## EXPLANATORY NOTES

### 1. Changes in presentation

#### (a) *New changes*

The tables hitherto described as **Supplements to Tables P3 and P6** are to be published annually starting this year, as part (b) of the relevant tables.

**Table GG**—the female birth proportions and the illegitimate stillbirth rates have been excluded.

This volume contains a **Supplement to Table MM**—legitimate live births to remarried women, at integral marriage durations, by mother's calendar year of marriage, age at marriage and the number of her previous liveborn children. This Supplement is intended for publication only at intervals of several years.

The marriages of 1962 have been analysed by manner of solemnization in **Appendix B** of this volume. This also contains tables showing the numbers of buildings that were certified for worship and those in which marriages could lawfully be solemnized as at 30th June 1962. A similar analysis was last published in the 1957 *Statistical Review, Part II\**.

#### (b) *Changes introduced in 1961*

In **Tables A3 and H**, the divorced, previously included with the widowed, are now shown separately.

**Table F** shows the numbers of marriages in conurbations and remainders of regions.

**Table G** is published with the "age not stated" cases rateably distributed among adult ages throughout.

**Table AA** shows paternities and births by age of father.

The maternity section and the sex analysis are omitted from **Table BB** and the table now shows remainders of regions.

**Tables HH, II, KK and MM** now relate to legitimate live births instead of legitimate maternities.

The following tables or parts of tables have been suspended since 1961:

**Table LL** showing first legitimate maternities by mother's age and marriage duration.

**Table QQ** showing legitimate maternities to women married once only in respect of which the mother's age, the year of her marriage or the number of her previous liveborn children were not stated.

**Table RR** showing infertility of deceased married women by certain causes of death.

The sections of **Table TT** relating to age of mother.

### 2. Supplements to Tables

It is intended that the following supplements will be published at intervals of several years:

**Supplement to Table AA**.—Legitimate births by ages of parents in combination.

**Supplement to Table FF**.—Legitimate stillbirths per 1,000 illegitimate births by age of parents in combination.

#### **Supplements to Table HH**

1. Legitimate live births to remarried women by age of mother at birth and the number of her previous liveborn children by all husbands.
2. Legitimate births by sex, to all married women, by age of mother at birth and the number of her previous liveborn children.
3. Legitimate male births per 1,000 legitimate female births, to all married women, by age of mother at birth and the number of her previous liveborn children.

#### **Supplements to Table II**

1. Legitimate live births to remarried women, by age of mother at birth and duration of current marriage.
2. Legitimate live births to all married women, by age of mother at birth and marriage duration.

\* Published by Her Majesty's Stationery Office, now out of print.

**Supplement to Table MM**.—Legitimate live births to remarried women, by duration of current marriage (in completed years and months), age of mother at marriage and calendar year of marriage.

**Supplements to AA, FF, HH and II** were last published in 1961. The **Supplement to MM** appears in this volume and has not been previously published.

### 3. Populations

The estimates of population appearing in this volume and described as "home", "total" or "civilian" have the following content:

**Home population**—the population, of all types, actually in England and Wales, distributed by area according to residence.

**Total population**—the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *minus* the Forces of other countries temporarily in England and Wales.

**Civilian population**—the total population *minus* members of H.M. Forces belonging to England and Wales at home or overseas.

### 4. Births and birth rates

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which *occurred* during the period. The numbers *registered* in 1962 are shown in the footnote to **Table B**.

For the classification by area (**Table E**), the births have been assigned as in previous years to the home address or area of permanent residence.

The national birth rates shown in **Tables C and D** are obtained by relating birth occurrences to the total population (before 1939, birth registrations to the home population; in 1914-19, birth registrations to the total population), while the rates in **Table E** are based on birth occurrences and home populations (see Note 2 above).

### 5. Deaths and death rates

The deaths recorded (**Tables E and SS**) are the total *registered* (i.e. including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. They have been assigned to the area of usual residence of the deceased. Accommodation provided under Parts III and IV of the National Assistance Act, 1948 is regarded as the place of residence of persons dying there. Before 1st January 1958 chronic sick and psychiatric hospitals were similarly treated for this purpose but from that date the method of classification was modified, the main change being that a death in such a hospital is now assigned to the area of occurrence only if the deceased had been there six months or more. If the deceased had been there less than six months the death is transferred to the area of previous usual residence.

