BLANKES, KLEURLINGE EN ASIATE

POPULATION CENSUS, 1960

SAMPLE TABULATION

NO. 3 - MAJOR OCCUPATIONAL GROUPS.

WHITES, COLOUREDS AND ASIATICS

VOORWOORD.

Hierdie verslag is die derde, wat in die reeks verslae oor die steekproeftabellasië van die 1960-Bevolkingsensus gepubliseer sal word en toon besonderhede van die beroepsindeling van die Blanke, Kleurling- en Asiatiese bevolking. Die twee verslae wat reeds gepubliseer is, bevat gegewens van (a) NYWERHEIDSAFDELINGS, (b) OUDERDOMSGROEPE en (c) HUISTALE, as volg:-

Verslag No. 1 - Blankes.

Verslag No. 2 - Kleurlinge en Asië.

Ooreenstemmende statistieke vir Bantoes asook ander bevolkingseienskappe vir die verskillende rasse sal mettertyd gepubliseer word.

Hierdie verslag (No. 3) is in drie dele ingedeel, naamlik:- Deel I vir Blankes; Deel II vir Kleurlinge en Deel III vir Asië, en die ooreenstemmende tabelle in elke deel het dieselfde tabelnommers.

Die tabelle toon besonderhede van nege hoofberoepsgroepe, maar Tabel 1.1 gee vir slegs die Republiek en provinsies, n meer gedetailleerde klassifikasie van beroepsgroepe.

Die besonderhede vir Kleurlinge en Asië is egter nie vir elke ekonomiese streek afsonderlik aangegee nie, omdat die syfers vir sommige streke onbeduidend is. In hierdie gevalle is die gedetailleerde syfers vir verskillende streke saamgetel en in een tabel getoon, maar die totale bevolking vir elke streek is onderaan die tabel gegee. Totale bevolkingsyfers vir elke streek volgens die bevolkingsensusse van 1951 en 1936 word ook aangegee.

Die syfers vir die totale Blanke, Kleurling- en Asiatiese bevolking van elke streek volgens geslag, stedelik en plattelands, is werklike syfers wat uit die volledige sensus verkry is. Die steekproefsyfers vir die verskillende eienskappe is egter verhoudingsgewys aangepas om met die werklike syfers ooreen te kom.

PRETORIA.
OKTOBER 1962.

H.M. STOKER.
DIREKTEUR VAN SENSUS EN STATISTIEK.

PREFACE.

This report is the third in the series to be published on the sample tabulation of the 1960 population census, and shows details of the occupational distribution of the White, Coloured and Asiatic populations. The two reports already published show particulars of (a) INDUSTRY DIVISIONS, (b) AGE GROUPS and (c) HOME LANGUAGES, as follows:-

Report No. 1 - Whites.

Report No. 2 - Coloureds and Asiatics.

Corresponding statistics for Bantu, and also other characteristics for the various races, will be published from time to time.

This report (No. 3) is divided into three parts namely:- Part I for Whites; Part II for Coloureds and Part III for Asiatics, and the corresponding tables in each part have been given the same table number.

The tables show particulars for nine major occupational groups, but Table 1.1 shows, for the Republic and provinces only, a more detailed classification of occupational groups.

Particulars for Coloureds and Asiatics have not been given for every region as the population of many of the regions is very small. In these cases the detailed figures for several regions have been combined into one table, but the total population figures for each region are given at the foot of the table. Total population figures for each region according to the censuses of 1951 and 1936 are also given.

The figures for the total White, Coloured and Asiatic populations of each region according to sex, urban and rural, are the actual census figures obtained from the complete census. The sample tabulation figures for the various characteristics have been proportionally adjusted to agree with the actual figures.

PRETORIA.
OCTOBER, 1962.

H.M. STOKER.
DIRECTOR OF CENSUS AND STATISTICS.

DIE STEEKPROEF.

