 17 persent van die eenaargesinne verklaar dat hulle inkomste bo £200 is en in Marico slegs 14 persent. Dit is interessant om op te merk dat:

(i) inkomste in Rustenburg, wat tussen Marico en Waterberg lê, veelseggend hoér is;

(ii) inkomste in die midde-weselike distrikte Lichtenburg en Ventersdorp hoér is as in die suid-weselike of noord-weselike;

(iii) Marico, die distrik met die laagste inkomste, aan Mafeking grens waar, soos ons gesien het, inkomste besonder laag is.

In Pietersburg is inkomste aansienlik laer as in enige van die omliggende distrikte.

Spesiale melding moet van huurdergesinne gemaak word. Hulle is van groot numeriese belang in die weste en in party sentrale distrikte, veral Brits, Pretoria en Middelburg. In die meeste van hierdie distrikte is gesinsinkomste baie laag en daar is nouliks enige gebied waarin meer as 12 persent van die gesinne inkomste bo £200 het; in Middelburg is die verhouding slegs 7·9 persent en in Waterberg 5·2 persent. In Brits is die toestand egter baie anders; hier is daar meer huurder- as eenaargesinne en 40 persent van eersgenoemde het inkomste bo £200 terwyl die verhouding vir laasgenoemde 43 persent is. Hierdie distrik is enig in dié opsig dat huurder- en eenaargesinne, wat inkomste betref, op min of meer dieselfde peil staan.

28. Inkomste van plattelandse boeregesinne : Vrystaatse streke.—Die hoogste gesinsinkomste is in die volgende streke opgeteken:

Streek no.	Percentasie eenaargesinne bo £200.	Distrikte.
6	70	Bethulie, Dewetsdorp, Trompsburg, Smithfield.
7	65	Rouxville, Wepener, Zastron.
1	65	Clocolan, Ficksburg, Fouriesburg, Ladybrand, Thaba 'Nchu.

Al hierdie distrikte is in die midde-oostelike en suid-oostelike deel van die provinsie geleë. Die syfers skep die indruk dat inkomste daal in 'n noord-oost

Transvaalse streek no. 3, wat die distrikte Heidelberg, Nigel, Springs en Vereeniging insluit, vind ons dus dat die prys van grond baie hoër is as wat ons van die gesinsinkomste sou verwag. Hieruit kan afgelei word dat die prys nie die werklike landbouwaarde van die grond in hierdie streek weerspieël nie. Trouens, dit is bekend dat die prys van plattelandse grond in hierdie streek kunsmatig baie opgedryf is deur 'n groot aantal transports van bou- en industriële terreine. Dieselfde toestand is in die geval van streek no. 8 (Knysna, George en Mosselbaai) in die Kaap, en in verskeie ander gevind

31. Plattelandse gesinne, nie boere nie.—Dit is 'n uiters ongelyksoortige groep wat onder ander bestaan uit omstedelike gesinne wat hulle inkomste uit beroepe wat in die stede en dorpe gevvolg word, verkry; uit gesinne wat betrokke is by handel, mynontginning en spoeldiamantdelwery; konstruksie en instandhouding van paaie en spoorweë; bosbou en vissery, ens. Daar is nie verskil gemaak tussen industriële bedrywighede nie en daar sal geen poging tot 'n uitvoerige opname aangewend word nie. Wat grootte van gesin en inkomstpeil betref, val hierdie groep tussen die stedelike gesinne en die plattelandse boeregesinne. In tabel 19 word uitvoerige verspreidings volgens grootte en inkomste van gesin gegee, en sekere ander inligting in tabelle 2 en 3.

32. Alleenwonende persone sonder gesin.—Tabelle 21-23 bevat inligting met betrekking tot persone wat van hulle gesinne geskei is en op hulle eie woon, vermoedelik grotendeels in hotelle, losieshuise, ens. Daar moet veral opgemerk word dat 46,610 persone wat huisgesinne vorm, by die totaal van 149,742 ingesluit word (sien paragraaf 2 en tabel 1). Soos verwag sou word, word die meerderheid van hierdie persone wat op hulle eie woon, in die vernaamste stedelike gebiede gevind. Uit die 51,276 persone wat in Transvaal opgeneem is, was twee-derdes dus in Johannesburg en Pretoria ; en uit die 16,655 wat in Natal opgeneem is, was twee-derdes in Durban ; op dieselfde wyse is 59 persent van die Kaapse totaal in Kaapstad, Port Elizabeth, Oos-Londen en Kimberley opgeneem.

In stedelike gebiede is dames wat alleen woon, oorheersend in al die provinsies behalwe Natal; in plattelandse gebiede is dit die teenoorgestelde geval aangesien mans in die meerderheid is.

As die inkomste, wat oor die algemeen baie laag is, oorweeg word, moet daar onthou word dat baie van hierdie persone op ouderdoms-en ander pensioene of van ontvangste van kosgangers en looseerdeurs bestaan ; ander, veral in stedelike gebiede, is weer jonk en het maar slegs vir 'n paar jaar gewerk en in baie gevalle minder as 'n volle jaar.

VERTROULIK.

xix

UNIE VAN SUID-AFRIKA.

SENSUS, 6 MEI 1941.

FORM VIR GESIN EN INKOMSTE (moet aan Vorm C. 1 geheg word).

{	Huwelikstaat (<i>Nooit getroud, getroud, in wedustaat, geskei</i>)
	Beroep in normale burgerlike lewe
	Indien op militêre diens, skryf „M.”

4. Getal persone in GESIN (soos in 1 hierbo aangedui) wat inkomste verdien of ontvang

5. **TOTALE GESAMENTLIKE INKOMSTE** VAN DIE GESINSHOOF EN AL DIE ANDER LEDE VAN DIE **GESIN** (SOOS IN 1 HIERBO AANGEDUI) WAT GEDURENDE 12 MAANDE (1 MEI 1940 TOT 30 APRIL 1941) UIT ALLE BRONNE ONTVANG IS:—

Vul óf A óf B in, nie albei nie. (Lees Opmerking No. 5.)

A. Vir persone wat
NIE IN BOERDERYBEROEPE
BETROKKE IS NIE.

Inkomstegroep.
Geen inkomste.....
Onder £50.....
£50 tot £99.....
£100 tot £149.....
£150 tot £199.....
£200 tot £249.....
£250 tot £299.....
£300 tot £349.....
£350 tot £399.....
£400 en daarboven.....

Moenie die werklike bedrag van die inkomste opgee nie;
merk net die inkomstegroep met 'n X.

B.		Vir persone betrokke in BOERDERY-ONDERNEMINGS.	
(Indien u boer, maak 'n X in die betrokke vakkies.)			
Plaas :		Woning :	
Eienaar.....		Eiendom.....	
Huurder.....		Vry.....	
Bywoner.....		Gehuur.....	
Werknemer..			

Kweek of ontvang die gesin plaasprodukte vir eie gebruik?

Ja.....	
Nee.....	

Gesamentlike *bruto inkomste* van hele gesin (soos in 1 hierbo aangetoon) uit alle bronne: produkte, lone, ens.; bereken in geld.

Geen geldinkomste.....	
Onder £50.....	
£50 tot £99.....	
£100 tot £149.....	
£150 tot £199.....	
£200 en daarboven.....	

Moenie die werklike bedrag van die inkomste opgee nie; merk net die inkomstegroep met 'n X