In some small areas the numbers of deaths may also have been appreciably affected by the *opening, closing or change of use* of certain institutions, so that figures may not be comparable with those of earlier years.

The general death rates in **Table E** are based on total deaths and home populations.

### 6. Area comparability factors

#### (a) *Births*

The crude birth rates for local areas in **Table E** (col. 8) may not be comparable one with another. In the first place, the populations on which they are based may contain different relative numbers of women of childbearing ages. In order to eliminate differences between local birth rates due to this cause an Area Comparability Factor is calculated (as described on page 30 of the 1954 *Statistical Review, Part III, Commentary\**).

In the second place, the crude birth rates for local areas may differ because disproportionate numbers of women of childbearing ages are in psychiatric hospitals for long periods, where they are not, in fact, 'exposed to risk' of childbearing. In order to eliminate differences between local birth rates due to this cause also, the Area Comparability Factors mentioned in the previous

\* Obtainable from Her Majesty's Stationery Office, price 8s. net.

paragraph are adjusted so that they also spread the number of women of childbearing ages in psychiatric hospitals over all areas of the country in proportion to the non-institutional populations.

The product of the crude birth rate and this adjusted Area Comparability Factor (col. 9 of Table E) is a rate which is standardised for sex and age structure—in particular for the relative numbers of women of childbearing ages—and, at the same time, makes allowance for the presence in or absence from the area of psychiatric hospitals with female patients of childbearing ages.

(b) *Deaths*

The crude death rates for local areas in Table E (col. 14) may not be comparable one with another. In the first place, the populations on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause an Area Comparability Factor is calculated (as described on page 57 of the 1954 *Statistical Review, Part III, Commentary\**).

In the second place the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospital in the area. In order to eliminate differences between local death rates due to this cause the above mentioned Area Comparability Factors are adjusted so that they also spread the deaths and the populations in chronic sick and psychiatric hospitals over all areas of the country in proportion to the non-institutional populations.

The product of the crude death rate and this adjusted Area Comparability Factor (col. 15 in Table E) is a rate which is standardised for sex and age structure and, at the same time, makes allowance for the presence in or absence from the area of chronic sick or psychiatric hospitals.

#### 7. Fertility analyses

All the tables that appear in the *Fertility Analyses* are based upon occurrences with the exception of Table SS which is based upon registrations.

One of the changes introduced by the part of the Population (Statistics) Act, 1960 which came into operation on 1st January 1961 was that the age of the child's father was required where his name was entered in the register, i.e. where the entry was that of a legitimate birth or of an illegitimate birth registered on the joint information of the parents.

The illegitimate births included in Table AA(b) are necessarily restricted to those registered on joint information of the parents and for which there was a statement of the age of father. Owing to the partial and possibly misrepresentative character of the information the figures have been printed in italic type.

The term "maternity" in these tables is used to denote a pregnancy which has terminated in the birth of one or more live or still born children, and the term "paternity" a legitimate pregnancy of the man's wife which has terminated in the birth of one or more live or still born children. The maternity record differs from the birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit. The definition of a stillborn child is defined in Section 41 of the Births and Deaths Registration Act, 1953 as follows: "a child which has issued forth from its mother after the twenty eighth week of pregnancy and which did not at any time after being completely expelled from the mother breathe or show any other signs of life".

The treatment of "not stated" cases is explained in Note 12.

Details of a revised series of tables, introduced in 1961, are given in Note 1.

#### 8. Divorces

The figures in Table O have been obtained from the Lord Chancellor's Department. Access to the records of the Divorce Registry has permitted the compilation of the 'P' series of tables.

#### 9. Register of electors

Table U, compiled from returns received annually from Electoral Registration Officers, shows the numbers of parliamentary electors on the February 1962 Register for each parliamentary constituency as constituted at the date of the general election held on

\* Obtainable from Her Majesty's Stationery Office, price 8s. net.

8th October 1959. The numbers of votes cast at by-elections held on the February 1962 Register have been supplied by the Home Office. The 1961 acreages, which comprise land and inland water, for each parliamentary constituency, have been obtained from the Ordnance Survey Department.