- (i) Inleiding: 'n Sistematiese steekproef met ewekansige beginpunte, bestaande uit tien persent van die Blanke, Kleurling- en Asiaat- en vyf persent van die Bantoebevolking, is uit die sensusopgawes vir tabellering gekies. In gevalle waar gesinne of persone op enkelvorms (bestaande hoofsaaklik uit huishoudings of gesinne, vorm B.1 en B.2) opgeneem is, is elke tiende of twintigste vorm gekies; terwyl in alle ander gevalle, bv. waar enkelpersone in inrigtings in boeke opgeneem is, elke tiende of twintigste persoon geskies is.
- (ii) Toets van steekproef: Op grond van beskikbare gegewens uit die volledige sensus verkry, is die steekproef ten opsigte van elke ras vir elke opnemersdistrik, asook ten opsigte van ras en geslag vir elke landdrosdistrik getoets. Daar is ongeveer 16,000 opnemersdistrikte wat 280 landdrosdistrikte omvat. Die toetse het getoon dat die resultate uit die steekproef verkry, betreffende ras en geslag, soos verwag, binne die verwagte betroubaarheidsgrense geval het.
- (iii) Steekproeffoute: By resultate uit steekproewe verkry, moet toegelaat word vir moontlike foute wat voortspruit uit die feit dat die eienskappe of waardes wat op die geheel betrekking het, beraam word uit 'n gedeelte van die geheel (in die geval van hierdie verslag, 'n steekproef van 10 persent). Die waardes of eienskappe wat beraam word, varieer tussen individue en hierdie variasie is 'n bron van foute in die beraamde waardes uit die steekproef. By ewekansige steekproefneming is dit moontlik om die foute wat uit hierdie bron verwag kan word, te bereken en om die grense te bepaal waarbinne die bevolkingswaardes sal val, met 'n gegewe waarskynlikheid. Dit is duidelik dat hoe kleiner die steekproef is, hoe groter die foute sal wees en ook dat die foute verband hou met die variabiliteit van die waardes of eienskappe wat hier beskou word. Die resultate verkry van klein steekproewe ten opsigte van hoogsveranderlike waardes of eienskappe wat 'n klein proporsie van die geheel uitmaak, sal groot steekproeffoute toon (kyk na voorbeelde om die gebruik van die tabel van steekproeffoute te illustreer).
- (iv) Steekproeffoute vir verskillende verhoudings en steekproefgroottes: In Tabel O.O word die steekproeffoute vir verskillende steekproefgroottes en vir verskeie proporsies van die bevolking, vir sekere eienskappe gegee. Hierdie steekproeffoute kan met 95 persent betroubaarheid gebruik word, dit wil sê in 95 gevalle uit 100 sal die foute nie groter wees as dié wat in die tabel aangegee word nie. Die betroubaarheidswaarskynlikheid kan tot ongeveer 99½ persent verhoog word deur die steekproeffoute met 50 persent te vermeerder. Die steekproeffoute sal nie streng van toepassing wees op die soort steekproef waarop die resultate in hierdie verslag gebaseer is nie, dit wil sê 'n sistematiese steekproef van vorms (gesinne of huishoudings) uit die bevolking, of op klein steekproewe en klein proporsies, maar word as bevredigende benaderings beskou wat vir meeste praktiese doeleindes gebruik kan word.
- (v) Voorbeeld om gebruik van Tabel O.O te verduidelik: Gevra om die steekproeffoute van die getal stedelike Blanke vroulikes in die hoofberoepsgroep: Klerklike werkers, in streek 40 (30,864 in die tabel hieronder) te vind en die grense waarbinne die juiste waarde, met 95 persent betroubaarheid, sal val.
- Tabel 1.3 (Deel I) toon die volgende:-

Streek 40. Hoofberoepsgroepe.	Stedelik Vroulikes.	
	Getal	(Persent)
Professioneel, tegnies	8,518	(4)
Administratief, uitvoerend	983	(1)
Klerklike werker	30,864	(15)
Verkoopswerker	6,465	(3)
Boer, visser	71	-
Myner, steengroefwerker	50	-
Vervoerwerker	1,104	(1)
Ambagsman, produksiewerker	4,913	(2)
Dienswerker	2,695	(1)
Geen beroep vermeld	1,042	(1)
Totaal ekonomies bedrywig	56,705	(28)
Geen winsgewende beroep	<u>147,072</u>	<u>(72)</u>
Totaal	<u>203,777</u>	<u>(100)</u>

^{1/} Die syfers in hierdie kolom is natuurlik beraam uit die steekproef wat basies 1/10de van elk van die bogenoemde syfers uitmaak.

Die syfers van 30,864 vorm 15 persent van die totaal van 203,777. Die steekproeffout getoon in die 15 persent-kolom van die tabel teenoor 'n bevolkingsyfer naaste aan 203,777, dit wil sê 200,000 (verteenwoordigende 'n steekproef van 20,000) is 3.2 persent. Die steekproeffout van die syfer 30,864 is derhalwe ongeveer 3.2 persent van 30,864, dit is 988, en met 95 persent betroubaarheid kan aanvaar word dat die getal stedelike vroulike klerklike werkers in die streek, binne die grense 30,864 ± 988 sal val, dit is tussen 29,876 en 31,852.

Vir die getal vroulikes in hoofberoepsgroep: Dienswerkers in bogenoemde voorbeeld (2,695 vroulikes), wat 'n klein verhouding naamlik 1 persent van die totaal uitmaak, sal die steekproeffout relatief groter wees en die betroubaarheidsgrense heelwat wyer. Die tabel toon dat vir 'n verhouding van 1 persent en 'n totale bevolkingsyfer van 200,000 (verteenwoordigende 'n steekproef van 20,000) die persentasiefoute 13.4 persent is, en derhalwe sal die getal vroulike dienswerkers tussen 2,695 ± 361 wees, dit wil sê tussen 2,334 en 3,056. Insgelyks kan die steekproeffout en betroubaarheidsgrense ten opsigte van enige ander hoofberoepsgroep vir manlikes of vroulikes of vir enige ander streek, provinsie, of die Republiek, uit Tabel O.O bepaal word.

OPMERKINGS OOR TABELLE.

- (i) Ekonomiese streke: Aangesien die bevolking van heelwat landdrosdistrikte klein is, is besluit om gegewens van die steekproef te tabelleer volgens 51 ekonomiese streke soos aangedui op die kaart. Elke streek bestaan uit een of meer landdrosdistrikte. Die ekonomiese streke soos opgestel in samewerking met die Buro vir Sensus en Statistiek is dié gepubliseer deur die Buro vir Marknavorsing van die Universiteit van Suid-Afrika in Marknavorsingsverslag No. 2. Vir die Blankes word die gegewens vir elkeen van die 51 streke getoon. Baie van hierdie streke het egter 'n klein Kleurling- en Asiaatbevolking en in hierdie gevalle is die syfers vir verskillende streke saamgetel. Sommige van die streke het selfs 'n klein Blanke bevolking en selfs vir sommige saamgevoegde streke is die Kleurling- en Asiaatbevolking klein en derhalwe sal die steekproeffout relatief groot wees. Die betrokke syfers vir elke streek of streke is egter nogtans afsonderlik gepubliseer, omdat die waardes ten opsigte van een of meer groepe van 'n eienskap inderdaad moontlik 'n groot verhouding van die totaal vir daardie eienskap uitmaak en terselfdertyd aantoon dat die ander groepe relatief onbelangrik

is. Soos reeds verduidelik, kan die benaderde steekproeffout met behulp van Tabel O.O maklik bepaal word. Dit moet ook herhaal word dat die totale bevolking vir elke streek volgens ras en geslag, stedelik en plattelands, werklike syfers is wat uit die volledige sensus verkry is, en dus nie beraamde syfers is nie.

- (ii) Hoofberoepsgroepe: Behalwe in Tabel 1.1 waar syfers verstrek word vir 'n aantal beroepsgroepe toon die beroepsyfers in hierdie verslag besonderhede volgens nege Hoofberoepsgroepe. Die beroepsklassifikasie wat vir die doel van hierdie verslag gebruik is, is gebaseer op die "International Standard Classification of Occupations" soos deur die Internasionale Arbeidsorganisasie opgestel, met die nodige aanpassings en wysigings vir plaaslike omstandighede. Die basis van die klassifikasie van elke beroep is die aard van die werk verrig. Daar is dus beroepe soos byvoorbeeld klerk, tikster, bestuurder van motorvoertuie, ens. wat bykans in al die verskillende nywerheidsklassifikasies voorkom.

In Tabel 1.0 word benewens die syfers vir 1960 ook gegewens verstrek vir 1951, maar die syfers vir die hoofberoepsgroepe ten opsigte van die twee sensusjare is nie streng vergelykbaar nie as gevolg van verskille in klassifikasie.