The numbers of votes cast at by-elections held during the first six weeks of the calendar year are shown in footnotes to Table U in the preceding year's volume.

Table V, which shows the numbers of local government electors and an analysis of local elections, is compiled from returns received annually from clerks to local authorities.

#### 10. Migration

Table S shows various data on balance of civilian passenger movement and migration.

Part (a) shows the balance of civilian passenger movement and relates, with certain shown exceptions, to travel by all routes to and from the United Kingdom. It has been prepared by the Board of Trade.

Part (b) which shows the balance of permanent migration, is also included in the passenger movement balance in part (a), and relates to travel by the long sea routes only. Up to and including 1960 this has also been prepared by the Board of Trade. Since 1961 this has been compiled by the General Register Office from returns received under the Merchant Shipping (Passenger Returns) Regulations, 1960.

In parts (a) and (b) the United Kingdom includes the Irish Republic prior to 1st April 1923. Inward balances are shown by a *plus* sign and outward balances by a *minus* sign.

The terms "permanent migration" and "long sea routes" have the following meaning:

*Permanent migration*—a declared intention by the passenger to reside for more than a year in the country of destination.

*Long sea routes* —all routes other than those to or from ports in Europe and the Mediterranean and Black Seas.

Prior to 1961, "long sea routes" were defined as all routes other than those to or from ports in Europe, the Mediterranean islands, all ports in Turkey and ports in Russia other than those on the Pacific coast.

Part (c) shows the intercensal population balance by migration for England and Wales. This is obtained by deducting the excess of births over deaths (the natural increase) from the intercensal increase in population. Net gains by migration are shown by a *plus* sign and net losses by a *minus* sign.

#### 11. International tables

Information for the completion of Tables W, X, Y and Z has been obtained from United Nations publications and from official sources.

#### 12. "Not stated" cases

In Table G persons who were aged 21 or over but whose exact age was not stated have been rateably distributed and included among the adult ages. The numbers so distributed are shown at the foot of the table.

In Tables AA, HH, II, MM and the Supplement to Table MM the "not stated" cases have been rateably distributed and combined with the "stated" cases. Apart from Table MM and its Supplement the number of cases so distributed have been included as notes to the relevant tables. Cases where the number of liveborn, now dead, children, was not known by the informant at the registration of the birth have not been treated as "previous children not stated" since the current level of child mortality is sufficiently low to permit it to be assumed without risk of serious error that in these cases there were no such children.

#### 13. Changes in boundaries

Areas which have undergone a change in boundary on 1st April of the current year are identified in Table E by an asterisk (\*); areas created during the year are identified by the sign †, while areas abolished are indicated by the sign ‡. Statistics shown for the year for such an area relate to the area as constituted in the respective parts of the year before and after the boundary change.

#### 14. Indication of reliability

Rates given as 0 indicate that the actual rate is less than one half of a unit. A dash (—) in any column indicates that there were no events. Where a cell has been left blank no denominator is available.

Rates based upon less than 20 events are distinguished by italic type as a warning to the user that the smallness of the experiences may affect their reliability as a measure of the underlying mortality.

#### Numbers

If  $d$  represents the deaths in an area and  $p$  the population in that area then, if  $d/p$  is small, the standard error (s.e.) of  $d$  is approximately  $\sqrt{d}$  assuming that the deaths are independent of one another. Clearly, the larger the number of deaths the smaller will be the proportionate variability. A deviation either way of twice the s.e. may be expected about once in 20 times. Using this criterion one might expect towns each averaging 20 deaths per year to yield in the same year numbers ranging between 11 and 29 without such differences having any statistical significance. Alternatively it could be said that if 20 deaths were recorded for a town, this number would have a 95 per cent confidence interval of approximately  $\pm 9$ , there being a 95 per cent chance that the underlying mortality is represented by a number of deaths within this interval.

If  $d$  is thought to be an extreme variation it would be more reliable to use as the standard error not  $\sqrt{d}$  but  $\sqrt{d'}$  where  $d'$  is the number of deaths expected if some standard rate (e.g. the national rate) were applied.