Tabel 1.1 gee 'n aanduiding van die beroepsgroepe wat ingesluit is in die hoofberoepsgroepe. Die volgende hoofberoepsgroepe verdien egter verdere verduideliking:-

Administratiewe, Uitvoerende en Besturende Werker: In hierdie hoofberoepsgroep word ingesluit openbare administratiewe beamptes in diens van die Staat, provinsiale administrasies en plaaslike besture sowel as direkteure, bestuurders en werkende eienaars in private ondernemings. Werkende eienaars in die groot- en kleinhandel is egter ingesluit in die hoofberoepsgroep: Verkoopswerker, terwyl boere en plaasbestuurders ingesluit is in die hoofberoepsgroep: Boer, Visser, Houtkapper en Verwante Werker. 'n Noukeurige klassifikasie van hierdie beroepe was nie altyd moontlik nie, omdat die inligting wat op die vorms verstrek is in heelwat gevalle onvoldoende was.

Ambagsman, Produksieproseswerker en Arbeider: Hierdie hoofberoepsgroep sluit geskoolde ambagsmanne en produksiewerkers in, sowel as halfgeskoolde en ongeskoolde produksiewerkers. Vakleerlinge en leerlinge is ook ingesluit.

Diens-, Sport- en Ontspanningswerker: Die hoofberoepsgroep omvat 'n uiteenlopende aantal beroepe ten opsigte van dienswerkers. Dit sluit in polisiebeamptes, gevangenisbeamptes, verkeersinspekteurs; opsigters, skoonmakers van kantoor- en ander geboue; huisbediendes, koks, ens. in private huishoudings sowel as in hotelle, losieshuise, ens; kelners, kroegmanne; haarkappers en ander toilet dienstewerkers; wasserywerkers; lykbesorgers; vermaaklikheids-, ontspannings- en ander sportwerkers.

- (iii) Ekonomies-bedrywige Bevolking: Die syfers wat in hierdie verslag gegee word ten opsigte van die ekonomies-bedrywige bevolking verskil in 'n geringe mate van die ooreenstemmende syfers in Verslae No's. 1 en 2 wat handel oor die nywerheidsafdelings. Die verskil is hoofsaaklik te wyte aan die feit dat sommige besoekers van oorsee ook hulle beroepe op die sensusvorms aangegee het en die beroepe is as sodanig versyfer en dus ingesluit in die beroepsklassifikasie as ekonomies-bedrywig. By die nywerheidsklassifikasie is hulle egter nie ingesluit by die ekonomies-bedrywige groep nie.

'n Verdere verklaring van die verskil is dat 'n aantal persone wie se nywerheidsklassifikasie nie bepaal kon word nie, in Verslae No's 1 en 2 by die nie ekonomies-bedrywige bevolking ingesluit is, maar by die ekonomies-bedrywige bevolking ingesluit is wat betref die klassifikasie volgens beroepe. Die getalle hiervan is egter nie groot nie.

Die ekonomies-bedrywige bevolking omvat werkgewers, werknemers, werkers vir eie rekening en werksoekers.

THE SAMPLE.

- (i) Introduction: A systematic sample with random starting points, consisting of ten per cent of the White, Coloured and Asiatic and five per cent of the Bantu population, was selected from the census schedules for tabulation. In cases where families or persons were enumerated on single forms (essentially comprising the household or family form B.1 and B.2) each tenth or twentieth form was selected, while in all other cases, for example where single persons in institutions were enumerated in books, each tenth or twentieth person was selected.
- (ii) Testing of sample: On the basis of available figures obtained from the complete census, the sample was tested in respect of each race for each enumerator's district as well as in respect of race and sex for each magisterial district. There were about 16,000 enumerator's areas comprising 280 magisterial districts. The tests revealed that the results obtained from the sample tabulation in so far as race and sex were concerned, fell, to the expected extent within the required confidence limits.
- (iii) Sampling errors: In results obtained by means of sampling, allowance has to be made for possible errors arising from the fact that the characteristics or values pertaining to the whole are estimated from a part of the whole (in this case from a sample of 10 per cent). The values of characteristics to be estimated vary between individuals, and this variation is a source of error in the values estimated from the sample. In random sampling, it is possible to calculate the error to be expected from this source and to determine the limits within which the population values will lie, with a given probability. It is clear that the smaller the sample, the larger the error will be; and also that the error is related to the variability of the values or characteristics considered. The results obtained from small samples in respect of highly variable values or characteristics which comprise a small proportion of the total will have large sampling errors (see examples to illustrate use of table of sampling errors).
- (iv) Sampling errors for various proportions and sample sizes: In Table O.O, the sampling errors for various sizes of sample and for different proportions of the population for any particular characteristic, are shown. These sampling errors can be used with a confidence of 95 per cent, that is, in 95 cases out of 100 the errors will not be larger than those shown in the table. The confidence probability can be increased to approximately 99 $\frac{3}{4}$ per cent by increasing the sampling errors by 50 per cent. The sampling errors would not apply very strictly to the type of sample on which the results in this report are based, that is, a systematic sample of clusters (forms or households) of the populations, or to small samples and small proportions, but are considered to be satisfactory approximations which can be used for most practical purposes.
- (v) Example to illustrate use of Table O.O: Required to find the sampling error of the number of urban White females in the major occupational group: Clerical workers, in Region 40 (30,864 in the table below) and the limits within which the true value will lie, with 95 per cent confidence.

Table 1.3 (Part I) shows the following:-

Region 40. Major Occupational Groups.

	Urban Females.	
	Number	(Percentage)
Professional, technical	8,518	(4)
Administrative, executive	983	(1)
Clerical worker	30,864	(15)
Sales worker	6,465	(3)
Farmer, fisherman	71	-
Miner, quarryman	50	-
Transport worker	1,104	(1)
Craftsman, production worker	4,913	(2)
Service worker	2,695	(1)
No occupation stated	1,042	(1)
Total economically active	56,705	(28)
No gainful occupation	<u>147,072</u>	<u>(72)</u>
Total	<u>203,777</u>	<u>(100)</u>

1/ The figures in this column were, of course, estimated from the sample, which is basically 1/10th of each of the above figures.

The figure of 30,864 is 15 per cent of the total of 203,777. The sampling error shown in the 15 per cent column of the table against a population figure nearest to 203,777, that is 200,000 (representing a sample of 20,000) is 3.2 per cent. The sampling error of the figure of 30,864 is, therefore, approximately 3.2 per cent of 30,864 that is 988, and with 95 per cent confidence it can be stated that the number of White female clerical workers in this region, lies between the limits $30,864 \pm 988$, that is between 29,876 and 31,852.

For the number of females in major occupational group: Service workers, in the above example (2,695), which comprises a small proportion namely 1 per cent of the total, the sampling error will be relatively much larger and the confidence limits much wider. The table shows that for a proportion of 1 per cent and a total population figure of 200,000 (representing a sample of 20,000), the percentage error is 13.4 per cent, and, therefore, the number of female service workers lies between $2,695 \pm 361$, that is between 2,334 and 3,056.

In a similar way the sampling errors and confidence limits in respect of any other major occupational group for males or females in any other region, province or the Republic, may be obtained from Table O.O.

NOTES TO TABLES.

- (i) Economic regions: As the population of many magisterial districts is small, it was decided to tabulate information from the sample according to 51 economic regions as indicated on the map. Each region consists of one or more magisterial districts. The regions, as compiled in collaboration with the Bureau of Census and Statistics, are those published by the Bureau of Market Research of the University of South Africa in Research Report No. 2. For the Whites information is shown for each of the 51 regions. However, many of these regions have very small Coloured and Asiatic populations and in these cases several regions have been grouped together. Some of the regions have even a small White population and even some of the grouped regions have small Coloured and Asiatic populations, and the sampling errors will therefore be relatively large. The relevant figures for each region or regions, however, are published separately, because the values in respect of one or more groups of a characteristic may in fact constitute a large proportion of the total for that characteristic, indicating at the same time that other groups are relatively unimportant. As noted earlier, the approximate sampling error can readily be determined by referring to Table O.O. It should be reiterated that the

figures for the total population of each region according to race and sex, urban and rural, are actual figures obtained from the complete census and are therefore not estimates.

- (ii) Major Occupational Groups: Except in Table 1.1. where figures are given for a number of occupational groups, the occupation figures in this report show details according to nine major occupational groups only. The occupational classification used in this report is based on the "International Standard Classification of Occupations" as compiled by the International Labour Organisation with the necessary adaptations and amendments to suit local conditions. The basis of the classification of each occupation is the nature of the work done. Thus there are occupations such as clerk, typist, driver of motor vehicle, etc., which occur in nearly all the different industries.

Table 1.0 shows figures for 1951 as well as for 1960, but the figures for the major occupational groups for the two censuses are not strictly comparable because of differences in classification.