#### Rates

The appropriate standard error of a death rate when  $d$  represents the number of deaths and  $p$  the population is

$$\frac{\sqrt{d}}{p} \text{ or } \frac{m}{\sqrt{d}}$$

where  $m$  is the death rate. The difference between two local death rates  $m_1$  and  $m_2$  can only be regarded as significant if it amounts to more than twice the standard error of the difference, viz.

$$2 \sqrt{\left(\frac{m_1^2}{d_1} + \frac{m_2^2}{d_2}\right)}$$

#### Comparison of adjusted rates

Before comparisons are made, other known sources of variation (such as differences in the sex and age composition of the population) must be removed. If  $C$  is the local death Area Comparability Factor, then  $mC$  is to be compared with  $m'$ , the national death rate. The s.e. of  $mC$  is

$$C \sqrt{\left(\frac{m}{p}\right)^*}$$

and

$$mC \pm 2C \sqrt{\left(\frac{m}{p}\right)^*}$$

is to be compared with  $m'$ . As already indicated,  $m'$  can be used instead of  $m$  in the calculation of the s.e.;  $m'$  has the advantage of itself having a small sampling error.

#### 15. Abbreviations

- A.C.** administrative county (the administrative county of London consists of the City of London [including the Inner and Middle Temples] and the metropolitan boroughs).  
**C.B.** county borough.  
**M.B.** municipal borough.  
**Met. B.** metropolitan borough.  
**U.D.** urban district.  
**R.D.** rural district.

\* It is regretted that these formulae were given as  $\sqrt{\left(\frac{mC}{p}\right)}$  and  $mC \pm 2 \sqrt{\left(\frac{mC}{p}\right)}$  in previous editions of this review.

### 18. Urban and rural aggregates

Urban and rural aggregates relate to groups of local authority areas by type (all those within conurbations, urban areas, rural districts) and, in the case of urban areas, by size of their resident population as estimated at Census Day (23rd April 1961). "Urban areas" include boroughs and urban districts as defined under the Local Government Acts, and rural districts are also as defined by those Acts.

TABLE A5. Total population, projections from 30th June 1962 by sex and age

England and Wales

These projections have been prepared by the Government Actuary's Department in consultation with the General Register Office

Basis: Mid-1962 estimate of Total population of England and Wales (plus members of H.M. Forces belonging to England and Wales and serving overseas but minus the Forces of other countries temporarily in England and Wales).

Assumptions (1962 Revision):

Mortality: Death rates at the outset based on the experience in the five years 1957-61. At ages under 40, death rates are assumed to decline steadily over the period of the projection until at the end of the forty years they are one half or less of the rates now being experienced. At ages over 40 the assumed rates of decline become progressively smaller as the age advances until they vanish at ages over 90.

Natality: In view of the increased number of births registered in 1962 the assumptions made in the previous projection have been modified. The revised estimates give annual births of 853,000 in the year mid-1962 to mid-1963, an average of 870,000 a year in the next four years, and thereafter a gradual increase to 1,130,000 at the end of the century. (Male/Female ratio 1.06 throughout.)

Migration: A net inward migration from other parts of the United Kingdom and all countries overseas of 100,000 in the year mid-1962 to mid-1963; in the longer term a notional inward balance of 50,000 a year has been incorporated.

Projections involving children yet unborn are shown above the dotted line

Note: The deaths included in this table, as in all tables of the *Statistical Review*, are those which occurred in England and Wales. The numbers which occur outside England and Wales are not generally large enough to be of much significance except for certain years, e.g. for the periods 1914-18 and 1939-47 deaths of non-civilians and merchant seamen which occurred outside England and Wales are estimated at 577,000 and 240,000 respectively.

TABLE U. Parliamentary electors on the February 1962 Register, with numbers of votes cast at by-elections held thereon (shown in footnotes)

England and Wales, county and borough constituencies

- Note 1. The Register of Electors 1962 was prepared in respect of the qualifying date 10th October 1961, and came into force on 16th February 1962. The figures are for constituencies as constituted at the date of the General Election held on 8th October 1959. The figures given in columns 6, 7 and 8 relate to persons entitled to vote at elections held on or after 2nd October 1962; they are not included in columns 3, 4 and 5.
- Note 2. For constituencies whose boundaries have been altered by Orders in Council made since 8th October 1959, which become effective at the next General Election, the total electorates which will follow redefinition are shown in footnotes.