Table 1.1 gives an indication of the occupational groups included in each of the major occupational groups. The following major groups merit further explanation:-

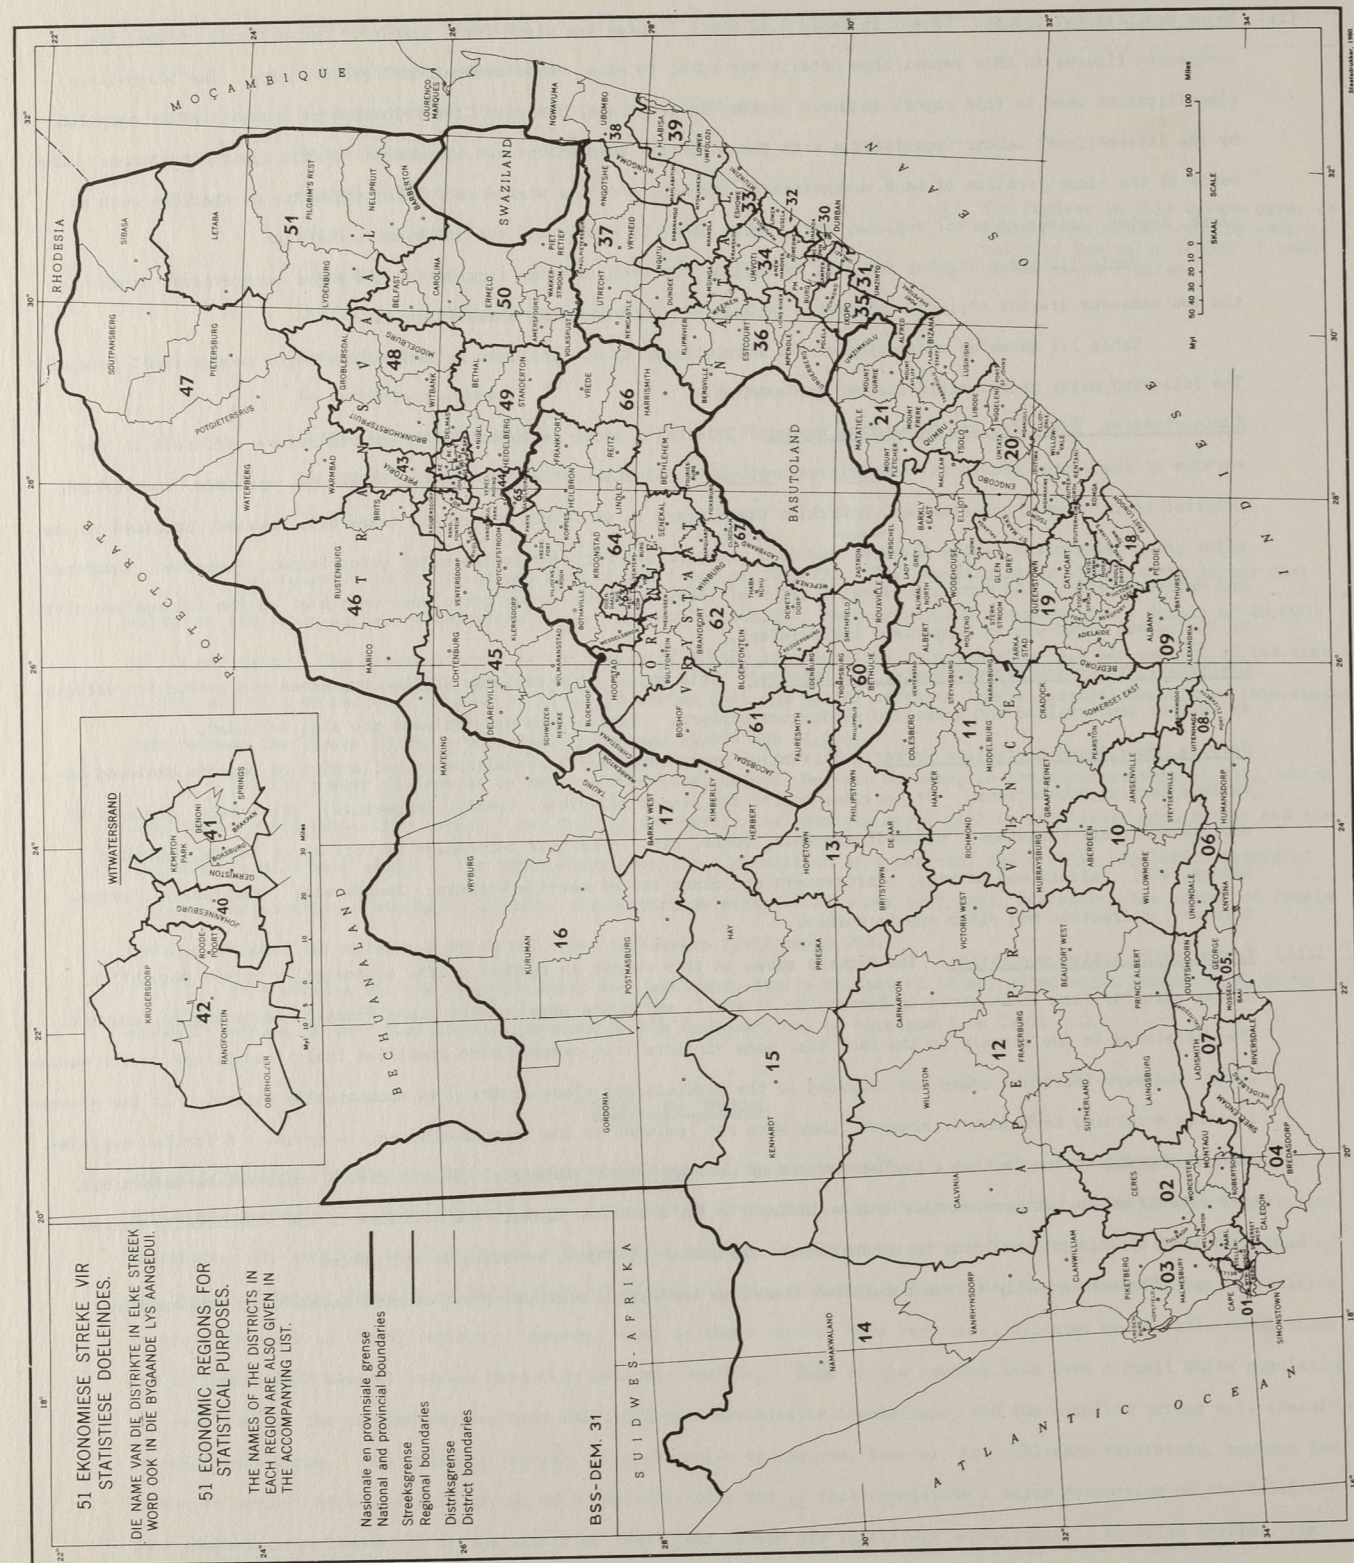

Administrative, Executive and Managerial Worker: This major group includes public administrative officials in the service of the State, provincial administrations, and local authorities, as well as directors, managers, and working proprietors in private undertakings. Working proprietors in wholesale and retail trade are, however, included in the major group Salesworker, while farmers, and farm managers are included in the major group Farmer, Fisherman, Lumberman and Related Worker. An accurate classification of these occupations was not always possible, as the information given on the census forms was in many cases insufficient.

Craftsman, Production Process Worker and Labourer: This major group includes skilled tradesmen and production workers, as well as semi-skilled and unskilled production workers. Apprentices and trainees are also included.

Service, Sports and Recreation Worker: This major group comprises a miscellaneous collection of persons employed in various service occupations. It includes police and prison officials, traffic inspectors; caretakers, cleaners of offices and other buildings; domestic servants, cooks, etc. in private households as well as in hotels, boarding houses, etc; waiters and barman; hairdressers and other toilet service workers; launderers; undertakers; entertainment, recreation and other sports workers.

- (iii) Economically active population: The figures given in this report in respect of the economically active population differ slightly from those given in Reports No. 1 and 2, which are based on the classification according to Industry. The difference is due largely to the fact that some visitors from overseas also specified their occupations on the census forms, and were therefore coded and included in the occupational classification as economically active. In the classification according to Industry, however, they were not included in the economically active group. A further explanation of the difference is that a certain number of persons, whose industrial classification could not be determined, were classified as not economically active in Reports No. 1 and No. 2, but were included in the economically active group when classified according to occupation. The number of these, however, is not large.

The economically active population comprises employers, employees, own-account workers and work-seekers.
